<u>Fig. 93: Identifying Lower Column Cover And Screw</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the screw (A), then remove the lower column cover (B).

GETtheMANUALS.org

Fig. 94: Identifying Lower Column Cover And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Combination Switch Body Assembly
    1. Disconnect the connectors (A).
    2. Remove the clip (B).

Fig. 95: Identifying Combination Switch Body Assembly Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

3. Disconnect the connectors (A).

Fig. 96: Identifying Combination Switch Body Assembly Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the combination switch body assembly (A) from the steering column shaft.

Fig. 97: Identifying Combination Switch Body Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Driver's Dashboard Undercover
    1. Turn the lock knob (A) 90 °, then gently pull down the front edge of the driver's dashboard undercover (B) to detach the clip (C).
    2. Pull away the undercover to release the pin (D) from the holder (E), then remove the driver's dashboard undercover.

GETtheMANUALS.org

Fig. 98: Identifying Driver's Dashboard Undercover, Lock Knob, Holder, Clip And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Steering Joint Cover
    1. Remove the steering joint cover (A).

Fig. 99: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Steering Column Lower Slide Shaft - Hold
    1. Set the steering column to the center tilt position, and to the center telescopic position.

GETtheMANUALS.org

2. Hold the lower slide shaft (A) on the column with a piece of wire (B) between the joint yoke (C) of the lower slide shaft and the joint yoke (D) of the upper shaft to prevent the lower slider shaft from pulling out.

Fig. 100: Holding Lower Slide Shaft On Column Using Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Steering Joint - Disconnection
    1. Remove the steering joint bolt (A).
    2. Disconnect the steering joint (B) from the pinion shaft.

NOTE:

- **If the center guide (C) is in place and has not moved, leave it in place.**
- **If the center guide has come off, discard it.**

Fig. 101: Identifying Steering Joint, Center Guide And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Steering Column

GETtheMANUALS.org

1. Disconnect the connectors (A) from the ignition switch (B).

Fig. 102: Identifying Steering Column, Connectors, Ignition Switch And Wire Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Detach the wire harness clips (C) from the steering column.
3. Remove the steering column (D).

NOTE: **Do not release the lock lever until the steering column is installed. If the lock lever is released before installation, adjust the steering column after installation.**

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** , and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Steering Column
    1. Install the steering column (A).

NOTE: **Do not release the lock lever until the steering column is installed. If the lock lever is released before installation, adjust the steering column after installation.**

GETtheMANUALS.org

Fig. 103: Identifying Steering Column And Related Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Loosely tighten the attaching nuts and bolts.
3. Tighten the attaching nuts and bolts to the specified torque in the sequence shown.
4. Install the wire harness clips (B) to the steering column.
5. Connect the connectors (C) to the ignition switch (D).

2. Steering Column Lower Slide Shaft - Release
   1. Cut the wire (A).

Fig. 104: Identifying Steering Column Lower Slide Shaft And Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

3. Steering Joint - Reconnection
    1. Place the rack in the straight ahead driving position.
    2. Slip the lower end of the steering joint (A) onto the pinion shaft (B).

NOTE:

- **Pinion shaft with center guide: Install the steering joint by aligning the center guide (C).**
- **Pinion shaft without center guide: Position the steering column by aligning the gap (D) within the angle.**

Fig. 105: Identifying Steering Joint, Pinion Shaft And Center Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Align the bolt hole (A) on the steering joint with the groove (B) around the pinion shaft.
    4. Loosely install the steering joint bolt (C).
    5. Be sure that the joint bolt is securely in the groove in the pinion shaft.
    6. Pull on the steering joint to make sure that the steering joint is fully seated.
    7. Tighten the steering joint bolt to the specified torque.

GETtheMANUALS.org

Fig. 106: Identifying Pinion Shaft Groove, Steering Joint Bolt And Bolt Hole With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Steering Joint Cover
    1. Install the steering joint cover (A).

Fig. 107: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Driver's Dashboard Undercover
    1. Install the driver's dashboard undercover (A). Make sure the clip (B) snap into place securely, and the pin (C) into the holder (D) securely.
    2. Turn the lock knob (E) 90 °.

GETtheMANUALS.org

Fig. 108: Identifying Driver's Dashboard Undercover, Lock Knob, Holder, Pin And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Combination Switch Body Assembly
    1. Install the combination switch body assembly (A).
    2. Tighten three screws (B) in the sequence shown.

Fig. 109: Identifying Combination Switch Body Assembly Mounting Screws Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the connectors (A).

GETtheMANUALS.org

Fig. 110: Identifying Combination Switch Body Assembly Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Connect the connectors (A).
5. Install the clip (B).

Fig. 111: Identifying Combination Switch Body Assembly Connectors And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Lower Column Cover
    1. Push in on the lower column cover just above ignition switch opening (A) to engage the column cover with the locking tab (B).

GETtheMANUALS.org

Fig. 112: Engaging Column Cover With Lock Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the lower column cover (A), then install the screw (B).

Fig. 113: Identifying Lower Column Cover And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screws (A) securing the lower column cover (B) from the front side.

GETtheMANUALS.org

Fig. 114: Identifying Lower Column Cover And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Upper Column Cover
    1. Install the upper column cover (A).

Fig. 115: Identifying Upper Column Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the dashboard meter visor blind cover (A). Make sure the clips (B) and the hook (C) snap into place securely.

GETtheMANUALS.org

Fig. 116: Identifying Dashboard Meter Visor Blind Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Steering Wheel Assembly
    1. Make sure the front wheels are pointing straight ahead.
    2. Center the cable reel (A). Do this by first rotating the cable reel clockwise until it stops.
    3. Rotate the cable reel counterclockwise about three full turns. The arrow mark (B) on the cable reel label should point straight up.

Fig. 117: Identifying Cable Reel With Arrow Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Position the steering wheel hub (A) so that it engages the pin (B) of the cable reel.

GETtheMANUALS.org

5. Install the steering wheel (C) on to the steering column shaft.

NOTE: **Do not tap on the steering wheel or the steering column shaft when installing the steering wheel.**

Fig. 118: Identifying Steering Wheel, Hub And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the steering wheel bolt (A), and tighten it to the specified torque.
7. Connect the connector (B).
8. Make sure the wire harness is routed and fastened properly.

Fig. 119: Identifying Steering Wheel Bolt And Connector With Torque Specifications

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Driver's Airbag

NOTE: **If you are replacing a deployed driver's airbag, inspect the cable reel for heat damage. If there is any damage, replace the cable reel.**

1. Place the driver's airbag (A) in the steering wheel.
2. Tighten the new TORX bolts using a TORX T30 bit.

NOTE: **Make sure the clearance (B) between the steering wheel and the horn pad is the specified value.**

Fig. 120: Identifying Driver Airbag With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Fig. 121: Identifying Clearance Between Steering Wheel And Horn Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the driver's airbag inflator connector (A) on the cable reel harness.
4. Connect the horn switch connector (B).

NOTE: **After reconnecting the negative cable to the battery, make sure the horn works properly.**

5. Install the access panel (C).

Fig. 122: Identifying Driver Airbag Inflator Connector, Horn Switch Connector And Access Panel

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 123: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Steering After Install - Check
    1. After installation, check these items:
        - Start the engine, allow it to idle, and turn the steering wheel from lock to lock several times.
        - Check that the EPS indicator does not come on.
        - Check the steering wheel spoke angle. If steering spoke angles to the right and left are not equal (steering wheel and rack are not centered), correct the engagement of the joint/pinion shaft splines.
13. Pre-Alignment Checks

For proper inspection and adjustment of the wheel alignment, do these checks:

GETtheMANUALS.org

1. Release the parking brake to avoid an incorrect measurement.
2. Make sure the suspension is not modified.
3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
4. Check the tire size and tire pressure according to tire information.
5. Set the steering column to the middle tilt position and telescopic position.

14. Front Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Set the steering column to the middle tilt position and telescopic positions.
2. Center the steering wheel spokes, and install a steering wheel holder tool.
3. Check the toe with the wheels pointed straight ahead.

Front toe-in: 0±2 mm (0±0.08 in)

- If adjustment is required, go to the front toe adjustment.
- If no adjustment is required, remove the alignment equipment.

15. HDS DLC - Connection

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 124: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

16. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

17. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

STEERING GEARBOX MOUNT CUSHION REPLACEMENT

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number

GETtheMANUALS.org

	Ball Joint Remover, 28 mm 07MAC-SL00202
	Ball Joint Thread Protector, 12 mm 07AAF-SDAA100
	Subframe Adapter VSB02C000016(1)

GETtheMANUALS.org

	
	Subframe Alignment Pin 070AG-SJAA10S
(1) Available through the Honda Tool and Equipment Program 888-424-6857	

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel - Both Side
    1. Remove both front wheels.

GETtheMANUALS.org

Fig. 127: Identifying Front Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Steering Joint Cover
    1. Remove the steering joint cover (A).

Fig. 128: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Steering Column Lower Slide Shaft - Hold
    1. Set the steering column to the center tilt position, and to the center telescopic position.
    2. Hold the lower slide shaft (A) on the column with a piece of wire (B) between the joint yoke (C) of the lower slide shaft and the joint yoke (D) of the upper shaft to prevent the lower slider shaft from pulling out.

GETtheMANUALS.org

Fig. 129: Holding Lower Slide Shaft On Column Using Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Steering Wheel Hold
    1. Center the steering wheel spoke angle.
    2. Install a commercially available steering wheel holder tool (A).

Fig. 130: Installing Steering Wheel Holder Tool On Steering Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Steering Joint - Disconnection
    1. Remove the steering joint bolt (A).
    2. Disconnect the steering joint (B) from the pinion shaft.
    3. Remove the center guide (C) (if equipped), and discard it.

GETtheMANUALS.org

Fig. 131: Identifying Steering Joint, Center Guide And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Ball Joint - Removal

NOTE: **Always use a ball joint remover to disconnect a ball joint. Do not strike the housing or any other part of the ball joint connection to disconnect it.**

1. Install a hex nut (A) or the ball joint thread protector.

NOTE: **When using a hex nut, make sure the nut is flush with the ball joint pin end to prevent damage to the threaded end of the ball joint pin.**

Fig. 132: Identifying Hex Nut Or Ball Joint Thread Protector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply grease to the ball joint remover on the areas shown (A).

GETtheMANUALS.org

Fig. 133: Identifying Grease Applying Areas On Ball Joint Remover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the ball joint remover as shown.

NOTE:

- **Fasten the safety tie (A) securely to a suspension arm or the subframe (B).**
- **Making sure not to damage the ball joint boot.**

4. Tighten the pressure bolt until the ball joint pin pops loose from the ball joint connecting hole.

NOTE: **Do not use pneumatic or electric tools on the pressure bolt.**

5. Remove the ball joint remover.
6. Remove the hex nut or the ball joint thread protector.
7. Pull the ball joint out of the ball joint connecting hole.

GETtheMANUALS.org

Fig. 134: Fastening Safety Tie On Suspension Arm Or Subframe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Tie-Rod End Ball Joint - Disconnection, Both Side
    1. Remove the cotter pin (A) from the tie-rod end ball joint.
    2. Remove the nut (B).
    3. Disconnect the tie-rod end ball joint.

NOTE: **Be careful not to damage the ball joint boot when installing the remover.**

Fig. 135: Identifying Tie-Rod End Ball Joint Cotter Pin And Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Stabilizer Link Stabilizer Bar Side - Disconnection, Both Side

GETtheMANUALS.org

1. Remove the flange nuts (A) while holding the respective joint pin (B) with a hex wrench (C).
2. Disconnect both sides of the stabilizer link (D) from the front stabilizer bar (E).

Fig. 136: Removing Flange Nuts Using Hex Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

GETtheMANUALS.org

Fig. 137: Identifying Front Bumper, Front Splash Shield, Bolt And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Floor Undercover
    1. Remove the bolts (A) and the clips (B, C) securing the front floor undercover (D), then remove the front floor undercover.

GETtheMANUALS.org

Fig. 138: Identifying Front Floor Undercover, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Under-Floor TWC Assembly
    1. Remove the under-floor TWC.

Fig. 139: Identifying Under-Floor TWC
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

13. Left Middle Floor Undercover (AWD/4WD)
    1. Remove the bolts (A) and clips (B, C), then remove the left middle floor undercover (D).

Fig. 140: Identifying Left Middle Floor Undercover, Clips And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Propeller Shaft Protector No. 1 (AWD/4WD)
    1. Remove the No. 1 propeller shaft protector (A).

GETtheMANUALS.org

Fig. 141: Identifying Propeller Shaft Protector (No. 1)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Propeller Shaft Protector No. 2 (AWD/4WD)
    1. Remove the No. 2 propeller shaft protector (A).

Fig. 142: Identifying Propeller Shaft Protector (No. 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Propeller Shaft Transmission Side - Disconnection (AWD/4WD)
    1. Make reference mark (A) across the No. 1 propeller shaft (B) and the transfer companion flange (C).
    2. Remove the No. 1 propeller shaft flange bolts (D).

GETtheMANUALS.org

Fig. 143: Identifying Transfer Companion Flange, Propeller Shaft And Flange Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Propeller Shaft Differential Side - Disconnection (AWD/4WD)
    1. Make reference mark (A) across the No. 2 propeller shaft (B) and the rear differential companion flange (C).
    2. Remove the No. 2 propeller shaft flange bolts (D).

Fig. 144: Identifying Rear Companion Flange, Propeller Shaft And Flange Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Propeller Shaft Assembly (AWD/4WD)
    1. Remove the center support bearing mounting bolts (A), then remove the propeller shaft assembly (B).

GETtheMANUALS.org

Fig. 145: Identifying Propeller Shaft Assembly And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Power Steering Gearbox Items

NOTE: Wrap the connectors with vinyl tape to avoid contamination from grease or water.

1. Disconnect the EPS motor 3P connector (A) by pushing the lock (B) and pulling up the lever (C).
2. Disconnect the connectors (D).
3. Remove the harness clip (E).

Fig. 146: Disconnecting EPS Motor 3P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

4. Remove the steering gearbox mounting bolts (A).
5. Remove the stiffener mounting bolts (B).
6. Remove the steering gearbox stiffeners (C).

Driver's side

Fig. 147: Identifying Steering Gearbox Stiffeners And Mounting Bolts (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's side

GETtheMANUALS.org

Fig. 148: Identifying Steering Gearbox Stiffeners And Mounting Bolts (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Subframe Support
    1. Attach the subframe adapter (A) to the front subframe by looping the belt (B) over the front of the front subframe (C), then secure the belt with its stop (D).
    2. Raise the jack and line up the slots in the subframe adapter arms with the bolt holes on the jack base, then securely attach them with four bolts.

Fig. 149: Attaching Subframe Adapter To Front Subframe By Looping Belt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Lower Torque Rod - Disconnection
    1. Remove the lower torque rod mount mounting bolts (A).

GETtheMANUALS.org

Fig. 150: Identifying Lower Torque Rod Mount Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Front Subframe - Move
    1. Remove the mid mounting bolts (A) on both sides.

Fig. 151: Identifying Mid Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Loosen the front subframe mounting bolts (A) so they are about 30 mm (1.18 in) from the mounting surface on both sides.

NOTE: **Do not loosen the front subframe mounting bolts more than necessary.**

GETtheMANUALS.org

Fig. 152: Identifying Front Subframe Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the front subframe mounting bolts (A) on both side.
4. Lower the jack slowly until the front subframe has dropped about 130 mm (5.12 in).

Fig. 153: Identifying Front Subframe Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Pinion Shaft Grommet
    1. Remove the pinion shaft grommet (A).
    2. Wrap vinyl tape over the splines on the pinion shaft (B).

GETtheMANUALS.org

Fig. 154: Identifying Pinion Shaft And Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Power Steering Gearbox Assembly
    1. Move the steering gearbox to the driver's side, and rotate it so the pinion shaft (A) points toward the rear of the vehicle.
    2. Carefully move the steering gearbox (B) as an assembly toward the driver's side of the vehicle until the pinion shaft clears the wheelwell opening.
    3. Remove the steering gearbox through the wheelwell opening on the driver's side.

Fig. 155: Removing Steering Gearbox
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Steering Gearbox Mount Cushion
    1. Position a 41 mm socket (A) on the flange part of the gearbox housing with a washer (B), a 10 x

GETtheMANUALS.org

105 mm flange bolt (C), and a 10 mm nut (D) as shown.

2. Hold the flange bolt with a wrench, and tighten the nut with a wrench. Remove the gearbox mount cushion (E).

Fig. 156: Identifying Steering Gearbox Mount Cushion And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Steering Gearbox Mount Cushion
    1. Apply a mild soap and water solution to the new gearbox mount cushion surface (A), then place mount cushion on the gearbox mounting cushion hole.
    2. Position the 41 mm socket on the flange part of the gearbox housing with a washer, a flange bolt, and a nut as shown.
    3. Install the gearbox mount cushion by tightening the nut until the mount cushion edges (B) properly fit on the gearbox flange surface (C).

GETtheMANUALS.org

Fig. 157: Identifying Steering Gearbox Mount Cushion And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Power Steering Gearbox Assembly
    1. Apply vinyl tape to the splines on the pinion shaft (A).
    2. Slide the steering gearbox (B) between the front subframe and body from the driver's side.
    3. Carefully move the steering gearbox toward the passenger's side until the pinion shaft clears the wheelwell opening on the body.
    4. Rotate the steering gearbox so the pinion shaft points upward.
    5. Continue moving the steering gearbox toward the passenger's side until the steering gearbox is in position.

GETtheMANUALS.org

Fig. 158: Rotating Steering Gearbox
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pinion Shaft Grommet
    1. Remove the vinyl tape (A) from pinion shaft.
    2. Install the pinion shaft grommet (B).
    3. Align the lug portion (C) in the pinion shaft grommet with the cutout portion (D) on the steering gearbox.

Fig. 159: Identifying Pinion Shaft Grommet, Lug Portion, Cutout Portion And Vinyl Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Subframe - Move
    1. Turn the lip (A) of the pinion shaft grommet.
    2. Lift the front subframe (B) up to the body, then restore the pinion shaft grommet back to proper position.

NOTE: **Be sure that the pinion shaft grommet is securely in place. Make sure the lip of the pinion shaft grommet is not turned up. Incorrect installation can cause leakage of water and mud, or noise.**

GETtheMANUALS.org

Fig. 160: Lifting Front Subframe Up To Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Loosely install the new front subframe mounting bolts (A).

Fig. 161: Identifying Front Subframe Mounting Bolts With Torque Specifications (1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Fig. 162: Identifying Front Subframe Mounting Bolts With Torque Specifications (2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Loosely install the mid mounting bolts (A).

Fig. 163: Identifying Mid Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Subframe - Alignment

NOTE:

- **Align the front subframe in the following sequence.**
- **When Installing, align both installation reference holes in the subframe with both reference holes in the body using the subframe alignment pin.**

1. Insert the subframe alignment pin (A) through the positioning hole (B) on the right rear subframe, and into the positioning hole (C) on the body, then loosely tighten the subframe right rear mounting bolts.

GETtheMANUALS.org

Fig. 164: Inserting Subframe Alignment Pin Into Right Rear Subframe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the subframe alignment pin through the positioning hole on the left rear subframe, and into the positioning hole on the body, then loosely tighten the subframe left rear mounting bolts.
3. Tighten the subframe mounting bolts to the specified torque values starting with the right rear subframe mounting bolt. Use the subframe alignment pin when tightening the rear side subframe mounting bolts.
4. Check all of the subframe mounting bolts, and retighten if necessary.

NOTE: Tighten the bolts in the sequence shown.

5. Tighten the mid mounting bolts to the specified torque.
6. Lower the transmission jack supporting the subframe.

6. Lower Torque Rod - Reconnection
   1. Loosely install the new lower torque rod mounting bolts (A).

GETtheMANUALS.org

Fig. 165: Identifying Lower Torque Rod Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Lower Torque Rod Mounting Bolt - Tighten
    1. Loosen the lower torque mount mounting bolt.
    2. Tighten the lower torque rod mount mounting bolts in the numbered sequence shown.

Fig. 166: Identifying Lower Torque Rod Mount Mounting Bolts Tightening Sequence With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Power Steering Gearbox Items
    1. Install the steering gearbox stiffeners (A).
    2. Loosely tighten the steering gearbox mounting bolts (B).
    3. Loosely tighten the stiffener mounting bolts (C).
    4. Tighten the steering gearbox mounting bolts and the stiffener mounting bolts to the specified torque

GETtheMANUALS.org

in the sequence shown.

Driver's side

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's side

Fig. 168: Identifying Steering Gearbox Stiffeners With Torque Specifications (Passenger Side)

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the harness clip (A).
6. Pull down the lever (B) of the EPS motor 3P connector (C), then confirm the connector is fully seated.
7. Connect the Connectors (D).

Fig. 169: Pulling Lever Of EPS Motor 3P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Propeller Shaft Assembly (AWD/4WD)
    1. Install the propeller shaft assembly (A), then Install new center support bearing mounting bolts (B).

Fig. 170: Identifying Propeller Shaft Assembly

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Propeller Shaft Differential Side - Reconnection (AWD/4WD)
    1. Set the No. 2 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference mark (C) you made during the removal procedure.
    2. Install new No. 2 propeller shaft flange bolts (D) to the specified torque.

Fig. 171: Identifying Rear Differential Companion Flange, Propeller Shaft And Flange Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Propeller Shaft Transmission Side - Reconnection (AWD/4WD)
    1. Set the No. 1 propeller shaft (A) to the transfer companion flange (B) by aligning the reference mark (C) you made during the removal procedure.
    2. Install new No. 1 propeller shaft flange bolts (D) to the specified torque.

GETtheMANUALS.org

Fig. 172: Identifying Transfer Companion Flange, Propeller Shaft And Flange Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Propeller Shaft Protector No. 2 (AWD/4WD)
    1. Install the No. 2 propeller shaft protector (A).

Fig. 173: Identifying Propeller Shaft Protector (No. 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Propeller Shaft Protector No. 1 (AWD/4WD)
    1. Install the No. 1 propeller shaft protector (A).

GETtheMANUALS.org

Fig. 174: Identifying Propeller Shaft Protector (No. 1)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Left Middle Floor Undercover (AWD/4WD)
    1. Install the left middle floor undercover (A), then install the bolts (B) and the clips (C, D). The clips snap into place securely.

GETtheMANUALS.org

Fig. 175: Identifying Left Middle Floor Undercover, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Under Floor TWC Assembly
    1. Install the under-floor TWC.

Fig. 176: Identifying Under-Floor TWC With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Front Floor Undercover
    1. Install the front floor undercover (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

GETtheMANUALS.org

Fig. 177: Identifying Front Floor Undercover, Bolts And Clips With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

GETtheMANUALS.org

Fig. 178: Identifying Front Splash Shield, Bolts And Clips With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Front Stabilizer Link Stabilizer Bar Side - Reconnection, Both Side
    1. Connect both sides of the stabilizer link (A) to the front stabilizer bar (B).
    2. Install the flange nuts (C), and tighten them to the specified torque while holding the respective joint pin (D) with a hex wrench (E).

GETtheMANUALS.org

Fig. 179: Installing Front Stabilizer Link Stabilizer Bar Side
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Tie-Rod End Ball Joint - Connection, Both Side
    1. Wipe off any grease contamination from the ball joint tapered section and threads.
    2. Connect the tie-rod ball joint (A) to the knuckle.
    3. Install the nut (B) and tighten to the specified torque.
    4. Install a new cotter pin (C).

NOTE: **Bend the cotter pin as shown.**

GETtheMANUALS.org

Fig. 180: Identifying Tie-Rod Ball Joint, Cotter Pin And Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Steering Column Lower Slide Shaft - Release
    1. Cut the wire (A).

Fig. 181: Identifying Steering Column Lower Slide Shaft And Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Steering Wheel Release
    1. Remove the steering wheel holder tool (A).

GETtheMANUALS.org

Fig. 182: Identifying Steering Wheel Holder Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Steering Joint - Reconnection
    1. Place the rack in the straight ahead driving position.
    2. Slip the lower end of the steering joint (A) onto the pinion shaft (B).

NOTE: Position the steering column by aligning the gap (C) within the angle.

Fig. 183: Installing Lower End Of Steering Joint Onto Pinion Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Align the bolt hole (A) on the steering joint with the groove (B) around the pinion shaft.
    4. Loosely install the steering joint bolt (C).
    5. Be sure that the joint bolt is securely in the groove in the pinion shaft.
    6. Pull on the steering joint to make sure that the steering joint is fully seated.

GETtheMANUALS.org

7. Tighten the steering joint bolt to the specified torque.

Fig. 184: Identifying Pinion Shaft Groove, Steering Joint Bolt And Bolt Hole With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Steering Joint Cover
    1. Install the steering joint cover (A).

Fig. 185: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Front Wheel - Both Side
    1. Install both front wheels.

GETtheMANUALS.org

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 186: Identifying Front Wheel With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Battery Terminal (SRS) - Reconnection

NOTE: **If the battery performance is abnormal, test the battery.**

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: **Always connect the positive side first.**

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

GETtheMANUALS.org

Fig. 187: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Steering Gearbox - After Install Symptom Check
    1. With the tires raised off the ground, check for the following symptoms by turning the steering wheel fully to the right and left several times.

Symptom	Probable cause
Rubbing sound coming from the lower steering column area.	Steering column joint is contacting the cover.
Grating sound from the lower steering column area, or a rough feeling during steering.	Poor engagement of the pinion shaft serrations.
Noise from around the steering wheel during steering.	Poor engagement of the SRS cable reel with the steering wheel, or a damaged cable reel.

27. Steering After Install - Check
    1. After installation, check these items:
        - Start the engine, allow it to idle, and turn the steering wheel from lock to lock several times.
        - Check that the EPS indicator does not come on.
        - Check the steering wheel spoke angle. If steering spoke angles to the right and left are not equal (steering wheel and rack are not centered), correct the engagement of the joint/pinion shaft splines.
28. Pre-Alignment Checks

    For proper inspection and adjustment of the wheel alignment, do these checks:

    1. Release the parking brake to avoid an incorrect measurement.
    2. Make sure the suspension is not modified.

GETtheMANUALS.org

3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
4. Check the tire size and tire pressure according to tire information.
5. Set the steering column to the middle tilt position and telescopic position.

29. Caster - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Check the caster angle.

   Caster angle:

   2WD:

   With 16 inch wheel: 2 ° 44 '±30 '

   Without 16 inch wheel: 2 ° 50 '±30 '

   AWD/4WD:

   With 16 inch wheel: 2 ° 38 '±30 '

   Without 16 inch wheel: 2 ° 44 '±30 '

   - If the measurement is within specifications, measure the front camber angle.
   - If the measurement is not within specifications, check for bent or damaged suspension components.

30. Camber - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Check the camber angle.

   Camber angle:

   2WD:

   Front:

   With 16 inch wheel: -0 ° 01 '±1 ° 00 '

   Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

   (Maximum difference between the front right and left side: 1 °00 ')

GETtheMANUALS.org

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

31. Front Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Set the steering column to the middle tilt position and telescopic positions.
2. Center the steering wheel spokes, and install a steering wheel holder tool.
3. Check the toe with the wheels pointed straight ahead.

Front toe-in: 0±2 mm (0±0.08 in)

- If adjustment is required, go to the front toe adjustment.
- If no adjustment is required, remove the alignment equipment.

32. Turning Angle - Inspection

GETtheMANUALS.org

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Turn the wheel right and left while applying the brake, and measure the turning angle of both wheels.

   Turning angle:

   2WD:

   Inward:

   With 16 inch wheel: 36 ° 29 '±2 °

   Without 16 inch wheel: 36 ° 13 '±2 °

   Outward (reference):

   With 16 inch wheel: 31 ° 13 '

   Without 16 inch wheel: 31 ° 02 '

   AWD/4WD:

   Inward:

   With 16 inch wheel: 36 ° 48 '±2 °

   Without 16 inch wheel: 36 ° 30 '±2 °

   Outward (reference):

   With 16 inch wheel: 31 ° 18 '

   Without 16 inch wheel: 31 ° 12 '

GETtheMANUALS.org

Fig. 188: Measuring Turning Angle Of Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If the measurement is not within the specifications, even up both sides of the tie-rod threaded section length while adjusting the front toe.
3. If it is correct, but the turning angle is not within the specifications, check for bent or damaged suspension components.

33. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 189: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

34. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

35. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

STEERING GEARBOX REMOVAL AND INSTALLATION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Ball Joint Remover, 28 mm 07MAC-SL00202
	Ball Joint Thread Protector, 12 mm 07AAF-

GETtheMANUALS.org

	SDAA100
	Subframe Adapter VSB02C000016(1)
	Subframe Alignment Pin 070AG-SJAA10S

GETtheMANUALS.org

	
(1) Available through the Honda Tool and Equipment Program 888-424-6857	

REMOVAL

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 190: Identifying Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.

GETtheMANUALS.org

3. Front Wheel - Both Side
    1. Remove both front wheels.

Fig. 191: Identifying Front Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Steering Joint Cover
    1. Remove the steering joint cover (A).

Fig. 192: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Steering Column Lower Slide Shaft - Hold
    1. Set the steering column to the center tilt position, and to the center telescopic position.
    2. Hold the lower slide shaft (A) on the column with a piece of wire (B) between the joint yoke (C) of the lower slide shaft and the joint yoke (D) of the upper shaft to prevent the lower slider shaft from pulling out.

GETtheMANUALS.org

Fig. 193: Holding Lower Slide Shaft On Column Using Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Steering Wheel Hold
    1. Center the steering wheel spoke angle.
    2. Install a commercially available steering wheel holder tool (A).

Fig. 194: Identifying Lower Slide Shaft, Wire And Yoke Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Steering Joint - Disconnection
    1. Remove the steering joint bolt (A).
    2. Disconnect the steering joint (B) from the pinion shaft.
    3. Remove the center guide (C) (if equipped), and discard it.

GETtheMANUALS.org

Fig. 195: Identifying Steering Joint, Center Guide And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Ball Joint - Removal

NOTE: **Always use a ball joint remover to disconnect a ball joint. Do not strike the housing or any other part of the ball joint connection to disconnect it.**

1. Install a hex nut (A) or the ball joint thread protector.

NOTE: **When using a hex nut, make sure the nut is flush with the ball joint pin end to prevent damage to the threaded end of the ball joint pin.**

Fig. 196: Identifying Hex Nut Or Ball Joint Thread Protector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply grease to the ball joint remover on the areas shown (A).

GETtheMANUALS.org

Fig. 197: Identifying Grease Applying Areas On Ball Joint Remover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the ball joint remover as shown.

NOTE:

- **Fasten the safety tie (A) securely to a suspension arm or the subframe (B).**
- **Making sure not to damage the ball joint boot.**

4. Tighten the pressure bolt until the ball joint pin pops loose from the ball joint connecting hole.

NOTE: **Do not use pneumatic or electric tools on the pressure bolt.**

5. Remove the ball joint remover.
6. Remove the hex nut or the ball joint thread protector.
7. Pull the ball joint out of the ball joint connecting hole.

GETtheMANUALS.org

Fig. 198: Fastening Safety Tie On Suspension Arm Or Subframe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Tie-Rod End Ball Joint - Disconnection, Both Side
    1. Remove the cotter pin (A) from the tie-rod end ball joint.
    2. Remove the nut (B).
    3. Disconnect the tie-rod end ball joint.

NOTE: **Be careful not to damage the ball joint boot when installing the remover.**

Fig. 199: Identifying Tie-Rod End Ball Joint Cotter Pin And Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Front Stabilizer Link Stabilizer Bar Side - Disconnection, Both Side

GETtheMANUALS.org

1. Remove the flange nuts (A) while holding the respective joint pin (B) with a hex wrench (C).
2. Disconnect both sides of the stabilizer link (D) from the front stabilizer bar (E).

Fig. 200: Removing Flange Nuts Using Hex Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Splash Shield
    1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
    2. From under the front bumper (D), remove the clips (E).
    3. From under the body, remove the clips (F), then pull out the front splash shield.

GETtheMANUALS.org

Fig. 201: Identifying Front Bumper, Front Splash Shield, Bolt And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Front Floor Undercover
    1. Remove the bolts (A) and the clips (B, C) securing the front floor undercover (D), then remove the front floor undercover.

GETtheMANUALS.org

Fig. 202: Identifying Front Floor Undercover, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Under-Floor TWC Assembly
    1. Remove the under-floor TWC.

Fig. 203: Identifying Under-Floor TWC
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

14. Left Middle Floor Undercover (AWD/4WD)
    1. Remove the bolts (A) and clips (B, C), then remove the left middle floor undercover (D).

Fig. 204: Identifying Left Middle Floor Undercover, Clips And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Propeller Shaft Protector No. 1 (AWD/4WD)
    1. Remove the No. 1 propeller shaft protector (A).

GETtheMANUALS.org

Fig. 205: Identifying Propeller Shaft Protector (No. 1)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Propeller Shaft Protector No. 2 (AWD/4WD)
    1. Remove the No. 2 propeller shaft protector (A).

Fig. 206: Identifying Propeller Shaft Protector (No. 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Propeller Shaft Transmission Side - Disconnection (AWD/4WD)
    1. Make reference mark (A) across the No. 1 propeller shaft (B) and the transfer companion flange (C).
    2. Remove the No. 1 propeller shaft flange bolts (D).

GETtheMANUALS.org

Fig. 207: Identifying Transfer Companion Flange, Propeller Shaft And Flange Bolt With Reference Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Propeller Shaft Differential Side - Disconnection (AWD/4WD)
    1. Make reference mark (A) across the No. 2 propeller shaft (B) and the rear differential companion flange (C).
    2. Remove the No. 2 propeller shaft flange bolts (D).

Fig. 208: Identifying Rear Differential Flange, Propeller Shaft And Flange Bolt With Reference Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Propeller Shaft Assembly (AWD/4WD)
    1. Remove the center support bearing mounting bolts (A), then remove the propeller shaft assembly (B).

GETtheMANUALS.org

Fig. 209: Identifying Propeller Shaft Assembly And Center Support Bearing Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Power Steering Gearbox Items

NOTE: Wrap the connectors with vinyl tape to avoid contamination from grease or water.

1. Disconnect the EPS motor 3P connector (A) by pushing the lock (B) and pulling up the lever (C).
2. Disconnect the connectors (D).
3. Remove the harness clip (E).

Fig. 210: Disconnecting EPS Motor 3P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

4. Remove the steering gearbox mounting bolts (A).
5. Remove the stiffener mounting bolts (B).
6. Remove the steering gearbox stiffeners (C).

Driver's side

Fig. 211: Identifying Steering Gearbox Stiffeners And Mounting Bolts (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's side

GETtheMANUALS.org

Fig. 212: Identifying Steering Gearbox Stiffeners And Mounting Bolts (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Subframe Support
    1. Attach the subframe adapter (A) to the front subframe by looping the belt (B) over the front of the front subframe (C), then secure the belt with its stop (D).
    2. Raise the jack and line up the slots in the subframe adapter arms with the bolt holes on the jack base, then securely attach them with four bolts.

Fig. 213: Attaching Subframe Adapter To Front Subframe By Looping Belt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Lower Torque Rod - Disconnection
    1. Remove the lower torque rod mount mounting bolts (A).

GETtheMANUALS.org

Fig. 214: Identifying Lower Torque Rod Mount Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Front Subframe - Move
    1. Remove the mid mounting bolts (A) on both sides.

Fig. 215: Identifying Mid Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Loosen the front subframe mounting bolts (A) so they are about 30 mm (1.18 in) from the mounting surface on both sides.

NOTE: **Do not loosen the front subframe mounting bolts more than necessary.**

GETtheMANUALS.org

Fig. 216: Identifying Front Subframe Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the front subframe mounting bolts (A) on both side.
4. Lower the jack slowly until the front subframe has dropped about 130 mm (5.12 in).

Fig. 217: Identifying Front Subframe Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Pinion Shaft Grommet
    1. Remove the pinion shaft grommet (A).
    2. Wrap vinyl tape over the splines on the pinion shaft (B).

GETtheMANUALS.org

Fig. 218: Identifying Pinion Shaft And Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Power Steering Gearbox Assembly
    1. Move the steering gearbox to the driver's side, and rotate it so the pinion shaft (A) points toward the rear of the vehicle.
    2. Carefully move the steering gearbox (B) as an assembly toward the driver's side of the vehicle until the pinion shaft clears the wheelwell opening.
    3. Remove the steering gearbox through the wheelwell opening on the driver's side.

Fig. 219: Removing Steering Gearbox
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Power Steering Heat Shield
    1. Remove the heat shield (A).

GETtheMANUALS.org

Fig. 220: Identifying Heat Shield
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Power Steering Heat Shield
    1. Install the heat shield (A).

Fig. 221: Identifying Heat Shield With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Power Steering Gearbox Assembly
    1. Apply vinyl tape to the splines on the pinion shaft (A).
    2. Slide the steering gearbox (B) between the front subframe and body from the driver's side.
    3. Carefully move the steering gearbox toward the passenger's side until the pinion shaft clears the wheelwell opening on the body.
    4. Rotate the steering gearbox so the pinion shaft points upward.
    5. Continue moving the steering gearbox toward the passenger's side until the steering gearbox is in position.

GETtheMANUALS.org

Fig. 222: Rotating Steering Gearbox
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pinion Shaft Grommet
    1. Remove the vinyl tape (A) from pinion shaft.
    2. Install the pinion shaft grommet (B).
    3. Align the lug portion (C) in the pinion shaft grommet with the cutout portion (D) on the steering gearbox.

Fig. 223: Identifying Pinion Shaft Grommet, Lug Portion, Cutout Portion And Vinyl Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Subframe - Move
    1. Turn the lip (A) of the pinion shaft grommet.

GETtheMANUALS.org

2. Lift the front subframe (B) up to the body, then restore the pinion shaft grommet back to proper position.

NOTE: **Be sure that the pinion shaft grommet is securely in place. Make sure the lip of the pinion shaft grommet is not turned up. Incorrect installation can cause leakage of water and mud, or noise.**

Fig. 224: Lifting Front Subframe Up To Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Loosely install the new front subframe mounting bolts (A).

Fig. 225: Identifying Front Subframe Mounting Bolts With Torque Specifications (1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Fig. 226: Identifying Front Subframe Mounting Bolts With Torque Specifications (2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Loosely install the mid mounting bolts (A).

Fig. 227: Identifying Mid Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Subframe - Alignment

NOTE:

- **Align the front subframe in the following sequence.**
- **When Installing, align both installation reference holes in the subframe with both reference holes in the body using the subframe alignment pin.**

1. Insert the subframe alignment pin (A) through the positioning hole (B) on the right rear subframe, and into the positioning hole (C) on the body, then loosely tighten the subframe right rear mounting bolts.

GETtheMANUALS.org

Fig. 228: Inserting Subframe Alignment Pin Into Right Rear Subframe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the subframe alignment pin through the positioning hole on the left rear subframe, and into the positioning hole on the body, then loosely tighten the subframe left rear mounting bolts.
3. Tighten the subframe mounting bolts to the specified torque values starting with the right rear subframe mounting bolt. Use the subframe alignment pin when tightening the rear side subframe mounting bolts.
4. Check all of the subframe mounting bolts, and retighten if necessary.

NOTE: Tighten the bolts in the sequence shown.

5. Tighten the mid mounting bolts to the specified torque.
6. Lower the transmission jack supporting the subframe.

6. Lower Torque Rod - Reconnection
   1. Loosely install the new lower torque rod mounting bolts (A).

GETtheMANUALS.org

Fig. 229: Identifying Lower Torque Rod Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Lower Torque Rod Mounting Bolt - Tighten
    1. Loosen the lower torque mount mounting bolt.
    2. Tighten the lower torque rod mount mounting bolts in the numbered sequence shown.

Fig. 230: Identifying Lower Torque Rod Mount Mounting Bolts Tightening Sequence With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Power Steering Gearbox Items
    1. Install the steering gearbox stiffeners (A).
    2. Loosely tighten the steering gearbox mounting bolts (B).
    3. Loosely tighten the stiffener mounting bolts (C).
    4. Tighten the steering gearbox mounting bolts and the stiffener mounting bolts to the specified torque

GETtheMANUALS.org

in the sequence shown.

Driver's side

Passenger's side

Fig. 232: Identifying Steering Gearbox Stiffeners With Torque Specifications (Passenger Side)

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the harness clip (A).
6. Pull down the lever (B) of the EPS motor 3P connector (C), then confirm the connector is fully seated.
7. Connect the Connectors (D).

Fig. 233: Pulling Lever Of EPS Motor 3P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Propeller Shaft Assembly (AWD/4WD)
    1. Install the propeller shaft assembly (A), then Install new center support bearing mounting bolts (B).

Fig. 234: Identifying Propeller Shaft Assembly

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Propeller Shaft Differential Side - Reconnection (AWD/4WD)
    1. Set the No. 2 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference mark (C) you made during the removal procedure.
    2. Install new No. 2 propeller shaft flange bolts (D) to the specified torque.

Fig. 235: Identifying Rear Differential Companion Flange, Propeller Shaft And Flange Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Propeller Shaft Transmission Side - Reconnection (AWD/4WD)
    1. Set the No. 1 propeller shaft (A) to the transfer companion flange (B) by aligning the reference mark (C) you made during the removal procedure.
    2. Install new No. 1 propeller shaft flange bolts (D) to the specified torque.

GETtheMANUALS.org

Fig. 236: Identifying Transfer Companion Flange, Propeller Shaft And Flange Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Propeller Shaft Protector No. 2 (AWD/4WD)
    1. Install the No. 2 propeller shaft protector (A).

Fig. 237: Identifying Propeller Shaft Protector (No. 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Propeller Shaft Protector No. 1 (AWD/4WD)
    1. Install the No. 1 propeller shaft protector (A).

GETtheMANUALS.org

Fig. 238: Identifying Propeller Shaft Protector (No. 1)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Left Middle Floor Undercover (AWD/4WD)
    1. Install the left middle floor undercover (A), then install the bolts (B) and the clips (C, D). The clips snap into place securely.

GETtheMANUALS.org

Fig. 239: Identifying Left Middle Floor Undercover, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Under Floor TWC Assembly
    1. Install the under-floor TWC.

Fig. 240: Identifying Under-Floor TWC With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Front Floor Undercover
    1. Install the front floor undercover (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

GETtheMANUALS.org

Fig. 241: Identifying Front Floor Undercover, Bolts And Clips With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

GETtheMANUALS.org

Fig. 242: Identifying Front Splash Shield, Bolts And Clips With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Front Stabilizer Link Stabilizer Bar Side - Reconnection, Both Side
    1. Connect both sides of the stabilizer link (A) to the front stabilizer bar (B).
    2. Install the flange nuts (C), and tighten them to the specified torque while holding the respective joint pin (D) with a hex wrench (E).

GETtheMANUALS.org

Fig. 243: Installing Front Stabilizer Link Stabilizer Bar Side
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Tie-Rod End Ball Joint - Connection, Both Side
    1. Wipe off any grease contamination from the ball joint tapered section and threads.
    2. Connect the tie-rod ball joint (A) to the knuckle.
    3. Install the nut (B) and tighten to the specified torque.
    4. Install a new cotter pin (C).

NOTE: **Bend the cotter pin as shown.**

GETtheMANUALS.org

Fig. 244: Identifying Tie-Rod Ball Joint, Cotter Pin And Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Steering Column Lower Slide Shaft - Release
    1. Cut the wire (A).

Fig. 245: Identifying Steering Column Lower Slide Shaft And Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Steering Wheel Release
    1. Remove the steering wheel holder tool (A).

GETtheMANUALS.org

Fig. 246: Identifying Steering Wheel Holder Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Steering Joint - Reconnection
    1. Place the rack in the straight ahead driving position.
    2. Slip the lower end of the steering joint (A) onto the pinion shaft (B).

NOTE: Position the steering column by aligning the gap (C) within the angle.

Fig. 247: Installing Lower End Of Steering Joint Onto Pinion Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Align the bolt hole (A) on the steering joint with the groove (B) around the pinion shaft.
    4. Loosely install the steering joint bolt (C).
    5. Be sure that the joint bolt is securely in the groove in the pinion shaft.
    6. Pull on the steering joint to make sure that the steering joint is fully seated.

GETtheMANUALS.org

7. Tighten the steering joint bolt to the specified torque.

Fig. 248: Identifying Pinion Shaft Groove, Steering Joint Bolt And Bolt Hole With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Steering Joint Cover
    1. Install the steering joint cover (A).

Fig. 249: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Front Wheel - Both Side
    1. Install both front wheels.

GETtheMANUALS.org

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 250: Identifying Front Wheels With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Battery Terminal (SRS) - Reconnection

NOTE: **If the battery performance is abnormal, test the battery.**

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: **Always connect the positive side first.**

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

GETtheMANUALS.org

Fig. 251: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Steering Gearbox - After Install Symptom Check
    1. With the tires raised off the ground, check for the following symptoms by turning the steering wheel fully to the right and left several times.

Symptom	Probable cause
Rubbing sound coming from the lower steering column area.	Steering column joint is contacting the cover.
Grating sound from the lower steering column area, or a rough feeling during steering.	Poor engagement of the pinion shaft serrations.
Noise from around the steering wheel during steering.	Poor engagement of the SRS cable reel with the steering wheel, or a damaged cable reel.

27. Steering After Install - Check
    1. After installation, check these items:
        - Start the engine, allow it to idle, and turn the steering wheel from lock to lock several times.
        - Check that the EPS indicator does not come on.
        - Check the steering wheel spoke angle. If steering spoke angles to the right and left are not equal (steering wheel and rack are not centered), correct the engagement of the joint/pinion shaft splines.
28. Pre-Alignment Checks

    For proper inspection and adjustment of the wheel alignment, do these checks:

    1. Release the parking brake to avoid an incorrect measurement.
    2. Make sure the suspension is not modified.

GETtheMANUALS.org

3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
4. Check the tire size and tire pressure according to tire information.
5. Set the steering column to the middle tilt position and telescopic position.

29. Caster - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Check the caster angle.

   Caster angle:

   2WD:

   With 16 inch wheel: 2 ° 44 '±30 '

   Without 16 inch wheel: 2 ° 50 '±30 '

   AWD/4WD:

   With 16 inch wheel: 2 ° 38 '±30 '

   Without 16 inch wheel: 2 ° 44 '±30 '

   - If the measurement is within specifications, measure the front camber angle.
   - If the measurement is not within specifications, check for bent or damaged suspension components.

30. Camber - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Check the camber angle.

   Camber angle:

   2WD:

   Front:

   With 16 inch wheel: -0 ° 01 '±1 ° 00 '

   Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

   (Maximum difference between the front right and left side: 1 °00 ')

GETtheMANUALS.org

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

31. Front Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Set the steering column to the middle tilt position and telescopic positions.
2. Center the steering wheel spokes, and install a steering wheel holder tool.
3. Check the toe with the wheels pointed straight ahead.

Front toe-in: 0±2 mm (0±0.08 in)

- If adjustment is required, go to the front toe adjustment.
- If no adjustment is required, remove the alignment equipment.

32. Turning Angle - Inspection

GETtheMANUALS.org

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Turn the wheel right and left while applying the brake, and measure the turning angle of both wheels.

   Turning angle:

   2WD:

   Inward:

   With 16 inch wheel: 36 ° 29 '±2 °

   Without 16 inch wheel: 36 ° 13 '±2 °

   Outward (reference):

   With 16 inch wheel: 31 ° 13 '

   Without 16 inch wheel: 31 ° 02 '

   AWD/4WD:

   Inward:

   With 16 inch wheel: 36 ° 48 '±2 °

   Without 16 inch wheel: 36 ° 30 '±2 °

   Outward (reference):

   With 16 inch wheel: 31 ° 18 '

   Without 16 inch wheel: 31 ° 12 '

2. If the measurement is not within the specifications, even up both sides of the tie-rod threaded section length while adjusting the front toe.
3. If it is correct, but the turning angle is not within the specifications, check for bent or damaged suspension components.

GETtheMANUALS.org

Fig. 252: Measuring Turning Angle Of Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

33. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 253: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

GETtheMANUALS.org

NOTE: **See the HDS Help menu for specific instructions.**

35. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

NOTE: **See the HDS Help menu for specific instructions.**

STEERING LINKAGE AND GEARBOX INSPECTION

INSPECTION

1. Steering Linkage and Gearbox Inspection

Fig. 254: Steering Linkage And Gearbox Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

STEERING LOCK REMOVAL AND INSTALLATION

GETtheMANUALS.org

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** , and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 255: Identifying Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Airbag
    1. Remove the access panel (A).
    2. Disconnect the driver's airbag inflator connector (B) on the cable reel harness.
    3. Disconnect the horn switch connector (C).

GETtheMANUALS.org

Fig. 256: Identifying Access Panel, Driver's Airbag Inflator Connector And Horn Switch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the TORX bolts using a TORX T30 bit.
5. Remove the driver's airbag (A).

Fig. 257: Identifying Driver's Airbag And Torx Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Steering Wheel Assembly
    1. Set the front wheels in the straight ahead position.
    2. Disconnect the connector (A).

GETtheMANUALS.org

3. Loosen the steering wheel bolt (B) three turns.

Fig. 258: Identifying Steering Wheel Connector And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install a commercially available steering wheel puller (A) on the steering wheel (B).
5. Free the steering wheel from the steering column shaft by turning the pressure bolt (C) of the puller.

   Note these items when removing the steering wheel:

   - Do not tap on the steering wheel or the steering column shaft when removing the steering wheel.
   - If you thread the puller bolts (D) into the wheel hub more than five threads, the bolts will hit the cable reel and damage it. To prevent this, install a pair of jam nuts five threads up on each puller bolt.

GETtheMANUALS.org

Fig. 259: Turning Steering Wheel Pressure Bolt Using Puller
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the steering wheel puller.
7. Remove the steering wheel (A) from the steering column.

Fig. 260: Identifying Steering Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Upper Column Cover
    1. Carefully pry out the dashboard meter visor blind cover (A) with the appropriate trim tool to detach the clips (B) and the hook (C), then tuck up the dashboard meter visor blind cover.

GETtheMANUALS.org

Fig. 261: Identifying Dashboard Meter Visor Blind Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the upper column cover (A).

Fig. 262: Identifying Upper Column Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Lower Column Cover
    1. Remove the screws (A) securing the lower column cover (B) from the front side.

GETtheMANUALS.org

Fig. 263: Identifying Lower Column Cover And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the screw (A), then remove the lower column cover (B).

Fig. 264: Identifying Lower Column Cover And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

6. Combination Switch Body Assembly
    1. Disconnect the connectors (A).
    2. Remove the clip (B).

Fig. 265: Identifying Combination Switch Connector And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connectors (A).

Fig. 266: Identifying Combination Switch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the combination switch body assembly (A) from the steering column shaft.

GETtheMANUALS.org

Fig. 267: Identifying Combination Switch Body Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Immobilizer-Keyless Control Unit
    1. Disconnect the connector.
    2. Remove the immobilizer-keyless control unit (A).

Fig. 268: Identifying Immobilizer-Keyless Control Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Steering Joint Cover
    1. Remove the steering joint cover (A).

GETtheMANUALS.org

Fig. 269: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Steering Column Lower Slide Shaft - Hold
    1. Set the steering column to the center tilt position, and to the center telescopic position.
    2. Hold the lower slide shaft (A) on the column with a piece of wire (B) between the joint yoke (C) of the lower slide shaft and the joint yoke (D) of the upper shaft to prevent the lower slider shaft from pulling out.

Fig. 270: Holding Lower Slide Shaft On Column Using Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Steering Joint - Disconnection
    1. Remove the steering joint bolt (A).
    2. Disconnect the steering joint (B) from the pinion shaft.

NOTE:

- **If the center guide (C) is in place and has not moved, leave it in place.**
- **If the center guide has come off, discard it.**

GETtheMANUALS.org

Fig. 271: Identifying Steering Joint, Center Guide And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Steering Column
    1. Disconnect the connectors (A) from the ignition switch (B).

Fig. 272: Identifying Steering Column, Connectors, Ignition Switch And Wire Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. Detach the wire harness clips (C) from the steering column.
3. Remove the steering column (D).

NOTE: **Do not release the lock lever until the steering column is installed. If the lock lever is released before installation, adjust the steering column after installation.**

12. Steering Lock Assembly
    1. Center-punch both of the two shear bolts (A).
    2. Drill their heads off with a 5 mm (0.20 in) drill bit. Be careful not to damage the steering lock when removing the shear bolts.
    3. Remove the steering lock (B).

Fig. 273: Removing Steering Lock Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** , and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Steering Lock Assembly
    1. Install the steering lock (A) without the key inserted.
    2. Loosely tighten the new shear bolts (B).
    3. Insert the ignition key, and check for proper operation of the steering wheel lock and that the ignition key turns freely.

GETtheMANUALS.org

Fig. 274: Identifying Steering Lock And Shear Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the shear bolts (A) until the hex heads (B) twist off.

Fig. 275: Identifying Shear Bolt With Hex Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Steering Column
    1. Install the steering column (A).

NOTE: **Do not release the lock lever until the steering column is installed. If the lock lever is released before installation, adjust the steering column after installation.**

GETtheMANUALS.org

Fig. 276: Identifying Steering Column And Related Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Loosely tighten the attaching nuts and bolts.
3. Tighten the attaching nuts and bolts to the specified torque in the sequence shown.
4. Install the wire harness clips (B) to the steering column.
5. Connect the connectors (C) to the ignition switch (D).

3. Steering Column Lower Slide Shaft - Release
   1. Cut the wire (A).

Fig. 277: Identifying Steering Column Lower Slide Shaft And Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

4. Steering Joint - Reconnection
    1. Place the rack in the straight ahead driving position.
    2. Slip the lower end of the steering joint (A) onto the pinion shaft (B).

NOTE:

- **Pinion shaft with center guide: Install the steering joint by aligning the center guide (C).**
- **Pinion shaft without center guide: Position the steering column by aligning the gap (D) within the angle.**

Fig. 278: Identifying Steering Joint, Pinion Shaft And Center Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Align the bolt hole (A) on the steering joint with the groove (B) around the pinion shaft.
4. Loosely install the steering joint bolt (C).
5. Be sure that the joint bolt is securely in the groove in the pinion shaft.
6. Pull on the steering joint to make sure that the steering joint is fully seated.
7. Tighten the steering joint bolt to the specified torque.

GETtheMANUALS.org

Fig. 279: Identifying Pinion Shaft Groove, Steering Joint Bolt And Bolt Hole With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Steering Joint Cover
    1. Install the steering joint cover (A).

Fig. 280: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Immobilizer-Keyless Control Unit
    1. Install the immobilizer-keyless control unit (A).
    2. Connect the connector.

GETtheMANUALS.org

Fig. 281: Identifying Immobilizer-Keyless Control Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Combination Switch Body Assembly
    1. Install the combination switch body assembly (A).
    2. Tighten three screws (B) in the sequence shown.

Fig. 282: Identifying Combination Switch Body Assembly Mounting Screws Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Connect the connectors (A).

GETtheMANUALS.org

Fig. 283: Identifying Combination Switch Body Assembly Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Connect the connectors (A).
5. Install the clip (B).

Fig. 284: Identifying Combination Switch Body Assembly Connectors And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Lower Column Cover
    1. Push in on the lower column cover just above ignition switch opening (A) to engage the column cover with the locking tab (B).

GETtheMANUALS.org

Fig. 285: Engaging Column Cover With Lock Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the lower column cover (A), then install the screw (B).

Fig. 286: Identifying Lower Column Cover And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screws (A) securing the lower column cover (B) from the front side.

GETtheMANUALS.org

Fig. 287: Identifying Lower Column Cover And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Upper Column Cover
    1. Install the upper column cover (A).

Fig. 288: Identifying Upper Column Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the dashboard meter visor blind cover (A). Make sure the clips (B) and the hook (C) snap into place securely.

GETtheMANUALS.org

Fig. 289: Identifying Dashboard Meter Visor Blind Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Steering Wheel Assembly
    1. Make sure the front wheels are pointing straight ahead.
    2. Center the cable reel (A). Do this by first rotating the cable reel clockwise until it stops.
    3. Rotate the cable reel counterclockwise about three full turns. The arrow mark (B) on the cable reel label should point straight up.

Fig. 290: Identifying Cable Reel With Arrow Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    4. Position the steering wheel hub (A) so that it engages the pin (B) of the cable reel.

GETtheMANUALS.org

5. Install the steering wheel (C) on to the steering column shaft.

NOTE: **Do not tap on the steering wheel or the steering column shaft when installing the steering wheel.**

Fig. 291: Identifying Steering Wheel, Hub And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the steering wheel bolt (A), and tighten it to the specified torque.
7. Connect the connector (B).
8. Make sure the wire harness is routed and fastened properly.

Fig. 292: Identifying Steering Wheel Bolt And Connector With Torque Specifications

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Driver's Airbag

NOTE: **If you are replacing a deployed driver's airbag, inspect the cable reel for heat damage. If there is any damage, replace the cable reel.**

1. Place the driver's airbag (A) in the steering wheel.
2. Tighten the new TORX bolts using a TORX T30 bit.

NOTE: **Make sure the clearance (B) between the steering wheel and the horn pad is the specified value.**

Fig. 293: Identifying Driver Airbag With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Fig. 294: Identifying Clearance Between Steering Wheel And Horn Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the driver's airbag inflator connector (A) on the cable reel harness.
4. Connect the horn switch connector (B).

NOTE: **After reconnecting the negative cable to the battery, make sure the horn works properly.**

5. Install the access panel (C).

Fig. 295: Identifying Driver Airbag Inflator Connector, Horn Switch Connector And Access Panel

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 296: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Steering After Install - Check
    1. After installation, check these items:
        - Start the engine, allow it to idle, and turn the steering wheel from lock to lock several times.
        - Check that the EPS indicator does not come on.
        - Check the steering wheel spoke angle. If steering spoke angles to the right and left are not equal (steering wheel and rack are not centered), correct the engagement of the joint/pinion shaft splines.
14. Pre-Alignment Checks

For proper inspection and adjustment of the wheel alignment, do these checks:

GETtheMANUALS.org

1. Release the parking brake to avoid an incorrect measurement.
2. Make sure the suspension is not modified.
3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
4. Check the tire size and tire pressure according to tire information.
5. Set the steering column to the middle tilt position and telescopic position.

15. Front Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Set the steering column to the middle tilt position and telescopic positions.
2. Center the steering wheel spokes, and install a steering wheel holder tool.
3. Check the toe with the wheels pointed straight ahead.

Front toe-in: 0±2 mm (0±0.08 in)

- If adjustment is required, go to the front toe adjustment.
- If no adjustment is required, remove the alignment equipment.

16. HDS DLC - Connection

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 297: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

17. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

18. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

19. Immobilizer Key - Registration

    NOTE:
    - **The HDS is required for registration of the immobilizer keys.**
    - **Programming the immobilizer also programs the keyless transmitter.**
    - **Check for aftermarket electrical equipment that can cause problems with transponder operation.**
    - **The immobilizer-keyless control unit can store up to six immobilizer keys.**

    1. Prepare all new keys and have the immobilizer PCM code.
    2. Select IMMOBI from the SYSTEM SELECTION MENU, then select IMMOBILIZER SETUP.
    3. Select ADD AND DELETE KEYS, then ALL KEYS LOST.
    4. Do the registration according to the instructions on the HDS screen.
    5. Check that the engine can be started with the newly registered keys.
    6. When prompted by the HDS, do the keyless transmitter programming.
    7. Make sure the keyless transmitter works properly.

STEERING RACK END REMOVAL AND INSTALLATION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number

GETtheMANUALS.org

	Ball Joint Remover, 28 mm 07MAC-SL00202
	Ball Joint Thread Protector, 12 mm 07AAF-SDAA100
	Subframe Adapter VSB02C000016(1)

GETtheMANUALS.org

	
	Subframe Alignment Pin 070AG-SJAA10S
(1) Available through the Honda Tool and Equipment Program 888-424-6857	

REMOVAL

NOTE: Do not allow dust, dirt, or other foreign materials to enter the steering gearbox.

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

GETtheMANUALS.org

Fig. 298: Identifying Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
3. Front Wheel - Both Side
    1. Remove both front wheels.

Fig. 299: Identifying Front Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Steering Joint Cover
    1. Remove the steering joint cover (A).

GETtheMANUALS.org

Fig. 300: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Steering Column Lower Slide Shaft - Hold
    1. Set the steering column to the center tilt position, and to the center telescopic position.
    2. Hold the lower slide shaft (A) on the column with a piece of wire (B) between the joint yoke (C) of the lower slide shaft and the joint yoke (D) of the upper shaft to prevent the lower slider shaft from pulling out.

Fig. 301: Holding Lower Slide Shaft On Column Using Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Steering Wheel Hold
    1. Center the steering wheel spoke angle.
    2. Install a commercially available steering wheel holder tool (A).

GETtheMANUALS.org

Fig. 302: Identifying Lower Slide Shaft, Wire And Yoke Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Steering Joint - Disconnection
    1. Remove the steering joint bolt (A).
    2. Disconnect the steering joint (B) from the pinion shaft.
    3. Remove the center guide (C) (if equipped), and discard it.

Fig. 303: Identifying Steering Joint, Center Guide And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Ball Joint - Removal

NOTE: **Always use a ball joint remover to disconnect a ball joint. Do not strike the housing or any other part of the ball joint connection to disconnect it.**

1. Install a hex nut (A) or the ball joint thread protector.

GETtheMANUALS.org

NOTE: **When using a hex nut, make sure the nut is flush with the ball joint pin end to prevent damage to the threaded end of the ball joint pin.**

Fig. 304: Identifying Hex Nut Or Ball Joint Thread Protector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply grease to the ball joint remover on the areas shown (A).

Fig. 305: Identifying Grease Applying Areas On Ball Joint Remover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the ball joint remover as shown.

NOTE:

- **Fasten the safety tie (A) securely to a suspension arm or the subframe (B).**
- **Making sure not to damage the ball joint boot.**

GETtheMANUALS.org

4. Tighten the pressure bolt until the ball joint pin pops loose from the ball joint connecting hole.

NOTE: Do not use pneumatic or electric tools on the pressure bolt.

5. Remove the ball joint remover.
6. Remove the hex nut or the ball joint thread protector.
7. Pull the ball joint out of the ball joint connecting hole.

Fig. 306: Fastening Safety Tie On Suspension Arm Or Subframe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Tie-Rod End Ball Joint - Disconnection, Both Side
   1. Remove the cotter pin (A) from the tie-rod end ball joint.
   2. Remove the nut (B).
   3. Disconnect the tie-rod end ball joint.

NOTE: Be careful not to damage the ball joint boot when installing the remover.

GETtheMANUALS.org

Fig. 307: Identifying Tie-Rod End Ball Joint Cotter Pin And Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Front Stabilizer Link Stabilizer Bar Side - Disconnection, Both Side
    1. Remove the flange nuts (A) while holding the respective joint pin (B) with a hex wrench (C).
    2. Disconnect both sides of the stabilizer link (D) from the front stabilizer bar (E).

Fig. 308: Removing Flange Nuts Using Hex Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Front Splash Shield

GETtheMANUALS.org

1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
2. From under the front bumper (D), remove the clips (E).
3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 309: Identifying Front Bumper, Front Splash Shield, Bolt And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Front Floor Undercover
    1. Remove the bolts (A) and the clips (B, C) securing the front floor undercover (D), then remove the front floor undercover.

GETtheMANUALS.org

Fig. 310: Identifying Front Floor Undercover, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Under-Floor TWC Assembly
    1. Remove the under-floor TWC.

Fig. 311: Identifying Under-Floor TWC
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

14. Left Middle Floor Undercover (AWD/4WD)
    1. Remove the bolts (A) and clips (B, C), then remove the left middle floor undercover (D).

Fig. 312: Identifying Left Middle Floor Undercover, Clips And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Propeller Shaft Protector No. 1 (AWD/4WD)
    1. Remove the No. 1 propeller shaft protector (A).

GETtheMANUALS.org

Fig. 313: Identifying Propeller Shaft Protector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Propeller Shaft Protector No. 2 (AWD/4WD)
    1. Remove the No. 2 propeller shaft protector (A).

Fig. 314: Identifying Propeller Shaft Protector (No. 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Propeller Shaft Transmission Side - Disconnection (AWD/4WD)
    1. Make reference mark (A) across the No. 1 propeller shaft (B) and the transfer companion flange (C).
    2. Remove the No. 1 propeller shaft flange bolts (D).

GETtheMANUALS.org

Fig. 315: Identifying Transfer Companion Flange, Propeller Shaft And Flange Bolt With Reference Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Propeller Shaft Differential Side - Disconnection (AWD/4WD)
    1. Make reference mark (A) across the No. 2 propeller shaft (B) and the rear differential companion flange (C).
    2. Remove the No. 2 propeller shaft flange bolts (D).

Fig. 316: Identifying Rear Differential Flange, Propeller Shaft And Flange Bolt With Reference Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Propeller Shaft Assembly (AWD/4WD)
    1. Remove the center support bearing mounting bolts (A), then remove the propeller shaft assembly (B).

GETtheMANUALS.org

Fig. 317: Identifying Propeller Shaft Assembly And Center Support Bearing Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Power Steering Gearbox Items

NOTE: Wrap the connectors with vinyl tape to avoid contamination from grease or water.

1. Disconnect the EPS motor 3P connector (A) by pushing the lock (B) and pulling up the lever (C).
2. Disconnect the connectors (D).
3. Remove the harness clip (E).

Fig. 318: Disconnecting EPS Motor 3P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

4. Remove the steering gearbox mounting bolts (A).
5. Remove the stiffener mounting bolts (B).
6. Remove the steering gearbox stiffeners (C).

Driver's side

Fig. 319: Identifying Steering Gearbox Stiffeners And Mounting Bolts (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's side

GETtheMANUALS.org

Fig. 320: Identifying Steering Gearbox Stiffeners And Mounting Bolts (Passenger Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Subframe Support
    1. Attach the subframe adapter (A) to the front subframe by looping the belt (B) over the front of the front subframe (C), then secure the belt with its stop (D).
    2. Raise the jack and line up the slots in the subframe adapter arms with the bolt holes on the jack base, then securely attach them with four bolts.

Fig. 321: Attaching Subframe Adapter To Front Subframe By Looping Belt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Lower Torque Rod - Disconnection
    1. Remove the lower torque rod mount mounting bolts (A).

GETtheMANUALS.org

Fig. 322: Identifying Lower Torque Rod Mount Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Front Subframe - Move
    1. Remove the mid mounting bolts (A) on both sides.

Fig. 323: Identifying Mid Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Loosen the front subframe mounting bolts (A) so they are about 30 mm (1.18 in) from the mounting surface on both sides.

NOTE: **Do not loosen the front subframe mounting bolts more than necessary.**

GETtheMANUALS.org

Fig. 324: Identifying Front Subframe Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the front subframe mounting bolts (A) on both side.
4. Lower the jack slowly until the front subframe has dropped about 130 mm (5.12 in).

Fig. 325: Identifying Front Subframe Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Pinion Shaft Grommet
    1. Remove the pinion shaft grommet (A).
    2. Wrap vinyl tape over the splines on the pinion shaft (B).

GETtheMANUALS.org

Fig. 326: Identifying Pinion Shaft And Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Power Steering Gearbox Assembly
    1. Move the steering gearbox to the driver's side, and rotate it so the pinion shaft (A) points toward the rear of the vehicle.
    2. Carefully move the steering gearbox (B) as an assembly toward the driver's side of the vehicle until the pinion shaft clears the wheelwell opening.
    3. Remove the steering gearbox through the wheelwell opening on the driver's side.

Fig. 327: Removing Steering Gearbox
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Tie-Rod End
    1. Loosen the locknut (A).

GETtheMANUALS.org

2. Remove the tie-rod end (B), then remove the locknut.

Fig. 328: Identifying Tie-Rod End And Lock Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Rack End Boot
    1. Remove the boot band (A).
    2. Remove the tie-rod clip (B).
    3. Pull the boot (C) away from the ends of the steering gearbox.

Fig. 329: Identifying Boot Band, Tie-Rod Clip And Boot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Rack End
    1. Hold the gearbox housing using a C-clamp (A) to a workbench as shown.

GETtheMANUALS.org

NOTE: **Do not clamp the cylinder part of the gearbox housing in a vise.**

Fig. 330: Holding Gearbox Housing Using C-Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Unbend the lock washer (A).

Fig. 331: Removing Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Unscrew the rack end (A) with a wrench.

NOTE: **Be careful not to damage the rack surface with the wrench.**

4. Remove the lock washer (B).
5. Remove the spacer (C).
6. Remove the damper (D).

GETtheMANUALS.org

Fig. 332: Removing Rack End Using Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

NOTE: Do not allow dust, dirt, or other foreign materials to enter the steering gearbox.

1. Rack End
    1. Hold the gearbox housing using a C-clamp (A) to a workbench as shown.

NOTE: Do not clamp the cylinder part of the gearbox housing in a vise.

GETtheMANUALS.org

Fig. 333: Holding Gearbox Housing Using C-Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the damper (A).

NOTE: **Make sure that the tapered side (B) of the damper is facing toward the gearbox.**

3. Install a new spacer (C).
4. Install a new lock washer (D).
5. Align the lock washer tabs (E) with the flat spots (F) on the rack end ball joint housing.
6. Install the rack end (G) while holding the lock washer in place.

Fig. 334: Identifying Damper, Spacer, Lock Washer, Tabs And Rack End
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

7. Bend the lock washer tabs (A) back against the flat spots on the rack end joint housing.

Fig. 335: Twisting Lock Washer Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Stake the lock washer at the stake point (A) on the rack.

Fig. 336: Locating Stake Point On Lock Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Apply multipurpose grease to the circumference of the rack end joint housing (A) and boot grooves (B) on the rack end.

Fig. 337: Identifying Rack End Joint Housing And Boot Grooves Grease Applying Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. Rack End Boot
    1. Apply a light coat of multipurpose grease to the boot installation groove (A) around the gearbox housing.
    2. Install the boots (B) on the rack ends with the tie-rod clips (C).
    3. Fit the boot end in the installation grooves in the housing properly.
    4. After installing the boots, wipe the grease off the threaded section (D) of the rack end.

Fig. 338: Identifying Tie Rod Clip, Boots, Groove And Threaded Section On Rack End
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the new boot bands (A) by aligning the tabs (B) with the holes (C) on the band.

Fig. 339: Identifying Boot Band, Tabs And Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Close the ear portion (A) of the boot band (B) with pincers Oetiker 1098, commercially available or

GETtheMANUALS.org

equivalent (C).

Fig. 340: Closing Ear Portion Of Boot Band Using Pincers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tie-Rod End
    1. Install the locknut (A).
    2. Install the tie-rod end (B), then tighten the locknut.

Fig. 341: Identifying Tie-Rod End And Lock Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Power Steering Gearbox Assembly
    1. Apply vinyl tape to the splines on the pinion shaft (A).
    2. Slide the steering gearbox (B) between the front subframe and body from the driver's side.

GETtheMANUALS.org

3. Carefully move the steering gearbox toward the passenger's side until the pinion shaft clears the wheelwell opening on the body.
4. Rotate the steering gearbox so the pinion shaft points upward.
5. Continue moving the steering gearbox toward the passenger's side until the steering gearbox is in position.

Fig. 342: Rotating Steering Gearbox
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Pinion Shaft Grommet
    1. Remove the vinyl tape (A) from pinion shaft.
    2. Install the pinion shaft grommet (B).
    3. Align the lug portion (C) in the pinion shaft grommet with the cutout portion (D) on the steering gearbox.

GETtheMANUALS.org

Fig. 343: Identifying Pinion Shaft Grommet, Lug Portion, Cutout Portion And Vinyl Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Subframe - Move
    1. Turn the lip (A) of the pinion shaft grommet.
    2. Lift the front subframe (B) up to the body, then restore the pinion shaft grommet back to proper position.

NOTE: **Be sure that the pinion shaft grommet is securely in place. Make sure the lip of the pinion shaft grommet is not turned up. Incorrect installation can cause leakage of water and mud, or noise.**

Fig. 344: Lifting Front Subframe Up To Body

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Loosely install the new front subframe mounting bolts (A).

Fig. 345: Identifying Front Subframe Mounting Bolts With Torque Specifications (1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 346: Identifying Front Subframe Mounting Bolts With Torque Specifications (2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Loosely install the mid mounting bolts (A).

GETtheMANUALS.org

Fig. 347: Identifying Mid Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Subframe - Alignment

NOTE:

- **Align the front subframe in the following sequence.**
- **When Installing, align both installation reference holes in the subframe with both reference holes in the body using the subframe alignment pin.**

1. Insert the subframe alignment pin (A) through the positioning hole (B) on the right rear subframe, and into the positioning hole (C) on the body, then loosely tighten the subframe right rear mounting bolts.

GETtheMANUALS.org

Fig. 348: Inserting Subframe Alignment Pin Into Right Rear Subframe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the subframe alignment pin through the positioning hole on the left rear subframe, and into the positioning hole on the body, then loosely tighten the subframe left rear mounting bolts.
3. Tighten the subframe mounting bolts to the specified torque values starting with the right rear subframe mounting bolt. Use the subframe alignment pin when tightening the rear side subframe mounting bolts.
4. Check all of the subframe mounting bolts, and retighten if necessary.

NOTE: Tighten the bolts in the sequence shown.

5. Tighten the mid mounting bolts to the specified torque.
6. Lower the transmission jack supporting the subframe.

8. Lower Torque Rod - Reconnection
   1. Loosely install the new lower torque rod mounting bolts (A).

GETtheMANUALS.org

Fig. 349: Identifying Lower Torque Rod Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Lower Torque Rod Mounting Bolt - Tighten
    1. Loosen the lower torque mount mounting bolt.
    2. Tighten the lower torque rod mount mounting bolts in the numbered sequence shown.

Fig. 350: Identifying Lower Torque Rod Mount Mounting Bolts Tightening Sequence With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Power Steering Gearbox Items
    1. Install the steering gearbox stiffeners (A).
    2. Loosely tighten the steering gearbox mounting bolts (B).
    3. Loosely tighten the stiffener mounting bolts (C).
    4. Tighten the steering gearbox mounting bolts and the stiffener mounting bolts to the specified torque

GETtheMANUALS.org

in the sequence shown.

Driver's side

Fig. 351: Identifying Steering Gearbox Stiffeners With Torque Specifications (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's side

Fig. 352: Identifying Steering Gearbox Stiffeners With Torque Specifications (Passenger Side)

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the harness clip (A).
6. Pull down the lever (B) of the EPS motor 3P connector (C), then confirm the connector is fully seated.
7. Connect the Connectors (D).

Fig. 353: Pulling Lever Of EPS Motor 3P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Propeller Shaft Assembly (AWD/4WD)
    1. Install the propeller shaft assembly (A), then Install new center support bearing mounting bolts (B).

Fig. 354: Identifying Propeller Shaft Assembly And Center Support Bearing Mounting Bolts

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Propeller Shaft Differential Side - Reconnection (AWD/4WD)
    1. Set the No. 2 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference mark (C) you made during the removal procedure.
    2. Install new No. 2 propeller shaft flange bolts (D) to the specified torque.

Fig. 355: Identifying Rear Differential Companion Flange, Propeller Shaft And Flange Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Propeller Shaft Transmission Side - Reconnection (AWD/4WD)
    1. Set the No. 1 propeller shaft (A) to the transfer companion flange (B) by aligning the reference mark (C) you made during the removal procedure.
    2. Install new No. 1 propeller shaft flange bolts (D) to the specified torque.

GETtheMANUALS.org

Fig. 356: Identifying Transfer Companion Flange, Propeller Shaft And Flange Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Propeller Shaft Protector No. 2 (AWD/4WD)
    1. Install the No. 2 propeller shaft protector (A).

Fig. 357: Identifying Propeller Shaft Protector (No. 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Propeller Shaft Protector No. 1 (AWD/4WD)
    1. Install the No. 1 propeller shaft protector (A).

GETtheMANUALS.org

Fig. 358: Identifying Propeller Shaft Protector (No. 1)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Left Middle Floor Undercover (AWD/4WD)
    1. Install the left middle floor undercover (A), then install the bolts (B) and the clips (C, D). The clips snap into place securely.

GETtheMANUALS.org

Fig. 359: Identifying Left Middle Floor Undercover, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Under Floor TWC Assembly
    1. Install the under-floor TWC.

Fig. 360: Identifying Under-Floor TWC With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Front Floor Undercover
    1. Install the front floor undercover (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

GETtheMANUALS.org

Fig. 361: Identifying Front Floor Undercover, Bolts And Clips With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

GETtheMANUALS.org

Fig. 362: Identifying Front Splash Shield, Bolts And Clips With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Front Stabilizer Link Stabilizer Bar Side - Reconnection, Both Side
    1. Connect both sides of the stabilizer link (A) to the front stabilizer bar (B).
    2. Install the flange nuts (C), and tighten them to the specified torque while holding the respective joint pin (D) with a hex wrench (E).

GETtheMANUALS.org

Fig. 363: Installing Front Stabilizer Link Stabilizer Bar Side
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Tie-Rod End Ball Joint - Connection, Both Side
    1. Wipe off any grease contamination from the ball joint tapered section and threads.
    2. Connect the tie-rod ball joint (A) to the knuckle.
    3. Install the nut (B) and tighten to the specified torque.
    4. Install a new cotter pin (C).

NOTE: **Bend the cotter pin as shown.**

GETtheMANUALS.org

Fig. 364: Identifying Tie-Rod Ball Joint, Cotter Pin And Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Steering Column Lower Slide Shaft - Release
    1. Cut the wire (A).

Fig. 365: Identifying Steering Column Lower Slide Shaft And Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Steering Wheel Release
    1. Remove the steering wheel holder tool (A).

GETtheMANUALS.org

Fig. 366: Identifying Steering Wheel Holder Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Steering Joint - Reconnection
    1. Place the rack in the straight ahead driving position.
    2. Slip the lower end of the steering joint (A) onto the pinion shaft (B).

NOTE: Position the steering column by aligning the gap (C) within the angle.

Fig. 367: Installing Lower End Of Steering Joint Onto Pinion Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Align the bolt hole (A) on the steering joint with the groove (B) around the pinion shaft.
    4. Loosely install the steering joint bolt (C).
    5. Be sure that the joint bolt is securely in the groove in the pinion shaft.
    6. Pull on the steering joint to make sure that the steering joint is fully seated.

GETtheMANUALS.org

7. Tighten the steering joint bolt to the specified torque.

Fig. 368: Identifying Pinion Shaft Groove, Steering Joint Bolt And Bolt Hole With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Steering Joint Cover
    1. Install the steering joint cover (A).

Fig. 369: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Front Wheel - Both Side
    1. Install both front wheels.

GETtheMANUALS.org

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc and the inside of the wheel.**

Fig. 370: Identifying Front Wheel With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Battery Terminal (SRS) - Reconnection

NOTE: **If the battery performance is abnormal, test the battery.**

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: **Always connect the positive side first.**

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

GETtheMANUALS.org

Fig. 371: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Steering Gearbox - After Install Symptom Check
    1. With the tires raised off the ground, check for the following symptoms by turning the steering wheel fully to the right and left several times.

Symptom	Probable cause
Rubbing sound coming from the lower steering column area.	Steering column joint is contacting the cover.
Grating sound from the lower steering column area, or a rough feeling during steering.	Poor engagement of the pinion shaft serrations.
Noise from around the steering wheel during steering.	Poor engagement of the SRS cable reel with the steering wheel, or a damaged cable reel.

29. Steering After Install - Check
    1. After installation, check these items:
        - Start the engine, allow it to idle, and turn the steering wheel from lock to lock several times.
        - Check that the EPS indicator does not come on.
        - Check the steering wheel spoke angle. If steering spoke angles to the right and left are not equal (steering wheel and rack are not centered), correct the engagement of the joint/pinion shaft splines.
30. Pre-Alignment Checks

    For proper inspection and adjustment of the wheel alignment, do these checks:

    1. Release the parking brake to avoid an incorrect measurement.
    2. Make sure the suspension is not modified.

GETtheMANUALS.org

3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
4. Check the tire size and tire pressure according to tire information.
5. Set the steering column to the middle tilt position and telescopic position.

31. Caster - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Check the caster angle.

   Caster angle:

   2WD:

   With 16 inch wheel: 2 ° 44 '±30 '

   Without 16 inch wheel: 2 ° 50 '±30 '

   AWD/4WD:

   With 16 inch wheel: 2 ° 38 '±30 '

   Without 16 inch wheel: 2 ° 44 '±30 '

   - If the measurement is within specifications, measure the front camber angle.
   - If the measurement is not within specifications, check for bent or damaged suspension components.

32. Camber - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Check the camber angle.

   Camber angle:

   2WD:

   Front:

   With 16 inch wheel: -0 ° 01 '±1 ° 00 '

   Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

   (Maximum difference between the front right and left side: 1 °00 ')

GETtheMANUALS.org

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

33. Front Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Set the steering column to the middle tilt position and telescopic positions.
2. Center the steering wheel spokes, and install a steering wheel holder tool.
3. Check the toe with the wheels pointed straight ahead.

Front toe-in: 0±2 mm (0±0.08 in)

- If adjustment is required, go to the front toe adjustment.
- If no adjustment is required, remove the alignment equipment.

34. Turning Angle - Inspection

GETtheMANUALS.org

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Turn the wheel right and left while applying the brake, and measure the turning angle of both wheels.

   Turning angle:

   2WD:

   Inward:

   With 16 inch wheel: 36 ° 29 '±2 °

   Without 16 inch wheel: 36 ° 13 '±2 °

   Outward (reference):

   With 16 inch wheel: 31 ° 13 '

   Without 16 inch wheel: 31 ° 02 '

   AWD/4WD:

   Inward:

   With 16 inch wheel: 36 ° 48 '±2 °

   Without 16 inch wheel: 36 ° 30 '±2 °

   Outward (reference):

   With 16 inch wheel: 31 ° 18 '

   Without 16 inch wheel: 31 ° 12 '

2. If the measurement is not within the specifications, even up both sides of the tie-rod threaded section length while adjusting the front toe.
3. If it is correct, but the turning angle is not within the specifications, check for bent or damaged suspension components.

GETtheMANUALS.org

Fig. 372: Measuring Turning Angle Of Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 373: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

GETtheMANUALS.org

NOTE: **See the HDS Help menu for specific instructions.**

37. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

NOTE: **See the HDS Help menu for specific instructions.**

STEERING RACK GUIDE ADJUSTMENT

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Locknut Wrench, 40 mm 07AAA-TL2A100

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Floor Undercover
    1. Remove the bolts (A) and the clips (B, C) securing the front floor undercover (D), then remove the front floor undercover.

GETtheMANUALS.org

Fig. 374: Identifying Front Floor Undercover, Bolts And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ADJUSTMENT

1. Steering Rack Guide Adjustment
    1. Set the front wheels in the straight ahead position.
    2. Loosen the locknut (A) with the locknut wrench.
    3. Remove the rack guide screw (B).

GETtheMANUALS.org

Fig. 375: Removing Rack Guide Screw And Locknut Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the old sealant from the rack guide screw (A).
5. Apply new sealant (Three Bond 1215 or Loctite 5699) to the middle of the threads (B).

NOTE: **If the rack guide screw is not installed within five minutes after applying the sealant, remove the sealant and residue, and reapply new sealant.**

6. Loosely install the rack guide screw on the steering gearbox.

Fig. 376: Identifying Rack Guide Screw Sealant Applying Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Tighten the rack guide screw (A) to 25 N.m (2.5 kgf.m, 18 lbf.ft), then loosen it.
8. Retighten the rack guide screw to 3.9 N.m (0.40 kgf.m, 2.9 lbf.ft), then back it off to the specified angle.

GETtheMANUALS.org

Specified return angle: 12 1 °

9. Hold the rack guide screw stationary with a wrench, and tighten the locknut (B) by hand until it's fully seated.
10. Install the locknut wrench on the locknut, and hold the rack guide screw stationary with a wrench. Tighten the locknut to the specified torque.
11. Check for unusual steering effort through the complete turning range.

Fig. 377: Identifying Locknut Tightening Angle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Floor Undercover
    1. Install the front floor undercover (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

GETtheMANUALS.org

Fig. 378: Identifying Front Floor Undercover, Bolts And Clips With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Steering Wheel Rotational Play Check
    1. Set the front wheels in the straight ahead position.
    2. Measure how far you can turn the steering wheel left and right without moving the front wheels.
        - If the play is within the limit, the steering gearbox and the steering linkage are OK.
        - If the play exceeds the limit, adjust the rack guide. If the play is still excessive after rack guide adjustment, inspect the steering linkage and the steering gearbox.

        Rotational play: 0-10 mm (0-0.39 in)

GETtheMANUALS.org

Fig. 379: Identifying Steering Wheel Rotational Play
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Power Steering Assist Check

NOTE: **This test should be done with original equipment tires and wheels at the correct tire pressure.**

1. Start the engine, and let it idle.
2. Attach a commercially available spring scale (A) to the steering wheel. With the engine idling and the vehicle on a clean, dry floor, pull the scale as shown, and read it as soon as the tires begin to turn.

   Initial turning load: 34 N (3.5 kgf, 7.6 lbf)

3. If the scale reads no more than the specification, the power assist is OK. If it reads more, check these items:
   - Steering linkage
   - Rack guide adjustment
   - EPS system

GETtheMANUALS.org

Fig. 380: Checking Power Steering Initial Turning Load Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

STEERING TIE-ROD END BALL JOINT BOOT REPLACEMENT

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Ball Joint Remover, 28 mm 07MAC-SL00202

GETtheMANUALS.org

	Ball Joint Thread Protector, 12 mm 07AAF-SDAA100
	Bearing Driver Attachment, 42 mm 07QAD-P0A0100

GETtheMANUALS.org

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Front Wheel
    1. Remove the front wheel.

GETtheMANUALS.org

Fig. 381: Identifying Front Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Ball Joint - Removal

NOTE: **Always use a ball joint remover to disconnect a ball joint. Do not strike the housing or any other part of the ball joint connection to disconnect it.**

1. Install a hex nut (A) or the ball joint thread protector.

NOTE: **When using a hex nut, make sure the nut is flush with the ball joint pin end to prevent damage to the threaded end of the ball joint pin.**

Fig. 382: Identifying Hex Nut Or Ball Joint Thread Protector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply grease to the ball joint remover on the areas shown (A).

GETtheMANUALS.org

Fig. 383: Identifying Grease Applying Areas On Ball Joint Remover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the ball joint remover as shown.

NOTE:

- **Fasten the safety tie (A) securely to a suspension arm or the subframe (B).**
- **Making sure not to damage the ball joint boot.**

4. Tighten the pressure bolt until the ball joint pin pops loose from the ball joint connecting hole.

NOTE: **Do not use pneumatic or electric tools on the pressure bolt.**

5. Remove the ball joint remover.
6. Remove the hex nut or the ball joint thread protector.
7. Pull the ball joint out of the ball joint connecting hole.

GETtheMANUALS.org

Fig. 384: Fastening Safety Tie On Suspension Arm Or Subframe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tie-Rod End Ball Joint - Disconnection
    1. Remove the cotter pin (A).
    2. Remove the nut (B).
    3. Disconnect the tie-rod end ball joint.

Fig. 385: Identifying Cotter Pin And Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Tie-Rod End
    1. Loosen the locknut (A).
    2. Remove the tie-rod end (B), then remove the locknut.

GETtheMANUALS.org

Fig. 386: Identifying Tie-Rod End And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Tie-Rod End Ball Joint Boot
    1. Remove the ball joint boot (A) from the tie-rod end, and wipe the old grease off the ball pin.

Fig. 387: Identifying Ball Joint Boot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Tie-Rod End Ball Joint Boot
    1. Pack the lower area of the ball pin (A) with fresh multipurpose grease.
    2. Pack the interior of the new ball joint boot (B) and the lip (C) with fresh multipurpose grease.

    Note these items when installing new grease:

    - Keep grease off the boot mounting area (D) and the tapered section (E) of the ball pin.
    - Do not allow dust, dirt, or other foreign materials to enter the boot.

GETtheMANUALS.org

Fig. 388: Identifying Boot Mounting Grease Applying Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the ball joint boot (A) using the bearing driver attachment.
4. The ball joint boot must not have a gap at the ball joint boot installation sections (B).
5. After installing the ball joint boot, check the ball pin tapered section for grease contamination.
6. Wipe the ball pin tapered section if necessary.

Fig. 389: Installing Ball Joint Boot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Tie-Rod End
    1. Install the locknut (A).
    2. Install the tie-rod end (B), then tighten the locknut.

GETtheMANUALS.org

Fig. 390: Identifying Tie-Rod End And Locknut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tie-Rod End Ball Joint - Reconnection
    1. Connect the tie-rod end ball joint.
    2. Install the nut (A).
    3. Install the cotter pin (B) as shown.

Fig. 391: Identifying Cotter Pin And Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Wheel
    1. Install the front wheel.

NOTE: Before installing the wheel, clean the mating surfaces between the

GETtheMANUALS.org

brake disc and the inside of the wheel.

Fig. 392: Identifying Front Wheel With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Pre-Alignment Checks

   For proper inspection and adjustment of the wheel alignment, do these checks:

   1. Release the parking brake to avoid an incorrect measurement.
   2. Make sure the suspension is not modified.
   3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
   4. Check the tire size and tire pressure according to tire information.
   5. Set the steering column to the middle tilt position and telescopic position.
6. Front Toe - Inspection

   Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

   1. Set the steering column to the middle tilt position and telescopic positions.
   2. Center the steering wheel spokes, and install a steering wheel holder tool.
   3. Check the toe with the wheels pointed straight ahead.

      Front toe-in: 0±2 mm (0±0.08 in)

      - If adjustment is required, go to the front toe adjustment.
      - If no adjustment is required, remove the alignment equipment.

GETtheMANUALS.org

7. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 393: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

9. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

STEERING WHEEL DISASSEMBLY AND REASSEMBLY

EXPLODED VIEW

1. STEERING WHEEL EXPLODED VIEW

    EXPLODED VIEW

GETtheMANUALS.org

STEERING WHEEL REMOVAL AND INSTALLATION

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** , and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).

GETtheMANUALS.org

2. Disconnect and isolate the negative cable (A) from the battery.

NOTE: Always disconnect the negative side first.

3. Disconnect the positive cable (B) from the battery.
4. Wait at least 3 minutes before starting work.

Fig. 407: Identifying Battery Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Airbag
    1. Remove the access panel (A).
    2. Disconnect the driver's airbag inflator connector (B) on the cable reel harness.
    3. Disconnect the horn switch connector (C).

GETtheMANUALS.org

Fig. 408: Identifying Access Panel, Driver's Airbag Inflator Connector And Horn Switch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the TORX bolts using a TORX T30 bit.
5. Remove the driver's airbag (A).

Fig. 409: Identifying Driver's Airbag And Torx Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Steering Wheel Assembly
    1. Set the front wheels in the straight ahead position.
    2. Disconnect the connector (A).

GETtheMANUALS.org

3. Loosen the steering wheel bolt (B) three turns.

Fig. 410: Identifying Steering Wheel Connector And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install a commercially available steering wheel puller (A) on the steering wheel (B).
5. Free the steering wheel from the steering column shaft by turning the pressure bolt (C) of the puller.

   Note these items when removing the steering wheel:

   - Do not tap on the steering wheel or the steering column shaft when removing the steering wheel.
   - If you thread the puller bolts (D) into the wheel hub more than five threads, the bolts will hit the cable reel and damage it. To prevent this, install a pair of jam nuts five threads up on each puller bolt.

GETtheMANUALS.org

Fig. 411: Turning Steering Wheel Pressure Bolt Using Puller
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the steering wheel puller.
7. Remove the steering wheel (A) from the steering column.

Fig. 412: Identifying Steering Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** , and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Steering Wheel Assembly
    1. Make sure the front wheels are pointing straight ahead.

GETtheMANUALS.org

2. Center the cable reel (A). Do this by first rotating the cable reel clockwise until it stops.
3. Rotate the cable reel counterclockwise about three full turns. The arrow mark (B) on the cable reel label should point straight up.

Fig. 413: Identifying Cable Reel With Arrow Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Position the steering wheel hub (A) so that it engages the pin (B) of the cable reel.
5. Install the steering wheel (C) on to the steering column shaft.

NOTE: **Do not tap on the steering wheel or the steering column shaft when installing the steering wheel.**

Fig. 414: Identifying Steering Wheel, Hub And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

6. Install the steering wheel bolt (A), and tighten it to the specified torque.
7. Connect the connector (B).
8. Make sure the wire harness is routed and fastened properly.

Fig. 415: Identifying Steering Wheel Bolt And Connector With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Airbag

NOTE: If you are replacing a deployed driver's airbag, inspect the cable reel for heat damage. If there is any damage, replace the cable reel.

1. Place the driver's airbag (A) in the steering wheel.
2. Tighten the new TORX bolts using a TORX T30 bit.

NOTE: Make sure the clearance (B) between the steering wheel and the horn pad is the specified value.

GETtheMANUALS.org

Fig. 416: Identifying Driver Airbag With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 417: Identifying Clearance Between Steering Wheel And Horn Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the driver's airbag inflator connector (A) on the cable reel harness.
4. Connect the horn switch connector (B).

NOTE: **After reconnecting the negative cable to the battery, make sure the horn works properly.**

GETtheMANUALS.org

5. Install the access panel (C).

Fig. 418: Identifying Driver Airbag Inflator Connector, Horn Switch Connector And Access Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

GETtheMANUALS.org

Fig. 419: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Steering Wheel Spoke Angle - Check
    1. Check the steering wheel spoke angle.
    2. If steering spoke angles to the right and left are not equal (steering wheel is not centered), correct the engagement of the wheel/column shaft splines.
5. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

Fig. 420: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

7. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

STEERING WHEEL ROTATIONAL PLAY CHECK

CHECK

1. Steering Wheel Rotational Play Check
    1. Set the front wheels in the straight ahead position.
    2. Measure how far you can turn the steering wheel left and right without moving the front wheels.
        - If the play is within the limit, the steering gearbox and the steering linkage are OK.
        - If the play exceeds the limit, adjust the rack guide. If the play is still excessive after rack guide adjustment, inspect the steering linkage and the steering gearbox.

    Rotational play: 0-10 mm (0-0.39 in)

Fig. 421: Checking Steering Wheel Rotational Play

GETtheMANUALS.org

FRONT DOOR GLASS ADJUSTMENT

REMOVAL

1. Door Mirror Cover
    1. Carefully pry out the door mirror cover (A) with the appropriate trim tool to detach the clips (B), then remove the door mirror cover.
    2. With tweeter: Disconnect the connector (C).

Fig. 1: Removing Door Mirror Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connectors (E), then remove the power window switch panel.

GETtheMANUALS.org

Fig. 2: Removing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Panel
    1. Carefully pry out on the upper hook (A) in the inner handle cap (B) with the appropriate trim tool, then pull back the inner handle cap to remove it.

Fig. 3: Removing Front Door Panel Upper Hook Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. Remove the screws (A) securing the inner handle (B).

Fig. 4: Identifying Inner Handle And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pull pocket mat (A), then remove the screw (B).

Fig. 5: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Starting at the bottom edge of the door panel (A), detach the clips (B) with a commercially available trim pad remover.
5. Starting at the rear, pull the door panel upward.
6. Remove the inner handle (C) from the door panel, then remove the door panel.

GETtheMANUALS.org

Fig. 6: Removing Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Door Plastic Cover As Needed
    1. Disconnect the connector (A), then detach the harness clips (B).
    2. Remove the screws (C), then remove the pull pocket bracket (D).
    3. Remove the plug caps (E), then carefully detach the plastic cover (F) as needed.

NOTE: **If the plastic cover is damaged or torn, replace it.**

GETtheMANUALS.org

Fig. 7: Identifying Connector, Pocket Bracket, Plug Caps, Plastic Cover, Harness Clips And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ADJUSTMENT

1. Front Door Glass - Adjustment

NOTE:

- **Check the weatherstrip and the glass run channel for damage or deterioration, and replace them if necessary.**
- **Wipe the run channel clean with a shop towel.**

1. Place the vehicle on a firm, level surface.
2. Carefully move the glass (A) until you can see the glass mounting bolts (B), then loosen them.
3. Push the glass against the center lower channel (C), then tighten the glass mounting bolts.
4. Make sure that the glass moves smoothly.

GETtheMANUALS.org

Fig. 8: Moving Glass And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Raise the glass fully, and check for gaps. Also make sure that the glass (A) contacts the glass run channel (B) evenly.

Fig. 9: Checking Gap Between Glass And Glass Run Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Door Plastic Cover As Needed

GETtheMANUALS.org

1. Install the plastic cover (A), then install the plug caps (B).
2. Install the pull pocket bracket (C), then install the screws (D).
3. Connect the connector (E), then install the harness clips (F).

Fig. 10: Identifying Connector, Pocket Bracket, Plug Caps, Plastic Cover, Harness Clips And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Panel
    1. Install the inner handle (A) in the door panel (B).
    2. Install the door panel. Make sure the clips (C) snap into place securely.

GETtheMANUALS.org

FRONT DOOR GLASS REMOVAL AND INSTALLATION

REMOVAL

1. Door Mirror Cover
    1. Carefully pry out the door mirror cover (A) with the appropriate trim tool to detach the clips (B), then remove the door mirror cover.
    2. With tweeter: Disconnect the connector (C).

Fig. 17: Removing Door Mirror Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connectors (E), then remove the power window switch panel.

GETtheMANUALS.org

Fig. 18: Removing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Panel
    1. Carefully pry out on the upper hook (A) in the inner handle cap (B) with the appropriate trim tool, then pull back the inner handle cap to remove it.

Fig. 19: Removing Front Door Panel Upper Hook Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. Remove the screws (A) securing the inner handle (B).

Fig. 20: Identifying Inner Handle And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pull pocket mat (A), then remove the screw (B).

Fig. 21: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Starting at the bottom edge of the door panel (A), detach the clips (B) with a commercially available trim pad remover.
5. Starting at the rear, pull the door panel upward.
6. Remove the inner handle (C) from the door panel, then remove the door panel.

GETtheMANUALS.org

Fig. 22: Removing Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Door Plastic Cover
    1. Disconnect the connector (A), then detach the harness clips (B).
    2. Remove the screws (C), then remove the pull pocket bracket (D).
    3. Remove the plug caps (E), then carefully remove the plastic cover (F).

NOTE: **If the plastic cover is damaged or torn, replace it with a new one.**

GETtheMANUALS.org

Fig. 23: Identifying Connector, Pocket Bracket, Plug Caps, Plastic Cover, Harness Clips And Screws

4. Front Door Center Lower Channel
    1. Install the center lower channel (A), then install the bolt (B).

Fig. 37: Installing Center Lower Channel And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Door Glass Run Channel
    1. Align the notch (A) of the glass run channel with the alignment mark (B) on the body, then install the run channel all the way around.

GETtheMANUALS.org

Fig. 38: Installing Run Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Door Glass
    1. Install the glass (A) through the window slot, then install the glass mounting bolts (B). Take care not to drop the glass inside the door.

GETtheMANUALS.org

Fig. 39: Installing Front Door Glass
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Door Glass - Adjustment

NOTE:

- **Check the weatherstrip and the glass run channel for damage or deterioration, and replace them if necessary.**
- **Wipe the run channel clean with a shop towel.**

1. Place the vehicle on a firm, level surface.
2. Carefully move the glass (A) until you can see the glass mounting bolts (B), then loosen them.
3. Push the glass against the center lower channel (C), then tighten the glass mounting bolts.
4. Make sure that the glass moves smoothly.

GETtheMANUALS.org

Fig. 40: Moving Glass And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Raise the glass fully, and check for gaps. Also make sure that the glass (A) contacts the glass run channel (B) evenly.

Fig. 41: Checking Gap Between Glass And Glass Run Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Door Plastic Cover
    1. Install the plastic cover (A), then install the plug caps (B).
    2. Install the pull pocket bracket (C), then install the screws (D).

GETtheMANUALS.org

3. Connect the connector (E), then install the harness clips (F).

Fig. 42: Identifying Connector, Pocket Bracket, Plug Caps, Plastic Cover, Harness Clips And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Front Door Panel
    1. Install the inner handle (A) in the door panel (B).
    2. Install the door panel. Make sure the clips (C) snap into place securely.

GETtheMANUALS.org

Fig. 43: Installing Inner Handle To Door Panel

FRONT POWER WINDOW MOTOR REMOVAL AND INSTALLATION

REMOVAL

1. Door Mirror Cover
    1. Carefully pry out the door mirror cover (A) with the appropriate trim tool to detach the clips (B), then remove the door mirror cover.
    2. With tweeter: Disconnect the connector (C).

GETtheMANUALS.org

Fig. 57: Removing Door Mirror Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connectors (E), then remove the power window switch panel.

Fig. 58: Removing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Panel

GETtheMANUALS.org

1. Carefully pry out on the upper hook (A) in the inner handle cap (B) with the appropriate trim tool, then pull back the inner handle cap to remove it.

Fig. 59: Removing Front Door Panel Upper Hook Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the screws (A) securing the inner handle (B).

Fig. 60: Identifying Inner Handle And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pull pocket mat (A), then remove the screw (B).

GETtheMANUALS.org

Fig. 61: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Starting at the bottom edge of the door panel (A), detach the clips (B) with a commercially available trim pad remover.
5. Starting at the rear, pull the door panel upward.
6. Remove the inner handle (C) from the door panel, then remove the door panel.

Fig. 62: Removing Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

4. Front Door Plastic Cover
    1. Disconnect the connector (A), then detach the harness clips (B).
    2. Remove the screws (C), then remove the pull pocket bracket (D).

Fig. 63: Identifying Connector, Pocket Bracket, Plug Caps, Plastic Cover, Harness Clips And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Remove the plug caps (E), then carefully remove the plastic cover (F).

NOTE: If the plastic cover is damaged or torn, replace it with a new one.

5. Front Door Glass Support
    1. Carefully lower the glass (A) until you can see the glass mounting bolts (B), then remove them.

GETtheMANUALS.org

Fig. 64: Removing Front Door Glass
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Raise the glass (A), then secure the glass with tape (B). Take care not to drop the glass inside the door.

GETtheMANUALS.org

Fig. 65: Securing Glass Using Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Door Regulator
    1. Disconnect the connector (A) from the regulator (B).
    2. Remove the nuts (C).
    3. Remove the bolts (D), and loosen the bolts (E), then remove the regulator through the hole in the door.

Fig. 66: Identifying Door Regulator, Connector, Nuts And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Power Window Motor
    1. Remove the power window motor (A).

GETtheMANUALS.org

Fig. 67: Identifying Power Window Motor And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Power Window Motor

NOTE: **Screw threads are not tapped into the new power window motor. Install the new motor as follows, using the self-tapping screws (A) provided.**

1. Position the power window motor (B) under the regulator (C) as shown, and tighten the self-tapping screws until the screw heads just make contact with the linkage.

NOTE:
- **Keep the screws perfectly straight while screwing them in.**
- **Do not use an air tool or impact wrench to install the screws.**
- **Use only the self-tapping bolts provided with the motor.**

2. Loosen the screws, then retighten them to the specified torque.

GETtheMANUALS.org

Fig. 68: Identifying Power Window Motor, Regulator And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Regulator
    1. Apply multipurpose grease to the sliding surfaces of the regulator (A) where as shown.

Fig. 69: Identifying Multipurpose Grease Applying Area On Sliding Surfaces Of Regulator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the regulator (A) through the hole in the door, then install the nuts (B) and the bolts (C, D).
    3. Connect the connector (E) to the regulator.

GETtheMANUALS.org

Fig. 70: Identifying Door Regulator, Connector, Nuts And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Door Glass Support
    1. While holding the glass (A), remove the tape (B), then carefully lower the glass. Take care not to drop the glass inside the door.

GETtheMANUALS.org

AUTO REVERSE POWER WINDOW OPERATION MALFUNCTION

GETtheMANUALS.org

Power Windows Symptom Troubleshooting - Auto reverse power window operation malfunction

Fig. 87: Power Windows Symptom Troubleshooting Flow Chart (Auto Reverse Power Window Operation Malfunction)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Refer to the power windows system description in the construction and function guide.**

Incorrect actuation of the power window may occur in the following situations:

- AUTO UP/AUTO DOWN operation while the vehicle is driving over bad roads.
- AUTO UP/AUTO DOWN operation while the door is opening or closing.

1. Problem verification 1:

GETtheMANUALS.org

- 1. Start the engine.
- 2. Fully open the door glass using the power window AUTO DOWN switch.
- 3. Fully close the door glass using the power window AUTO UP switch.

Does the door glass reverse as it is closing?

YES : Go to step 3.

NO : Go to step 2.

2. Problem verification 2:
   - 1. Fully open the door glass using the power window AUTO DOWN switch.
   - 2. Fully close the door glass using the power window AUTO UP switch.

Does the door glass reverse at once, after it has closed completely?

YES : Go to **RESETTING THE POWER WINDOW CONTROL UNIT**.

NO : Intermittent failure, the power window is OK at this time.

3. Power window motor test:
   - 1. **Check the power window motor** See **DRIVER'S POWER WINDOW MOTOR TEST**, **FRONT PASSENGER'S POWER WINDOW MOTOR TEST** or **REAR POWER WINDOW MOTOR TEST**.

Is the power window motor OK?

YES : Go to step 4.

NO : **REPLACE THE POWER WINDOW MOTOR**.

4. Door glass/door glass outer weatherstrip/door sash/door regulator check:
   - 1. Remove the door panel and plastic cover, then remove the bolts holding the window glass to the regulator. See **Front Door Glass Adjustment**, **Rear Door Glass Adjustment**, **Front Door Regulator Removal and Installation** or **Rear Door Regulator Removal and Installation**
   - 2. Slide the window glass up and down in the run channel by hand and feel for any binding.

Does the window glass bind as it is moving up and down in the run channel?

YES : Repair or replace any parts necessary, then go to step 5.

NO : Go to **RESETTING THE POWER WINDOW CONTROL UNIT**, then recheck.

5. Power window operation check:
   - 1. **RESETTING THE POWER WINDOW CONTROL UNIT**.

GETtheMANUALS.org

- 2. Fully open the door glass using the power window AUTO DOWN switch.
- 3. Fully close the door glass using the power window AUTO UP switch.

Does the door glass reverse as it is closing?

YES : Troubleshooting is not complete; go to step 4 and recheck.

NO : Troubleshooting is complete; go to **RESETTING THE POWER WINDOW CONTROL UNIT**.

QUARTER GLASS REMOVAL AND INSTALLATION

REMOVAL

1. Rear Door Sill Trim
    1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
    2. Detach the hooks (A) and the tab (B) from the B-pillar lower trim (C) and the rear side trim panel (D), and pull up the rear door inner sill trim (E) by hand to detach the clips (F, G), then remove the trim.

Fig. 88: Removing Rear Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Door Opening Seal As Needed
    1. Pull out the rear door opening seal (A) from the trim hooks (B) around the rear door opening flange as needed.

GETtheMANUALS.org

Fig. 89: Removing Rear Door Opening Seal From Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tonneau Cover (For Some Models)
    1. Remove the tonneau cover (A).

Fig. 90: Removing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Cargo Floor Cover
    1. Remove the cargo floor cover (A).

GETtheMANUALS.org

Fig. 91: Removing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Tailgate Weatherstrip As Needed
    1. Detach the tailgate weatherstrip (A) as needed.

Fig. 92: Identifying Tailgate Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Trim Panel
    1. Remove the clips (A).
    2. Detach the hooks (B) and the tabs (C) from the rear side trim panels (D), and pull up the rear trim panel (E) by hand to detach the clips (F, G), then remove the rear trim panel.

GETtheMANUALS.org

Fig. 93: Removing Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Damper Maintenance Cover
    1. Fold down the rear seat-back.
    2. Pull up the rear damper maintenance cover (A) by hand to detach the hooks (B), then remove the rear damper maintenance cover.

Fig. 94: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Carpet Trim
    1. Detach the clips (A), then tuck up the rear seat-back cover (B).

13. Quarter Glass
    1. Remove the front seal (A) from the front edge of the quarter glass (B). If necessary, cut the seal with a utility knife.

Fig. 109: Removing Front Seal From Quarter Glass Front Edge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. If the original quarter glass (A) will be reinstalled, make alignment marks (B) across the glass and the body with a grease pencil over the quarter glass molding (C).

GETtheMANUALS.org

Fig. 110: Identifying Alignment Marks On Quarter Glass Molding
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Apply protective tape along the inside and outside edges of the body. From the pillar side of the vehicle, to cut the adhesive (A) with a utility knife (B).

Fig. 111: Applying Protective Tape On Inside And Outside Edges Of Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Make a hole with an awl through the adhesive from inside of the vehicle at the front corner of the quarter glass. Push a piece of piano wire through the hole, and wrap each end around a piece of wood.
5. With a helper on the outside, pull the piano wire (A) back and forth in a sawing motion. Hold the piano wire as close to the quarter glass (B) as possible to prevent damage to the body, and carefully cut through the adhesive (C) in the straight areas and the front corner, but not the rear corner.

GETtheMANUALS.org

Fig. 112: Making Hole On Quarter Glass Using Awl
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Cutting positions

Fig. 113: Identifying Cutting Positions On Quarter Glass

6. From inside of the vehicle, cut through the adhesive (A) of quarter glass rear corner with a utility knife (B).
7. Carefully remove the quarter glass.

GETtheMANUALS.org

Fig. 114: Cutting Adhesive Of Quarter Glass Rear Corner Using Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. If a new quarter glass will be installed, remove clips (A) from the body.

Fig. 115: Identifying Quarter Glass Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Quarter Glass
    1. Scrape smooth the original adhesive with a knife until there is a thickness of about 1 - 2 mm (0.04 - 0.08 in) on the bonding surface around the entire quarter glass opening flange.

        NOTE: Do not scrape down to the painted surface of the body; damaged paint will interfere with proper bonding.

    2. Clean the body bonding surface with a shop towel dampened with isopropyl alcohol. After cleaning, keep oil, grease, and water from getting on the surface.
    3. If you are reinstalling the original quarter glass, scrape off the original adhesive from the quarter

GETtheMANUALS.org

glass with a putty knife. Clean the bonding surfaces on the inside face and the edge of the quarter glass with isopropyl alcohol. Make sure the bonding surface is kept free of water, oil, and grease.

Fig. 116: Installing Front Seal And Adhesive Tape To Inside Face Of Quarter Glass
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Attach the front seal (A) with adhesive tape to the inside face of the quarter glass (B) as shown. Before installing the front seal, apply primer to the inside face of the quarter glass.

   NOTE: Be careful not to touch the quarter glass where the adhesive will be applied.

5. If you are installing a new quarter glass, set the quarter glass (A) in the opening, and make alignment marks (B) across the quarter glass and the body with a grease pencil at the three points shown. Make sure the pins (C) of the clips (D) contact with the edge of the body holes.

   NOTE: Be careful not to touch the quarter glass where the adhesive will be applied.

6. Remove the quarter glass.

GETtheMANUALS.org

Fig. 117: Locating Alignment Marks On Quarter Glass And Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Apply a light coat of primer along the edge of the quarter glass (A) and the front seal (B) as shown, then lightly wipe it off with gauze or cheesecloth:
    - Apply the primer to the rear corner, upper corner, and lower corner areas of the quarter glass using the printed dots (C) on the quarter glass as a guide.
    - Do not apply body primer to the quarter glass, and do not mix up the body primer applicator and the glass primer applicator.
    - Never touch the primed surfaces with your hands. If you do, adhesive may not bond to the quarter glass properly, causing a leak after the quarter glass is installed.
    - Keep water, dust, and abrasive materials away from the primed surfaces.

GETtheMANUALS.org

Fig. 118: Identifying Light Coat Of Primer Applying Area On Edge Of Quarter Glass And Front Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Carefully apply a light coat of body primer to any exposed paint or metal around the flange where new adhesive will be applied. Let the body primer dry for at least 10 minutes:
    - Do not apply body primer to any remaining original adhesive on the flange.
    - Do not mix up the body applicator and the glass primer applicator.
    - Never touch the primed surfaces with your hands.

GETtheMANUALS.org

Fig. 119: Identifying Light Coat Of Body Primer Applying Area On Exposed Paint Or Metal Around Flange
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Cut a "V" in the end of the nozzle (A) on the adhesive cartridge as shown.

Fig. 120: Identifying Cut End Of Nozzle On Adhesive Cartridge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Put the cartridge in a caulking gun, and run a continuous bead of the adhesive (A) around the edge of the quarter glass (B) and along the front seal (C) as shown:
    - Use the printed dots (D) on the quarter glass as a guide, apply adhesive to the rear corner, upper corner and the lower corner areas of the quarter glass.
    - Apply adhesive within 30 minutes after applying the primer.
    - Make a slightly thicker bead at each corner.

GETtheMANUALS.org

Fig. 121: Identifying Continuous Bead Of Adhesive Applying Area On Edge Of Quarter Glass And Front Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. If the original quarter glass will be reinstalled, apply adhesive (A) to the rear clip area as shown.

Fig. 122: Identifying Adhesive Applying Area On Rear Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

12. Hold the quarter glass (A) with suction cups (B) over the opening, align it with the clips (C) and alignment marks (D), and set it down on the adhesive. Lightly push on the quarter glass until its edges are fully seated on the adhesive all the way around.

NOTE: Do not open or close any of the doors for about an hour until the adhesive is dry.

13. Remove the excess adhesive with a putty knife or a shop towel dampened with isopropyl alcohol.
14. Wait at least an hour for the adhesive to dry, then spray water over the quarter glass and check for leaks. Mark the leaking areas, let the quarter glass dry, then seal with sealant. Let the vehicle stand for at least 4 hours after quarter glass installation. If the vehicle has to be used within the first 4 hours, it must be driven slowly.
15. Advise the customer not to do the following things for 2 to 3 days:
    - Slam the doors with all the windows rolled up.
    - Twist the body excessively (such as when going in and out of driveways at an angle or driving over rough, uneven roads).

Fig. 123: Removing Excess Adhesive From Quarter Glass Using Putty Knife Or Shop Towel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Quarter Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the quarter pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the quarter pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the quarter pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitening in the quarter pillar trim
            - Any cracks or stress-whitened areas in the clip seating surfaces (B)

GETtheMANUALS.org

- After checking and adjusting the overlap between the headliner and the quarter pillar trim, replace the upper clip (C) with a new one.
- If the clips (D) are damaged or stress-whitened, replace them with new ones.

Fig. 124: Identifying Quarter Pillar Trim, Clip And Seating Surfaces
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

GETtheMANUALS.org

Fig. 125: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

Fig. 126: Applying Masking Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

GETtheMANUALS.org

Fig. 127: Removing Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

Fig. 128: Cutting Headliner Using Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

4. Quarter Pillar Trim
    1. Install a new clip (A) to the quarter pillar trim (B).

GETtheMANUALS.org

Fig. 129: Installing Clip To Quarter Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pass the rear seat belt lower anchor (A) through the hole in the quarter pillar trim (B).
3. Fit the clips into the holes in the quarter pillar.
4. Lightly push the quarter pillar trim into place, then install the trim.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the ribs.**
- **Do not push too hard on the quarter pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the quarter pillar trim to verify that all clips are securely fastened.**
- **Make sure the clips (C, D, and E) snap into place securely.**

GETtheMANUALS.org

15. Rear Door Sill Trim
    1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
    2. Install the rear door inner sill trim (A). Make sure the clips (B, C), the hooks (D), and the tab (E) snap into place securely.

Fig. 150: Installing Rear Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Water Leak Test

GETtheMANUALS.org

Check for water leaks. Run water over the roof and on the sealing area as shown, and note these items:

- Use a 12 mm (0.47 in) diameter hose (A).
- Adjust the rate of water flow as shown.
- Do not use a nozzle.
- Hold the hose about 300 mm (11.81 in) away from the door.

Fig. 151: Checking Water Leakage On Roof Sealing Area

ADJUSTMENT

1. Rear Door Glass - Adjustment

NOTE:
- **Check the weatherstrip and the glass run channel for damage or deterioration, and replace them if necessary.**
- **Wipe the run channel clean with a shop towel.**

1. Place the vehicle on a firm, level surface.
2. Carefully move the glass (A) until you can see the glass mounting bolts (B), then loosen them.
3. Push the glass against the front side channel, then tighten the glass mounting bolts.
4. Make sure that the glass moves smoothly.

GETtheMANUALS.org

Fig. 159: Moving Glass And Mounting Bolts With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Door Panel
    1. Install the inner handle (A) in the door panel (B).
    2. Install the door panel. Make sure the clips (C) snap into place securely.

GETtheMANUALS.org

Fig. 186: Installing Inner Handle To Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the screw (A), then install the pull pocket mat (B).

Fig. 187: Identifying Pocket Mat And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the screws (A) securing the inner handle (B).

GETtheMANUALS.org

Fig. 188: Identifying Inner Handle And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the inner handle cap (A). Make sure the upper hook (B) and the lower hooks (C) snap into place securely.

Fig. 189: Installing Inner Handle Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the rear door quarter inner trim (A). Make sure the clip (B) and the hooks (C) snap into place securely.

GETtheMANUALS.org

Fig. 190: Installing Rear Door Quarter Inner Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Door Power Window Switch Panel
    1. Connect the connector (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 191: Installing Power Window Switch Panel

GETtheMANUALS.org

REAR POWER WINDOW SWITCH REMOVAL AND INSTALLATION

REMOVAL

1. Rear Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connector (E), then remove the power window switch panel.

Fig. 192: Removing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Power Window Switch
    1. Remove the rear power window switch (A).

GETtheMANUALS.org

Fig. 193: Identifying Rear Power Window Switch And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Power Window Switch
    1. Install the rear power window switch (A).

Fig. 194: Identifying Rear Power Window Switch And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Door Power Window Switch Panel
    1. Connect the connector (A), then install the power window switch panel (B). Make sure the clips (C)

GETtheMANUALS.org

and the hooks (D) snap into place securely.

Fig. 195: Installing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR POWER WINDOW SWITCH TEST

REMOVAL

1. Rear Door Power Window Switch Panel
    1. Carefully pry out on the notch (A) in the power window switch panel (B) with the appropriate trim tool to detach the clips (C) and the hooks (D). Disconnect the connector (E), then remove the power window switch panel.

GETtheMANUALS.org

Fig. 196: Removing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Rear Power Window Switch - Test
    1. Check for continuity between the terminals in each position according to the table.
    2. If the continuity is not as specified, replace the rear power window switch (A).

Fig. 197: Identifying Rear Passenger's Power Window Switch And Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Position \ Terminal	1	3	4	5	8
OFF	○	○	○	○	
UP	○	○	○		○
DOWN	○	○		○	○

Fig. 198: Rear Passenger's Power Window Switch Continuity Reference Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Door Power Window Switch Panel
    1. Connect the connector (A), then install the power window switch panel (B). Make sure the clips (C) and the hooks (D) snap into place securely.

Fig. 199: Installing Power Window Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR WINDOW REMOVAL AND INSTALLATION

REMOVAL

1. Tailgate Upper Trim Panel
    1. Carefully pry out the notch (A) in the tailgate upper trim (B) with the appropriate trim tool to detach the hooks (C) and the tabs (D) from the tailgate side trims (E), and pull back the tailgate

GETtheMANUALS.org

upper trim panel by hand to detach the clips (F), then remove the tailgate upper trim panel.

Fig. 200: Identifying Tailgate Upper Trim, Panel, Hooks, Notch And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Tailgate Side Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Detach the hook (A) and the tabs (B) from the tailgate lower trim panel (C), and pull back the tailgate side trim (D) by hand to detach the clips (E), then remove the tailgate side trim.

GETtheMANUALS.org

Fig. 201: Identifying Tailgate Lower Trim, Panel, Hooks, Tabs And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tailgate Lower Trim Panel
    1. Remove the screw (A), then remove the tailgate pull pocket (B).

Fig. 202: Identifying Tailgate Pull Pocket And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Pull out the tailgate lower trim panel (A) by hand to detach the clips (B, C), then remove the

GETtheMANUALS.org

tailgate lower trim panel.

Fig. 203: Identifying Tailgate Lower Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear License Trim
    1. Remove the bolts (A).

Fig. 204: Identifying Rear License Trim Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Spray soapy water solution onto the double-sided adhesive tape (A), then carefully cut the adhesive tape along the lower edge of the rear license trim (B) with a utility knife while separating the trim

GETtheMANUALS.org

from the tailgate (C) with a trim tool.

NOTE: Apply protective tape (D) around the cutting area as shown.

Fig. 205: Applying Protective Tape On Rear License Trim Cutting Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull out the rear license trim (A) with the appropriate trim tool to release the clip pins (B) of the clips (C) from the clip grommets (D) on the tailgate, and detach the clips (E), then remove the rear license trim from the tailgate.

NOTE: The clip grommets will stay on the tailgate.

GETtheMANUALS.org

Fig. 206: Identifying Rear License Trim Clips And Grommets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the clip grommets (A) from the tailgate.
5. Install the clip grommets into the clip pins on the rear license trim.

NOTE: **If the clip pins and the clip grommets are damaged or stress-whitened, replace them as an assembly with new ones.**

Fig. 207: Removing Clip Grommets From Tailgate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Window Wiper Arm Assembly
   1. Raise the wiper arm (A) off the rear window, then remove the cover (B), the nut (C), and the wiper arm.

Fig. 208: Identifying Rear Window Wiper Arm, Cover And Nut With Torque Specification

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Window Wiper Motor
    1. Disconnect the connector.
    2. Remove the rear window wiper motor (A).

Fig. 209: Identifying Rear Window Wiper Motor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Window
    1. Remove the rubber dams (A, B) from the edges of the rear window (C). If necessary, cut the rubber dams with a utility knife.

GETtheMANUALS.org

Fig. 210: Removing Rubber Dams From Rear Window Edges
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the connectors (A).

Fig. 211: Identifying Rear Window Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the original rear window will be reinstalled, make alignment marks (A) across the glass and the body with a grease pencil.

GETtheMANUALS.org

Fig. 212: Identifying Alignment Marks On Glass And Body Using Grease Pencil
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Apply protective tape along the inside and the outside edges of the tailgate. Make a hole with an awl through the adhesive from inside of the vehicle at the corner portion of the rear window. Push a piece of piano wire through the hole, and wrap each end around a piece of wood.
5. With a helper on the outside, pull the piano wire (A) back and forth in a sawing motion. Hold the piano wire as close to the rear window (B) as possible to prevent damage to the tailgate, and carefully cut through the adhesive (C) around the entire rear window.

Fig. 213: Cutting Adhesive From Rear Window Corner Portion
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Carefully remove the rear window.

Cutting positions

GETtheMANUALS.org

Fig. 214: Identifying Rear Window Adhesive Cutting Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Window
    1. Scrape smooth the original adhesive with a knife until there is a thickness of about 1~2 mm (0.04~0.08 in) on the bonding surface around the entire rear window opening flange:
        - Do not scrape down to the painted surface of the body; damaged paint will interfere with proper bonding.
        - Remove the fasteners or spacers from the tailgate.
    2. Clean the body bonding surface with a shop towel dampened in isopropyl alcohol. After cleaning, keep oil, grease, and water from getting on the surface.
    3. If you are reinstalling the original rear window, scrape off all of the original adhesive, the fasteners, the spacers (Sayama products), and the rubber dams from the rear window with a putty knife. Clean the bonding surface on the inside face and the edge of the rear window with isopropyl alcohol. Make sure the bonding surface is kept free of water, oil, and grease
    4. Except '14 Mexico factory model: Cut the rubber dam (A) to correct length according to the table.

Rubber dam	Length	QTY
A	900 mm (35.43 in)	1

Except '14 Mexico Factory Model

GETtheMANUALS.org

Fig. 215: Identifying Rear Window Corner Molding, Rubber Dam And Fasteners (Except '14 Mexico Factory Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. '14 Mexico factory model: Cut the rubber dams (A, C) to correct length according to the table.

Rubber dam	Length	QTY
A	900 mm (35.43 in)	1
C	190 mm (7.48 in)	2

6. Apply a primer to the fasteners and the rubber dams mounting areas on the rear window, and let it dry. Attach rubber dam (A), the corner molding (B) (except '14 Mexico factory model), rubber dams (C), rubber dam (D), and the fasteners (E, F) with the adhesive tape to the inside face of the rear window (G) as shown.
   - Be sure the fasteners line up with alignment marks (H).
   - Be careful not to touch the rear window where the adhesive will be applied.
   - Except '14 Mexico factory model: First attach the corner molding (B), then attach rubber dam (A) and rubber dams (C) around the edge of the rear window. Make sure edges of rubber dam (A) contact with the edges of the corner molding (B). If necessary, cut rubber dam (A) with a

GETtheMANUALS.org

utility knife.

- '14 Mexico factory model: Make sure that there is no clearance between rubber dam (A) and rubber dams (C)
- Cut the excess rubber dams (C) along both beveled edges of the rear window.

'14 Mexico Factory Model

Fig. 216: Identifying Rear Window Corner Molding, Rubber Dam And Fasteners ('14 Mexico Factory Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Attach the fasteners (A, B) with adhesive tape to the tailgate as shown.

GETtheMANUALS.org

Fig. 217: Identifying Tailgate Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. If you are installing a new rear window, set the rear window (A) in the opening, and center it. Make alignment marks (B) across the rear window and the body with a grease pencil at the four points shown. Make sure the pins (C) of both clips (D) contact with the holes of the tailgate corner. Be careful not to touch the rear window where the adhesive will be applied.
9. Remove the rear window.

GETtheMANUALS.org

Fig. 218: Making Alignment Marks On Rear Window And Body Using Grease Pencil
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Apply a light coat of primer to the rear window (A) along the edge of the rubber dams (B) and the corner molding as shown, then lightly wipe it off with gauze or cheesecloth:
    - Apply the primer to the corner portions of the rear window using the printed dots (C) on the rear window as a guide.
    - Do not apply body primer to the rear window, and do not mix up the body primer applicator and the glass primer applicator.

    Except '14 Mexico Factory Model

GETtheMANUALS.org

Fig. 219: Identifying Primer Applying Area On Rear Window (Except '14 Mexico Factory Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Never touch the primed surfaces with your hands. If you do, the adhesive may not bond to the rear window properly, causing a leak after the rear window is installed.
- Keep water, dust, and abrasive materials away from the primed surface.

'14 Mexico Factory Model

GETtheMANUALS.org

Fig. 220: Identifying Primer Applying Area On Rear Window ('14 Mexico Factory Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Carefully apply a light coat of body primer to any exposed paint or metal around the flange where the adhesive will be applied. Let the body primer dry for at least 10 minutes:
    - Do not apply body primer to any remaining original adhesive on the flange.
    - Do not mix up the body primer applicator and the glass primer applicator.
    - Never touch the primed surfaces with your hands.

GETtheMANUALS.org

Fig. 221: Identifying Light Coat Of Body Primer Applying Area On Exposed Paint Or Metal Around Flange
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Cut a "V" in the end of the nozzle (A) on the adhesive cartridge as shown.

Fig. 222: Identifying Cut End Of Nozzle On Adhesive Cartridge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Put the cartridge in a caulking gun, and run a continuous bead of the adhesive (A) around the rear window (B) along the edge of the rubber dams (C) as shown:
    - Use the printed dots (D) as a guide when you apply the adhesive to the corners of the rear window.
    - Apply the adhesive within 30 minutes after applying the primer. Make a slightly thicker bead at each corner.
14. Hold the rear window with suction cups over the opening, align it with the alignment marks, and set it down on the adhesive. Lightly push on the rear window until its edges are fully seated on the adhesive all the way around.

GETtheMANUALS.org

NOTE: **Do not open or close any of the doors for about an hour until the adhesive is dry.**

15. Remove the excess adhesive with a putty knife or a shop towel dampened with isopropyl alcohol.
16. Wait at least an hour for the adhesive to dry, then spray water over the rear window and check for leaks. Mark the leaking areas, let the rear window dry, then seal with sealant. Let the vehicle stand for at least 4 hours after rear window installation. If the vehicle has to be used within the first 4 hours, it must be driven slowly.
17. Advise the customer not to do the following things for 2 to 3 days:
    - Slam the doors with all the windows rolled up.
    - Twist the body excessively (such as when going in and out of driveways at an angle or driving over rough, uneven roads).

Except '14 Mexico Factory Model

Fig. 223: Identifying Continuous Bead Of Adhesive Applying Area On Rear Window And Edge Of Rubber Dams (Except '14 Mexico Factory Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

'14 Mexico Factory Model

GETtheMANUALS.org

Fig. 224: Identifying Continuous Bead Of Adhesive Applying Area On Rear Window And Edge Of Rubber Dams ('14 Mexico Factory Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Connect the connectors (A).

Fig. 225: Identifying Rear Window Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. Rear Window Wiper Motor
    1. Align the position marks when installing the seal (A), then install the washer (B) and rear window motor (C).
    2. Connect the connector.

NOTE: **Before reinstalling the rear wiper arm, turn the rear window wiper switch ON, then OFF to return the wiper shaft to the park position.**

Fig. 226: Exploded View Of Rear Window Wiper Motor With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Window Wiper Arm Assembly
    1. Install the wiper arm (A), the nut (B), and the cover (C).

GETtheMANUALS.org

Fig. 227: Identifying Rear Window Wiper Arm, Cover And Nut With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear License Trim
    1. If you are reusing the original rear license trim (A), apply PP primer to the areas where new double-sided adhesive tapes (B, C) will be applied, then attach the new double-sided adhesive tapes to the trim as shown.

       Adhesive tape (B): Thickness 3 mm (0.12 in)

       Width 4 mm (0.16 in)

       Length 255 mm (10.04 in)

       Adhesive tape (C): Thickness 2 mm (0.08 in)

       Width 5 mm (0.20 in)

       Length 177 mm (6.97 in)

Fig. 228: Identifying Adhesive Tape Applying Area On Rear License Trim

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Fold the edge of each adhesive backing from the double-sided adhesive tape.
3. Hold up the rear license trim (A), and fit the clips (B, C) into the holes in the tailgate. Push on the trim until the clips snap into place securely.

Fig. 229: Identifying Rear License Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the bolts (A).

GETtheMANUALS.org

Fig. 230: Identifying Rear License Trim Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Tailgate Lower Trim Panel
    1. Hold up the tailgate lower trim panel (A), and fit the clips into the holes in the tailgate.
    2. Push on the trim until the clips (B, C) securely snap into place.

Fig. 231: Identifying Tailgate Lower Trim Panel And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the tailgate pull pocket (A), then install the screw (B).

GETtheMANUALS.org

Fig. 232: Identifying Tailgate Pull Pocket And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Tailgate Side Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the tailgate side trim (A). Make sure the hook (B), the tabs (C), and the clips (D) snap into place securely.

GETtheMANUALS.org

Fig. 233: Identifying Tailgate Side Trim, Hook, Tabs And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Tailgate Upper Trim Panel
    1. Install the tailgate upper trim panel (A). Make sure the hooks (B), the tabs (C), and the clips (D) snap into place securely.

Fig. 234: Identifying Tailgate Upper Trim Panel, Hooks, Tabs And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Window Wiper Arm/Nozzle - Adjustment

NOTE:

- **Adjust the washer nozzle by gently gripping, and then moving, the outside of the nozzle (A).**
- **Do not insert tools into the nozzle hole (B), as it may cause the washer fluid to spray incorrectly.**

Wiper Arm Park Position

1. Turn the ignition switch to ON (II), then turn the wiper switch ON, and then back OFF.

GETtheMANUALS.org

Fig. 235: Identifying Wiper Arm Park Position From Rear Window Center Line
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. When the wiper arm stops at the auto-stop position, make sure that it is at the correct position:
   a. Wiper arm stop position on the rear window defogger.

Washer Nozzle Position

3. When you turn on the washer, make sure 50% or more of the washer fluid lands within the spray area. If the spray area is not within the standard positions, adjust the nozzle:

   b: Position at about 108.5 mm (4.27 in) from the rear window center line (C).

   c: Position at about 21.2 mm (0.83 in) from the top of the black ceramic area (D).

   d: Position at about 21.9 mm (0.86 in) from the position (c).

9. Water Leak Test

GETtheMANUALS.org

Check for water leaks. Run water over the roof and on the sealing area as shown, and note these items:

- Use a 12 mm (0.47 in) diameter hose (A).
- Adjust the rate of water flow as shown.
- Do not use a nozzle.
- Hold the hose about 300 mm (11.81 in) away from the door.

Fig. 236: Checking Water Leakage On Roof Sealing Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

RESETTING THE POWER WINDOW CONTROL UNIT

PROCEDURE

1. Power Window Control Unit - Reset

Resetting the power window is required when any of the following have occurred:

- Power window regulator replacement or repair
- Power window motor replacement or repair
- Glass run channel replacement
- Driver's door glass replacement
- Power window master switch replacement

1. Turn the ignition switch to ON (II).
2. Move the driver's window all the way down with the driver's window DOWN switch.
3. Open the driver's door.

NOTE: Steps 4-7 must be done within 5 seconds of each other.

GETtheMANUALS.org

Fig. 237: Ignition Switch And Driver's Window Down Switch Blinking Pattern
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Turn the ignition switch to LOCK (0).
5. Push and hold the driver's window DOWN switch.
6. Turn the ignition switch to ON (II).
7. Release the driver's window DOWN switch.
8. Repeat steps 4-7 three more times.
9. Confirm that AUTO UP and AUTO DOWN do not work. If AUTO UP and DOWN work, go back to step 1.
10. Pull up and hold the driver's window UP switch until the window reaches the fully closed position, then continue to hold the switch for at least 1 second.
11. Confirm that the power window control unit is reset by using the driver's window AUTO UP and AUTO DOWN functions:
    - If the window still does not work in AUTO, repeat the procedure several times, paying close attention to the 5 second time limit between steps.
    - If the window still does not work, refer to the **MASTER SWITCH INPUT TEST**.

WINDSHIELD REMOVAL AND INSTALLATION

REMOVAL

1. Both Windshield Wiper Arm Assemblies

NOTE: Set the wiper arms to the auto-stop position before removal.

1. Remove the caps (A) and nuts (B).
2. Remove the wiper arms (C).

GETtheMANUALS.org

Fig. 238: Identifying Wiper Arms, Caps And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Fender Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Remove the clips (A, B).
2. Pull up the front fender trim (C) by hand to detach the clips (D), then remove the trim.

Fig. 239: Identifying Front Fender Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

3. Cowl Top Cover - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Remove the clip (A).
2. Pull out the hood rear seal (B).
3. Detach the hooks, and remove the cowl top cover (C).

Fig. 240: Identifying Hood Rear Seal, Cowl Top Cover And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Side Cowl Cover - Both Sides

NOTE: Repeat on the opposite side.

1. Detach the hook (A) at the inside of the cowl cover (B).
2. Release the hooks (C) from the cowl cover and the front fender (D), then remove the side cowl cover (E).
3. Right side; Detach the windshield washer tube.

GETtheMANUALS.org

Fig. 241: Removing Front Fender Cowl Cover Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Center Cowl Cover
    1. Remove the clips (A).
    2. Carefully pull the center cowl cover (B) forward to release the hooks (C) from the windshield and the body.

GETtheMANUALS.org

Fig. 242: Identifying Center Cowl Cover, Hook And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Door Opening Seal As Needed - Both Sides

NOTE: Repeat on the opposite side.

1. Pull out the front door opening seal (A) from the trim hooks (B) around the front door opening flange, then detach the seal as needed.

Fig. 243: Pulling Out Front Door Opening Seal From Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

7. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the A-pillar trim (A) by hand to release the clips (B, C).

Fig. 244: Pulling Out A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Put a shop towel (A) in the opening between the A-pillar trim (B) and the dashboard to prevent dropping the A-pillar clips.

Fig. 245: Inserting Shop Towel In Opening Between A-Pillar Trim And Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull out and up on the A-pillar trim (A) to release it from the dashboard.

GETtheMANUALS.org

NOTE: **The upper clip will stay in the body.**

Fig. 246: Pulling Out A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the upper clip (A) from the body.

Fig. 247: Removing Upper Clip From Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rearview Mirror

Without auto dimming mirror

1. Using a plastic trim tool, press down on the tab, slide the mirror base (A) rearward, then remove the rearview mirror.

GETtheMANUALS.org

Fig. 248: Sliding Mirror Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With auto dimming mirror

1. Carefully pry out the rearview mirror harness cover (A) to release the hooks (B), then slide the cover rearward.
2. Release the rearview mirror harness cover from the hooks (C) of the rearview mirror harness cover base (D).

Fig. 249: Identifying Rearview Mirror Harness Cover, Base And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the rearview mirror connector (A).

GETtheMANUALS.org

Fig. 250: Identifying Rearview Mirror Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Loosen the screw (A) with a TORX T20 bit, then slide the rearview mirror (B) rearward and off the mount (C).

Fig. 251: Identifying Rearview Mirror, Mount And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Sunvisor - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Push the tab (A) with a flat-tip screwdriver through the hole in the front side of the bracket cover (B).

GETtheMANUALS.org

NOTE: **Make sure the tab is unlocked.**

Fig. 252: Pushing Sunvisor Tab Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While pushing in the tab (A) with a flat-tip screwdriver, release the sunvisor (B) from the holder (C), and rotate the sunvisor backward 45 °.

NOTE: **Make sure the tab slides into the bracket cover as you rotate the sunvisor.**

Fig. 253: Removing Sunvisor From Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connector (A), then remove the sunvisor (B).

GETtheMANUALS.org

NOTE: **If the sunvisor cannot be removed, the tab has not rotated into the bracket cover. Repeat step 2 to rotate the tab.**

Fig. 254: Identifying Sunvisor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Sunvisor Holder - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Turn the sunvisor holder (A) 45 ° counterclockwise, then remove it from the holder grommet (B).

Fig. 255: Turning Sunvisor Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the holder grommet (A).

GETtheMANUALS.org

Fig. 256: Identifying Holder Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Roof Console Assembly
    1. Remove the lenses (A), then remove the screws (B).
    2. Open the console, then remove the screws (C).
    3. Disconnect the connectors (D), then remove the roof console assembly (E).

Fig. 257: Identifying Roof Console Assembly, Connectors And Mounting Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

12. Headliner As Needed - Front Side
    1. Detach the front area of the headliner (A) as needed.

Fig. 258: Disconnecting Front Area Of Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Roof Molding - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Carefully insert the large trim tool (A) under the molding next to the lower clip (B).
2. While pulling up the clip area of the molding by hand, push each of the six small hooks (C) to release the clip from the retainer (D) on the A-pillar. Do not pry up the clip if it is hard to release it from the clip on the A-pillar.
3. Gradually work your way up to release each of the upper clips (E, F, G).

GETtheMANUALS.org

Fig. 259: Inserting Large Trim Tool Under Molding
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Start from the front to the rear, carefully insert a trim tool in under the roof molding (A) next to each of the retainers (B, C). Slide and pry up the retainers to release it with the clips from the stud bolts (D) and the pins (E) on the body.

GETtheMANUALS.org

Fig. 260: Removing Roof Molding From Body Using Trim Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Slide the rear end of the roof molding (A) forward to release it from the body, then remove the roof molding from the body.

Fig. 261: Removing Roof Molding From Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

6. Pry up the middle hooks (A) with a flat-tip screw driver to release the retainer (B) from the roof molding (C).

Fig. 262: Releasing Retainer From Roof Molding
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Roof Rail - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Remove the caps (A). (4 Places)

Fig. 263: Identifying Roof Rail Caps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the roof rail (A).

GETtheMANUALS.org

Fig. 264: Identifying Roof Rail Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Side Windshield Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Carefully insert the large trim tool (A) under the trim next to the lower clip (B).
2. While pulling up the clip area of the trim by hand, push each of the six small hooks (C) to release the clip from the retainer (D) on the A-pillar. Do not pry up the clip if it is hard to release it from the clip on the A-pillar.
3. Gradually work your way up to release each of the upper clips (E, F, G).

GETtheMANUALS.org

Fig. 265: Inserting Large Trim Tool Under Side Windshield Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Windshield
    1. Remove the windshield molding (A) from the upper edge of the windshield (B). If necessary, cut the windshield molding with a utility knife.

GETtheMANUALS.org

Fig. 266: Removing Windshield Molding From Upper Edge Of Windshield
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If the original windshield will be reinstalled, make alignment marks (A) across the glass and the body with a grease pencil.
3. Apply protective tape along the edge of the dashboard and the body. Make a hole with an awl through the rubber dam, the adhesive, and the dashboard seal from inside of the vehicle at a corner portion of the windshield. Push a piece of piano wire through the hole, and wrap each end around a piece of wood.

Fig. 267: Identifying Alignment Marks On Windshield Glass And Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With a helper on the outside, pull the piano wire (A) back and forth in a sawing motion. Hold the piano wire as close to the windshield (B) as possible to prevent damage to the body and the dashboard. Carefully cut through the rubber dam and the adhesive (C) around the entire windshield.
5. Carefully remove the windshield.

GETtheMANUALS.org

Fig. 268: Removing Windshield Using Piano Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Cutting positions

Fig. 269: Identifying Windshield Cutting Positions
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Windshield
    1. Scrape smooth the original adhesive with a knife until there is a thickness of about 1~2 mm (0.04~0.08 in) on the bonding surface around the entire windshield opening flange:
        - Do not scrape down to the painted surface of the body; damaged paint will interfere with proper bonding.
        - Remove the rubber dam and the fasteners from the body.
    2. Clean the body bonding surface with a shop towel dampened in isopropyl alcohol. After cleaning, keep oil, grease, and water from getting on the clean surface.
    3. If you are reinstalling the original windshield, scrape off all of the original adhesive, the clips, the dashboard seal, and the rubber dam from the windshield with a putty knife. Clean the boning surface on the inside face and the edge of the windshield with isopropyl alcohol. Make sure the

GETtheMANUALS.org

bonding surface is kept free of water, oil, and grease.

4. Cut the side rubber dams (B) to correct length according to the table.

Length	QTY
970 mm (38.19 in)	3

5. Apply primer to the upper clip and the rubber dams mounting areas on the windshield (A), and let it dry. Remove the adhesive backing, and attach the side rubber dams (B) and the upper clips (C) to the inside face of the windshield as shown:

Fig. 270: Identifying Primer Applying Areas On Upper Clip And Rubber Dams Mounting Areas Of Windshield
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Be sure the rubber dams and the clips line up with the alignment marks (D, E, and F).
- Be careful not to touch the windshield where the adhesive will be applied.

6. Cut the dashboard seal (A) to correct length according to the table.

Length	QTY
1350 mm (53.15 in)	1

GETtheMANUALS.org

7. Attach the dashboard seal (A) with adhesive tape to the inside surface of the windshield (B) as shown, using the edge of the black ceramic-coated area (C) as shown:
   - Make sure the dashboard seal lines up with the alignment marks (D).
   - Be careful not to touch the windshield where the adhesive will be applied.

Fig. 271: Identifying Dashboard Seal And Black Ceramic-Coating Applying Areas On Windshield
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Attach the windshield molding (A) with adhesive tape (B) to the upper edge of the windshield (C).

NOTE: **Be careful not to touch the windshield where the adhesive will be applied.**

GETtheMANUALS.org

Fig. 272: Connecting Windshield Molding And Adhesive Tape On Upper Edge Of Windshield
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Set the windshield (A) in the opening, and center it. Make alignment marks (B) across the windshield and the body with a grease pencil at the four points shown:
    - Make sure both clips (C) contact with the edge of the body holes.
    - Be careful not to touch the windshield where the adhesive will be applied.
10. Remove the windshield.

Fig. 273: Identifying Alignment Marks On Windshield Glass And Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Apply a light coat of primer along the edge of the windshield (A) between the rubber dam (B) and the windshield molding (C) as shown, then lightly wipe it off with gauze or cheesecloth:
    - Apply the primer to around edge of the windshield using the printed dots (D) on the windshield as a guide.
    - Do not apply body primer to the windshield, and do not mix up the body primer applicator and the glass primer applicator.
    - Never touch the primed surfaces with your hands. If you do, the adhesive may not bond to the windshield properly, causing a leak after the windshield is installed.
    - Keep water, dust, and abrasive materials away from primed surfaces.

GETtheMANUALS.org

Fig. 274: Identifying Primer Applying Areas On Windshield Between Rubber Dam And Windshield Molding
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Carefully apply a light coat of the body primer to any exposed paint or metal on the windshield mounting flange. Let the body primer dry for at least 10 minutes:
    - Do not apply the glass primer to any remaining original adhesive on the flange.
    - Cover on the dashboard before applying the body primer.
    - Do not to mix up the body primer applicator and the glass primer applicator.
    - Never touch the primed surfaces with your hands.

GETtheMANUALS.org

Fig. 275: Identifying Body Primer Applying Areas On Windshield Mounting Flange
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Cut a "V" in the end of the nozzle (A) on the adhesive cartridge as shown.

Fig. 276: Identifying Adhesive Cartridge Cutting Dimensions
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Put the cartridge in a caulking gun, and run a continuous bead of the adhesive (A) around the edge of the windshield (B) along the edge of the rubber dam (C) and the windshield molding (D) as shown:
    - Use the printed dots (E) as a guide when you apply the adhesive to the windshield.
    - Apply the adhesive within 30 minutes after applying the primer.
    - Make a slightly thicker bead at each corner.
15. Hold the windshield with suction cups over the opening, align it with the alignment marks and set it down on the adhesive. Lightly push on the windshield until its edges are fully seated on the adhesive all the way around.

NOTE: **Do not open or close any of the doors for about an hour until the adhesive is dry.**

GETtheMANUALS.org

16. Remove the excess adhesive with a putty knife or a shop towel dampened with isopropyl alcohol.
17. Wait at least an hour for the adhesive to dry, then spray water over the windshield and check for leaks. Mark the leaking areas, let the windshield dry, then seal with sealant: Let the vehicle stand for at least 4 hours after windshield installation. If the vehicle has to be used within the first 4 hours, it must be driven slowly.

Fig. 277: Identifying Adhesive Applying Areas On Windshield
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Advise the customer not to do the following things for 2 to 3 days:
    - Slam the doors with all the windows rolled up.
    - Twist the body excessively (such as when going in and out of driveways at an angle or driving over rough, uneven roads).

2. Side Windshield Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the side windshield trim (A).

GETtheMANUALS.org

Fig. 278: Installing Side Windshield Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Roof Rail - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the roof rail (A), then install the nuts (B).

Fig. 279: Identifying Roof Rail And Nuts With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the caps (A). (4 Places)

GETtheMANUALS.org

Fig. 280: Identifying Roof Rail Caps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Roof Molding - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the retainers (A) to the pins (B) on the body. (4 places)

Fig. 281: Installing Retainers And Pins On Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Slide the rear end of the roof molding (A) rearward to install it to the body.

GETtheMANUALS.org

Fig. 282: Installing Roof Molding On Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Push on the clip areas (A) of the roof molding (B) until the clips lock into the retainers (C) securely, and the retainer (D) into the stud bolts (E).
4. Make sure the roof molding is installed securely.

Fig. 283: Installing Roof Molding, Clips, Retainers And Stud Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Headliner As Needed - Front Side

GETtheMANUALS.org

1. Install the headliner (A).

Fig. 284: Installing Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Roof Console Assembly
    1. Connect the connectors (A), then install the roof console assembly (B).
    2. Install the screws (C, D), then install the lenses (E).

Fig. 285: Identifying Roof Console Assembly, Connectors, Lenses And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Sunvisor Holder

GETtheMANUALS.org

1. Install the holder (A) into the holder grommet (B) by turning it 45 ° clockwise.
2. Install the holder and the holder grommet as an assembly into the body by pushing it until the hooks snap into place securely.

Fig. 286: Identifying Sunvisor Holder And Holder Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Sunvisor - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Connect the connector (A), and install the sunvisor (B).

Fig. 287: Identifying Sunvisor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While holding the bracket cover (A), rotate the sunvisor (B) forward until the tab (C) snaps into place.
3. Gently pull down on the sunvisor to make sure it is properly secured in the body.
4. Rotate the sunvisor into the holder (D).

GETtheMANUALS.org

Fig. 288: Rotating Sunvisor Into Bracket Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Rearview Mirror

Without auto dimming mirror

1. Fit the mirror base (A) over the mount (B), and secure the rearview mirror.

Fig. 289: Fitting Mirror Base Over Mount
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With auto dimming mirror

1. Slide the rearview mirror (A) forward to the mount (B), then tighten the screw (C) with the TORX T20 bit.

NOTE: **Before installing the mirror, remove the screw, and apply medium strength liquid thread lock to it.**

GETtheMANUALS.org

Fig. 290: Identifying Rearview Mirror, Mount And Screw With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the rearview mirror connector (A).

Fig. 291: Identifying Rearview Mirror Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the rearview mirror harness cover (A). Make sure the hooks (B, C) snap into place securely.

GETtheMANUALS.org

Fig. 292: Identifying Rearview Mirror Harness Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. A-Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the A-pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the A-pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the A-pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitened areas in the A-pillar trim
            - Any cracks or stress-whitening in the clip seating surfaces (B)
        - After checking and adjusting the overlap between the headliner and the A-pillar trim, replace the upper clip (C) with a new one.
        - If the clips (D) are damaged or stress-whitened, replace them with new ones.

GETtheMANUALS.org

Fig. 293: Installing Upper Clip Into Clip Seating Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

Fig. 294: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

This illustration shows the A-pillar .

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

Fig. 295: Applying Masking Tape To Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

Fig. 296: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

- Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
- Remove the tape, and install the pillar trim.

GETtheMANUALS.org

Fig. 297: Trimming Headliner Using Knife
Courtesy of AMERICAN HONDA MOTOR CO., INC.

This illustration shows the A-pillar .

12. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Carefully install a new upper clip (A) to the A-pillar trim (B).

Fig. 298: Installing Upper Clip Into A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the bottom portion of the A-pillar trim (A) into the dashboard (B). Place the trim over the A-pillar (C), and fit its upper clip (D) and the other clips (E) into the holes (F) in the A-pillar, then

GETtheMANUALS.org

lightly push the trim into place.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the trim ribs.**
- **Do not push too hard on the A-pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the A-pillar trim to verify that all clips are securely fastened.**

Fig. 299: Inserting Bottom Portion Of A-Pillar Trim Into Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Front Door Opening Seal As Needed - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Install the front door opening seal (A). Make sure the seal is installed securely into the hooks (B).

GETtheMANUALS.org

Fig. 300: Identifying Front Door Opening Seal Applying Areas On Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Center Cowl Cover
    1. Install the center cowl cover (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Fig. 301: Identifying Center Cowl Cover, Hooks And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Side Cowl Cover - Both Sides

GETtheMANUALS.org

NOTE: **Repeat on the opposite side.**

1. Install the side cowl cover (A). Make sure the hooks (B) snap into place securely.
2. Right side; Install the windshield washer tube.

Fig. 302: Identifying Side Cowl Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Cowl Top Cover - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Install the cowl top cover (A).
2. Install the hood rear seal (B).
3. Install the clip (C).

GETtheMANUALS.org

Fig. 303: Identifying Cowl Top Cover, Hood Rear Seal And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Front Fender Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Install the front fender trim (A), then install the clips (B, C). Make sure the clips (D) snap into place securely.

GETtheMANUALS.org

Fig. 304: Identifying Front Fender Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Both Windshield Wiper Arm Assemblies

NOTE: Set the wiper arms to the auto-stop position before installation.

1. Install the wiper arms (A), the nut (B), and the caps (C).

Fig. 305: Identifying Wiper Arms, Nut And Caps With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Water Leak Test

Check for water leaks. Run water over the roof and on the sealing area as shown, and note these items:

- Use a 12 mm (0.47 in) diameter hose (A).
- Adjust the rate of water flow as shown.
- Do not use a nozzle.
- Hold the hose about 300 mm (11.81 in) away from the door.

GETtheMANUALS.org

Fig. 306: Checking Roof And Sealing Areas For Water Leaks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Windshield Wiper Arm - Adjustment
    1. **Adjust the windshield wiper arms** See **WIPER ARM/NOZZLE ADJUSTMENT** or **WIPER ARM REMOVAL AND INSTALLATION** .

DRIVER'S POWER WINDOW MOTOR TEST

MOTOR TEST

1. **REMOVE THE POWER WINDOW MASTER SWITCH**.
2. Test the motor in each direction by connecting battery power and ground to the power window master switch 26P connector according to the table.

Terminal / Direction	14	19
UP	⊖	⊕
DOWN	⊕	⊖

Fig. 307: Driver's Power Window Motor Switch Condition Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Fig. 308: Identifying Power Window Master Switch 26P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the motor does not run or fails to run smoothly, go to step **4** .
4. **REMOVE THE DOOR PANEL** .
5. Disconnect the 6P connector from the driver's power window motor.
6. Check for continuity between the power window master switch 26P connector terminals and driver's power window motor 6P connector terminals as shown. There should be continuity.

Power window master switch 26P connector	Driver's power window motor 6P connector
14 (GRY)	1 (GRY)
19 (PNK)	2 (PNK)

Fig. 309: Checking Continuity Between Power Window Master Switch 26P Connector And Driver's Power Window Motor 6P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. If there is no continuity, repair an open or high resistance in the wire(s). If the wire harness is OK,

GETtheMANUALS.org

REPLACE THE DRIVER'S DOOR POWER WINDOW MOTOR.

Hall IC Unit (Pulser) Test

8. Do the power window master switch input test for terminals No. 9, No. 10, No. 11, and No. 12.

FRONT PASSENGER'S POWER WINDOW MOTOR TEST

MOTOR TEST

1. **Remove the front passenger's power window switch** See **REAR POWER WINDOW SWITCH REMOVAL AND INSTALLATION** or **FRONT PASSENGER'S POWER WINDOW SWITCH REMOVAL AND INSTALLATION**.
2. Test the motor in each direction by connecting battery power and ground to the front passenger's power window switch 10P connector according to the table.

Terminal / Direction	8	10
UP	⊕	⊖
DOWN	⊖	⊕

Fig. 310: Front Passenger's Power Window Motor Switch Condition Chart

3. If the motor does not run or fails to run smoothly, go to step **4** .
4. **REMOVE THE DOOR PANEL** .
5. Disconnect the 2P connector from the front passenger's power window motor.
6. Check for continuity between the front passenger's power window switch 10P connector terminals and front passenger's power window motor 2P connector terminals as shown. There should be continuity.

Front passenger's power window switch 10P connector	Front passenger's power window motor 2P connector
10 (PNK)	1 (PNK)
8 (BLU)	2 (BLU)

GETtheMANUALS.org

Fig. 312: Checking Continuity Between Front Passenger's Power Window Switch 10P And 2P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. If there is no continuity, repair an open or high resistance in the wire(s). If the wire harness is OK, **REPLACE THE FRONT PASSENGER'S POWER WINDOW MOTOR**.

POWER WINDOW MASTER SWITCH INPUT TEST

NOTE: **Before testing, make sure the No. B42 (20 A), No. B43 (20 A), No. B44 (20 A), and No. B45 (20 A) fuses in the under-dash fuse/relay box are OK.**

1. Turn the ignition switch to LOCK (0).
2. **DISCONNECT THE POWER WINDOW MASTER SWITCH 26P CONNECTOR**.

GETtheMANUALS.org

Fig. 313: Identifying Power Window Master Switch 26P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the connector and socket terminals to be sure they are all making good contact:
   - If the terminals are bent, loose, or corroded, repair them as necessary, and recheck the system.
   - If the terminals are OK, go to step 4.
4. With the connector still disconnected, do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK; go to step 5.

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
19 14	PNK GRY	Connect terminals No. 19 (or No. 14) and No. 15, and terminals No. 14 (or No. 19) and No. 13 with jumper wires	Check driver's power window motor operation: The driver's power window should close (or open).	• Faulty driver's power window motor • An open or high resistance in the wire
24 25	ORN BRN	Connect terminals No. 24 (or No. 25) and No. 26, and terminals No. 25 (or No. 24) and No. 16 with jumper wires	Check front passenger's power window motor operation: The front passenger's power window should close (or open).	• Faulty front passenger's power window motor • Faulty front passenger's power window switch • An open or high resistance in the wire
			Check left rear power	• Faulty left rear power window motor

GETtheMANUALS.org

23 22	BLK PUR	Connect terminals No. 23 (or No. 22) and No. 21, and terminals No. 22 (or No. 23) and No. 16 with jumper wires	window motor operation: The left rear power window should close (or open).	• Faulty left rear power window switch • An open or high resistance in the wire
18 17	LT BLU RED	Connect terminals No. 18 (or No. 17) and No. 20, and terminals No. 17 (or No. 18) and No. 16 with jumper wires	Check right rear power window motor operation: The right rear power window should close (or open).	• Faulty right rear power window motor • Faulty right rear power window switch • An open or high resistance in the wire

5. Reconnect the connector to the power window master switch, do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK; **REPLACE THE POWER WINDOW MASTER SWITCH**.

NOTE: **After replacing the power window master switch, DO THE RESETTING THE POWER WINDOW CONTROL UNIT.**

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
15	WHT	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. B42 (20 A) fuse in the under-dash fuse/relay box • An open or high resistance in the wire
26	GRN	Ignition switch ON (II)	Measure the voltage to ground: There should be battery voltage.	• Blown No. B44 (20 A) fuse in the under-dash fuse/relay box • Faulty power window relay • An open or high resistance in the wire

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL**

GETtheMANUALS.org

TIME AWD SYSTEM .

DTC Description	DTC	Freeze Frame
C1840-12 Differential Fluid Pressure Sensor Circuit High Voltage		

1. Determine possible failure area (electrical circuit problem, hydraulic circuit problem):
   - 1. Start the engine.
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of the oil pressure sensor for rear differential	More than 3.67	V		

Do the current condition(s) match the threshold?

YES : Go to step 3.

NO : Go to step 2.

2. Problem verification:
   - 1. Clear the DTC with the HDS.
   - 2. **DO THE OIL PRESSURE CONTROL TEST IN THE FUNCTIONAL TEST WITH THE HDS** .

Is the test result OK?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated. **FOLLOW THE INSTRUCTIONS INDICATED ON THE HDS ACCORDING TO THE TEST RESULT** .

3. Determine possible failure area (short to power in PS1 line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Rear differential fluid pressure sensor 3P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Rear differential fluid pressure sensor 3P connector: disconnected

GETtheMANUALS.org

Test circuit PS1, SG

Test point 1 Rear differential fluid pressure sensor 3P connector No. 1 (GRY)

Test point 2 Rear differential fluid pressure sensor 3P connector No. 2 (PNK)

Fig. 2: Measuring Voltage Between Rear Differential Fluid Pressure Sensor 3P Connector No. 1 (GRY) And No. 2 (PNK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 3.67 V or more?

YES : Go to step 4.

NO : Go to step 5.

4. Shorted wire check (PS1 line to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Rear differential fluid pressure sensor 3P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit PS1

     Test point 1 Rear differential fluid pressure sensor 3P connector No. 2 (PNK)

GETtheMANUALS.org

Test point 2 Body ground

Fig. 3: Measuring Voltage Between Rear Differential Fluid Pressure Sensor 3P Connector No. 2 (PNK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 0.5 V or more?

YES : Repair a short to power in the PS1 wire between the rear differential fluid pressure sensor and the real time AWD control unit.

NO : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

5. Determine possible failure area (open in PS1 line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Connect terminals A and B with a jumper wire.

     Terminal A Rear differential fluid pressure sensor 3P connector No. 2 (PNK)

     Terminal B Body ground

GETtheMANUALS.org

Fig. 4: Connecting Rear Differential Fluid Pressure Sensor 3P Connector No. 2 (PNK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 3. Turn the ignition switch to ON (II).
- 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of the oil pressure sensor for rear differential	Less than 0.1	V		

Do the current condition(s) match the threshold?

YES : Go to step 7.

NO : Go to step 6.

6. Open wire check (PS1 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the jumper wire.
   - 3. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Test circuit PS1

     Rear differential fluid pressure sensor 3P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

GETtheMANUALS.org

Test point 1 Rear differential fluid pressure sensor 3P connector No. 2 (PNK)

Test point 2 Real time AWD control unit 24P connector No. 21 (PNK)

Fig. 5: Checking Continuity Between Rear Differential Fluid Pressure Sensor 3P Connector No. 2 (PNK) And Real Time AWD Control Unit 24P Connector No. 21 (PNK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Repair an open in the PS1 wire between the rear differential fluid pressure sensor and the real time AWD control unit.

7. Rear differential fluid pressure sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the jumper wire.
   - 3. Connect terminals A and B with a jumper wire.

   Terminal A Rear differential fluid pressure sensor 3P connector No. 1 (GRY)

GETtheMANUALS.org

Terminal B Rear differential fluid pressure sensor 3P connector No. 2 (PNK)

Fig. 6: Connecting Rear Differential Fluid Pressure Sensor 3P Connector No. 1 (GRY) And No. 2 (PNK) Using Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Turn the ignition switch to ON (II).
- 5. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of the oil pressure sensor for rear differential	Less than 0.1	V		

Do the current condition(s) match the threshold?

YES : **REPLACE THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR** .

NO : The rear differential fluid pressure sensor is OK. Go to step 8.

8. Open wire check (SG line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the jumper wire.
   - 3. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rear differential fluid pressure sensor 3P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

GETtheMANUALS.org

Test circuit SG

Test point 1 Rear differential fluid pressure sensor 3P connector No. 1 (GRY)

Test point 2 Real time AWD control unit 24P connector No. 11 (GRN)

Fig. 7: Checking Continuity Between Rear Differential Fluid Pressure Sensor 3P Connector No. 1 (GRY) And Real Time AWD Control Unit 24P Connector No. 11 (GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Repair an open in the SG wire between the rear differential fluid pressure sensor and the real time AWD control unit.

DTC C1840-14: DIFFERENTIAL FLUID PRESSURE SENSOR CIRCUIT LOW VOLTAGE

GETtheMANUALS.org

Fig. 8: DTC Troubleshooting Flow Chart (C1840-14)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
C1840-14 Differential Fluid Pressure Sensor Circuit Low Voltage		

1. Problem verification:

GETtheMANUALS.org

- 1. Start the engine.
- 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of the oil pressure sensor for rear differential	Less than 0.34	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Determine possible failure area (PS1 line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Rear differential fluid pressure sensor 3P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of the oil pressure sensor for rear differential	About 5 V			

Do the current condition(s) match the threshold?

YES : Go to step 4.

NO : Go to step 3.

3. Shorted wire check (PS1 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rear differential fluid pressure sensor 3P connector: disconnected

GETtheMANUALS.org

Real time AWD control unit 24P connector: disconnected

Test circuit PS1

Test point 1 Rear differential fluid pressure sensor 3P connector No. 2 (PNK)

Test point 2 Body ground

Fig. 9: Checking Continuity Between Rear Differential Fluid Pressure Sensor 3P Connector No. 2 (PNK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the PS1 wire between the rear differential fluid pressure sensor and the real time AWD control unit.

NO : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

4. Determine possible failure area (Rear differential fluid pressure sensor, SVCC line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Rear differential fluid pressure sensor 3P connector: disconnected

     Test circuit SVCC, SG

GETtheMANUALS.org

Test point 1 Rear differential fluid pressure sensor 3P connector No. 1 (GRY)

Test point 2 Rear differential fluid pressure sensor 3P connector No. 3 (TAN)

Fig. 10: Measuring Voltage Between Rear Differential Fluid Pressure Sensor 3P Connector No. 1 (GRY) And No. 3 (TAN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V?

YES : **REPLACE THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR** .

NO : Go to step 5.

5. Open wire check (SVCC line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rear differential fluid pressure sensor 3P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit SVCC

     Test point 1 Rear differential fluid pressure sensor 3P connector No. 3 (TAN)

     Test point 2 Real time AWD control unit 24P connector No. 20 (WHT)

GETtheMANUALS.org

Fig. 11: Checking Continuity Between Rear Differential Fluid Pressure Sensor 3P Connector No. 3 (TAN) And Real Time AWD Control Unit 24P Connector No. 20 (WHT)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Repair an open in the SVCC wire between the rear differential fluid pressure sensor and the real time AWD control unit.

DTC C1841-11: DIFFERENTIAL FLUID TEMPERATURE SENSOR CIRCUIT LOW VOLTAGE

GETtheMANUALS.org

Fig. 12: DTC Troubleshooting Flow Chart (C1841-11)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
C1841-11 Differential Fluid Temperature Sensor Circuit Low Voltage		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of the oil temperature sensor for rear differential	Less than 0.08	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Rear differential fluid temperature sensor check:

GETtheMANUALS.org

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the following connector.

  Rear differential fluid temperature sensor 2P connector

- 3. Turn the ignition switch to ON (II).
- 4. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of the oil temperature sensor for rear differential	About 5	V		

Do the current condition(s) match the threshold?

YES : **REPLACE THE REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR** .

NO : The rear differential fluid temperature sensor is OK. Go to step 3.

3. Shorted wire check (TOH line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rear differential fluid temperature sensor 2P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit TOH

     Test point 1 Rear differential fluid temperature sensor 2P connector No. 1 (YEL)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 13: Checking Continuity Between Rear Differential Fluid Temperature Sensor 2P Connector No. 1 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the TOH wire between the rear differential fluid temperature sensor and the real time AWD control unit.

NO : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

DTC C1841-13: DIFFERENTIAL FLUID TEMPERATURE SENSOR CIRCUIT HIGH VOLTAGE

GETtheMANUALS.org

GETtheMANUALS.org

Fig. 14: DTC Troubleshooting Flow Chart (C1841-11)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
C1841-13 Differential Fluid Temperature		
Sensor Circuit High Voltage		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of the oil temperature sensor for rear differential	More than 4.9	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Determine possible failure area (short to power in TOH line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Rear differential fluid temperature sensor 2P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Rear differential fluid temperature sensor 2P connector: disconnected

     Test circuit TOH

     Test point 1 Rear differential fluid temperature sensor 2P connector No. 1 (YEL)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 15: Measuring Voltage Between Rear Differential Fluid Temperature Sensor 2P Connector No. 1 (YEL) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 4.9 V or more?

YES : Go to step 7.

NO : Go to step 3.

3. Determine possible failure area (open in TOH line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Connect terminals A and B with a jumper wire.

     Terminal A Rear differential fluid temperature sensor 2P connector No. 1 (YEL)

     Terminal B Body ground

Fig. 16: Identifying Rear Differential Fluid Temperature Sensor 2P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 3. Turn the ignition switch to ON (II).
   - 4. Check the parameter(s) below with the HDS.

GETtheMANUALS.org

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of the oil temperature sensor for rear differential	Less than 0.1	V		

Do the current condition(s) match the threshold?

YES : Go to step 5.

NO : Go to step 4.

4. Open wire check (TOH line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the jumper wire.
   - 3. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rear differential fluid temperature sensor 2P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit TOH

     Test point 1 Real time AWD control unit 24P connector No. 18 (ORN)

If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

DTC C1841-27: DIFFERENTIAL FLUID TEMPERATURE SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM

GETtheMANUALS.org

Fig. 21: DTC Troubleshooting Flow Chart (C1841-27)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
C1841-27 Differential Fluid Temperature Sensor Circuit Range/Performance Problem		

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
C1841-11 Differential Fluid Temperature Sensor Circuit Low Voltage		
C1841-13 Differential Fluid Temperature Sensor Circuit High Voltage		

Is DTC C1841-11, C1841-13, or C1841-27 indicated?

DTC C1841-11 is indicated Go to **DTC C1841-11 TROUBLESHOOTING**.

DTC C1841-13 is indicated Go to **DTC C1841-13 TROUBLESHOOTING**.

GETtheMANUALS.org

DTC C1841-27 is indicated Go to step 2.

2. Problem verification:
   - 1. Clear the DTC with the HDS.
   - 2. Start the engine, and let it idle for 1 minute.
   - 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
C1841-27 Differential Fluid Temperature Sensor Circuit Range/Performance Problem		

Is DTC C1841-27 indicated?

YES : The failure is duplicated. Go to step 3.

NO : Intermittent failure, the system is OK at this time.

3. Rear differential fluid temperature sensor check:
   - Check the parameter(s) below with the HDS. Make note of this value as it will be needed in the following steps.

Signal	Current conditions	
	Values	Unit
Voltage of the oil temperature sensor for rear differential		

   - Turn the ignition switch to LOCK (0).
   - Turn the ignition switch to ON (II).
   - Check the parameter(s) below with the HDS then compare with the value checked in step 1.

Signal	Current conditions	
	Values	Unit
Voltage of the oil temperature sensor for rear differential		

Did the sensor value change?

YES : Check for an intermittent open or short in the TOH and TOL wires between the rear differential fluid temperature sensor and the real time AWD control unit, and recheck.

NO : **REPLACE THE REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR** .

DTC C1850-12: FAIL SAFE RELAY STUCK ON

GETtheMANUALS.org

Fig. 22: DTC Troubleshooting Flow Chart (C1850-12)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
C1850-12 Fail Safe Relay Stuck ON		

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of Battery	More than 8.3	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

GETtheMANUALS.org

NO : Intermittent failure, the system is OK at this time.

2. Real time AWD relay check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. **REMOVE THE REAL TIME AWD RELAY** , then **TEST IT** .

Is the real time AWD relay OK?

YES : The real time AWD relay is OK. Go to step 3.

NO : **REPLACE THE REAL TIME AWD RELAY** .

3. Shorted wire check (E-DPS COIL- line):
    - 1. Disconnect the following connector.

      Real time AWD control unit 24P connector

    - 2. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Real time AWD relay: disconnected

      Real time AWD control unit 24P connector: disconnected

      Test circuit E-DPS COIL-

      Test point 1 Real time AWD relay 4P socket No. 4 (PUR)

      Test point 2 Body ground

GETtheMANUALS.org

Fig. 23: Checking Continuity Between Real Time AWD Relay 4P Socket No. 4 (PUR) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the E-DPS COIL- wire between the real time AWD relay and the real time AWD control unit.

NO : The E-DPS COIL- wire is OK. Go to step 4.

4. Shorted wire check (E-DPS PWR line to power):
   - 1. Turn the ignition switch to ON (II).
   - 2. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Real time AWD relay: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit E-DPS PWR

     Test point 1 Real time AWD relay 4P socket No. 2 (WHT)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 24: Measuring Voltage Between Real Time AWD Relay 4P Socket No. 2 (WHT) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 0.1 V or less?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Repair a short to power in the E-DPS PWR wire between the real time AWD relay and the real time AWD control unit.

DTC C1850-14: FAIL SAFE RELAY STUCK OFF

GETtheMANUALS.org

Fig. 25: DTC Troubleshooting Flow Chart (C1850-14)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

GETtheMANUALS.org

DTC Description	DTC	Freeze Frame
C1850-14 Fail Safe Relay Stuck OFF		

1. Problem verification:
   - 1. Start the engine.
   - 2. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Voltage of Battery	Less than 3.0	V		

Do the current condition(s) match the threshold?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. A1-5 (30 A)

     Location Under-hood fuse/relay box

Is the fuse OK?

YES : The fuse is OK. Reinstall the fuses, then go to step 3.

NO : Replace the fuse, and recheck. If the fuse blows again, repair a short in the No. A1-5 (30 A) fuse circuit.

3. Real time AWD relay check:
   - 1. **REMOVE THE REAL TIME AWD RELAY** , then **TEST IT** .

Is the real time AWD relay OK?

YES : The real time AWD relay is OK. Go to step 4.

NO : **REPLACE THE REAL TIME AWD RELAY** .

4. Open wire check (+B E-DPS line):
   - 1. Measure the voltage between test points 1 and 2.

GETtheMANUALS.org

Test condition IG LOCK (0)

Real time AWD relay: disconnected

Test circuit +B E-DPS

Test point 1 Real time AWD relay 4P socket No. 1 (BLU)

Test point 2 Body ground

Fig. 26: Measuring Voltage Between Real Time AWD Relay 4P Socket No. 1 (BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B E-DPS wire is OK. Go to step 5.

NO : Repair an open in the +B E-DPS wire between the real time AWD relay and the No. A1-5 (30 A) fuse in the under-hood fuse/relay box.

5. Open wire check (IG1 P/W line):
   - 1. Turn the ignition switch to ON (II).
   - 2. Measure the voltage between test points 1 and 2.

   Test condition IG ON (II)

   Real time AWD relay: disconnected

   Test circuit IG1 P/W

GETtheMANUALS.org

Test point 1 Real time AWD relay 4P socket No. 3 (RED)

Test point 2 Body ground

Fig. 27: Measuring Voltage Between Real Time AWD Relay 4P Socket No. 3 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 P/W wire is OK. Go to step 6.

NO : Repair an open in the IG1 P/W wire between the real time AWD relay and the ignition switch.

6. Shorted wire check (E-DPS COIL- line to power):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Real time AWD relay: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit E-DPS COIL-

GETtheMANUALS.org

Test point 1 Real time AWD control unit 24P connector No. 6 (PUR)

Test point 2 Body ground

Fig. 28: Measuring Voltage Between Real Time AWD Control Unit 24P Connector No. 6 (PUR) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 0.1 V or less?

YES : The E-DPS COIL- wire is not shorted to power. Go to step 7.

NO : Repair a short to power in the E-DPS COIL- wire between the real time AWD relay and the real time AWD control unit, then **replace the real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

7. Open wire check (E-DPS COIL- line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Real time AWD relay: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit E-DPS COIL-

     Test point 1 Real time AWD relay 4P socket No. 4 (PUR)

     Test point 2 Real time AWD control unit 24P connector No. 6 (PUR)

GETtheMANUALS.org

Fig. 29: Checking Continuity Between Real Time AWD Relay 4P Socket No. 4 (PUR) And Real Time AWD Control Unit 24P Connector No. 6 (PUR)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The E-DPS COIL- wire is OK. Go to step 8.

NO : Repair an open in the E-DPS COIL- wire between the real time AWD relay and the real time AWD control unit.

8. Open wire check (E-DPS PWR line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Real time AWD relay: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit E-DPS PWR

     Test point 1 Real time AWD relay 4P socket No. 2 (WHT)

     Test point 2 Real time AWD control unit 24P connector No. 2 (WHT)

GETtheMANUALS.org

Fig. 30: Checking Continuity Between Real Time AWD Relay 4P Socket No. 2 (WHT) And Real Time AWD Control Unit 24P Connector No. 2 (WHT)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Repair an open in the E-DPS PWR wire between the real time AWD relay and the real time AWD control unit.

DTC C1851-18: MOTOR CIRCUIT LOW CURRENT

GETtheMANUALS.org

GETtheMANUALS.org

Fig. 31: DTC Troubleshooting Flow Chart (C1851-18)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**

DTC Description	DTC	Freeze Frame
C1851-18 Motor Circuit Low Current		

1. Problem verification (with idling):
   - 1. Turn the ignition switch to ON (II).
   - 2. Clear the DTC with the HDS.
   - 3. Start the engine.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
C1851-18 Motor Circuit Low Current		

Is DTC C1851-18 indicated?

YES : The failure is duplicated. Go to step 3.

NO : Go to step 2.

2. Problem verification (motor running):
   - 1. Clear the DTC with the HDS.
   - 2. With the engine running, **DO THE AIR BLEEDING IN THE ADJUSTMENT MENU WITH THE HDS** .
   - 3. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
C1851-18 Motor Circuit Low Current		

Is DTC C1851-18 indicated?

YES : The failure is duplicated. Go to step 3.

NO : Intermittent failure, the system is OK at this time.

3. Open wire check (GND line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

GETtheMANUALS.org

Real time AWD control unit 24P connector

- 3. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Real time AWD control unit 24P connector: disconnected

  Test circuit GND

  Test point 1 Real time AWD control unit 24P connector No. 4 (BLK)

  Test point 2 Body ground

Fig. 32: Checking Continuity Between Real Time AWD Control Unit 24P Connector No. 4 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. Go to step 4.

NO : Check for poor connections or loose terminals between the real time AWD control unit and ground (G603). If the connections are OK, repair an open in the GND wire between the real time AWD control unit and ground (G603).

4. Determine possible failure area (short in MH, ML lines, open in MH, ML lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Real time AWD control unit 24P connector: disconnected

     Test circuit MH

GETtheMANUALS.org

Test point 1 Real time AWD control unit 24P connector No. 1 (RED)

Test point 2 Body ground

Fig. 33: Checking Continuity Between Real Time AWD Control Unit 24P Connector No. 1 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Go to step 7.

NO : Go to step 5.

5. Determine possible failure area (MH, ML lines, real time AWD control unit):
   - 1. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0), At normal air temperature

     Real time AWD control unit 24P connector: disconnected

     Test circuit MH, ML

     Test point 1 Real time AWD control unit 24P connector No. 1 (RED)

     Test point 2 Real time AWD control unit 24P connector No. 3 (BLK)

GETtheMANUALS.org

Fig. 34: Measuring Resistance Between Real Time AWD Control Unit 24P Connector No. 1 (RED) And No. 3 (BLK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 10 ohms or less?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Go to step 6.

6. Rear differential pump motor internal open check:
   - 1. Disconnect the following connector.

     Rear differential pump motor 2P connector

   - 2. Measure the resistance between test points 1 and 2.

     Test condition IG LOCK (0)

     Real time AWD control unit 24P connector: disconnected

     Rear differential pump motor 2P connector: disconnected

     Test circuit MH, ML

     Test point 1 Rear differential pump motor 2P connector No. 1

GETtheMANUALS.org

Test point 2 Rear differential pump motor 2P connector No. 2

Fig. 35: Measuring Resistance Between Rear Differential Pump Motor 2P Connector No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 10 ohms or less?

YES : Repair an open in the MH and/or ML wires between the rear differential pump motor and the real time AWD control unit.

NO : **REPLACE THE REAR DIFFERENTIAL PUMP MOTOR** .

7. Rear differential pump motor internal shorted check:
   - 1. Disconnect the following connector.

     Rear differential pump motor 2P connector

   - 2. Check for continuity between the following test points and the rear differential pump motor body individually.

     Test condition IG LOCK (0)

     Real time AWD control unit 24P connector: disconnected

     Rear differential pump motor 2P connector: disconnected

Connector	Test circuit	Terminal
Rear differential pump motor 2P	ML	No. 1
	MH	No. 2

GETtheMANUALS.org

Fig. 36: Checking Continuity Between Test Points And Rear Differential Pump Motor Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Are there continuity?

YES : **REPLACE THE REAR DIFFERENTIAL PUMP MOTOR** .

NO : Repair a short in the MH and/or ML wires between the rear differential pump motor and the real time AWD control unit.

DTC C1851-19: CONTROL MODULE INTERNAL CONTROL MODULE MALFUNCTION

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 0.1 V or less?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Repair a short to power in the DTYH1 wire between the rear differential solenoid valve and the real time AWD control unit.

8. Rear differential solenoid valve check:

GETtheMANUALS.org

- 1. Measure the resistance between test points 1 and 2.

  Test condition IG ON (II)

  Rear differential solenoid valve 1P connector: disconnected

  Test circuit DTYH1

  Test point 1 Rear differential solenoid valve 1P connector No. 1

  Test point 2 Rear differential solenoid valve body

Fig. 47: Measuring Resistance Between Rear Differential Solenoid Valve 1P Connector No. 1 And Rear Differential Solenoid Valve Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 100 ohms or less?

YES : The rear differential solenoid valve is OK. Go to step 9.

NO : Replace the rear differential solenoid valve **Rear Differential Solenoid Valve Test**

9. Shorted wire check (DUTY1 line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 3. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rear differential solenoid valve 1P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

GETtheMANUALS.org

Test circuit DUTY1

Test point 1 Real time AWD control unit 24P connector No. 15 (RED)

Test point 2 Body ground

Fig. 48: Checking Continuity Between Real Time AWD Control Unit 24P Connector No. 15 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short in the DUTY1 wire between the rear differential solenoid valve and the real time AWD control unit.

NO : The DUTY1 wire is not shorted. Go to step 10.

10. Open wire check (DUTY1/DTYH1 line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      Rear differential solenoid valve 1P connector: disconnected

      Real time AWD control unit 24P connector: disconnected

      Test circuit DUTY1/DTYH1

      Test point 1 Rear differential solenoid valve 1P connector No. 1 (BLU)

      Test point 2 Real time AWD control unit 24P connector No. 15 (RED)

GETtheMANUALS.org

Fig. 49: Checking Continuity Between Rear Differential Solenoid Valve 1P Connector No. 1 (BLU) And Real Time AWD Control Unit 24P Connector No. 15 (RED)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** , and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE** .

NO : Repair an open in the DUTY1/DTYH1 wire between the rear differential solenoid valve and the real time AWD control unit.

DTC C1852-19: SOLENOID VALVE CIRCUIT HIGH CURRENT

GETtheMANUALS.org

TIME AWD SYSTEM .

DTC Description	DTC	Freeze Frame
C1858-72 Differential Fluid Pressure Deviation Low		

1. Rear differential fluid level check:
   - 1. **CHECK THE REAR DIFFERENTIAL FLUID LEVEL** , and check for rear differential fluid leakage.

   Is the check result OK?

   YES : Go to step 2.

   NO : Find and repair the source of the fluid leak then **ADD RECOMMENDED FLUID** .

2. Problem verification (function test with HDS):
   - 1. Turn the ignition switch to ON (II).
   - 2. **DO THE OIL PRESSURE CONTROL TEST IN THE FUNCTIONAL TEST MENU WITH THE HDS** .

   Is the test result OK?

   Fault code is not indicated Intermittent failure, the system is OK at this time.

   Fault code 2-1 or 5-1 is indicated Go to step 3.

   Fault code 3-1 is indicated Go to step 4.

   Fault code except 2-1, 3-1, and 5-1 is indicated Go to step 5.

3. Hydraulic system check 1:
   - 1. **DO THE AIR BLEEDING IN THE ADJUSTMENT MENU WITH THE HDS** .
   - 2. **DO THE OIL PRESSURE CONTROL TEST IN THE FUNCTIONAL TEST MENU WITH THE HDS** .

   Is the test result OK?

   YES : System is OK at this time.

   NO : **REPLACE THE REAR DIFFERENTIAL FLUID** then **DO THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR TEST** and **DO THE REAR DIFFERENTIAL SOLENOID VALVE TEST** . If they are OK, replace the rear differential assembly.

4. Hydraulic system check 2:
   - 1. **DO THE AIR BLEEDING IN THE ADJUSTMENT MENU WITH THE HDS** .

GETtheMANUALS.org

- 2. **DO THE OIL PRESSURE CONTROL TEST IN THE FUNCTIONAL TEST MENU WITH THE HDS** .

Is the test result OK?

YES : System is OK at this time.

NO : **REPLACE THE REAR DIFFERENTIAL FLUID** , then **DO THE REAR DIFFERENTIAL SOLENOID VALVE TEST** . If it is OK, replace the rear differential assembly.

5. DTC check:
   - 1. **DO THE OIL PRESSURE CONTROL TEST IN THE FUNCTIONAL TEST MENU WITH THE HDS** three times.
   - 2. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

Are there any DTCs?

YES : Go to the indicated DTC's troubleshooting.

NO : System is OK at this time.

DTC C1860-98: DIFFERENTIAL FLUID OVERHEATED

GETtheMANUALS.org

Fig. 55: DTC Troubleshooting Flow Chart (C1860-98)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**
- **When the clutch is presumed to be overheated, DTC C1860-98 is set and the system turns off the clutch engagement to protect the clutch. This DTC may also set under the following conditions.**
  - **When spinning the rear wheels while the vehicle is stuck in sand, mud, snow, etc**
  - **When the VSA system is OFF**

DTC Description	DTC	Freeze Frame

GETtheMANUALS.org

C1860-98 Differential Fluid Overheated		

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame
C1860-98 Differential Fluid Overheated		
C1861-9A Vehicle Spin Detected		
Other DTC		

Is DTC C1860-98, C1861-9A, or other DTC indicated?

DTC C1860-98 is indicated Go to step 2.

DTC C1861-9A is indicated Go to step 2.

Other DTC is indicated Go to the indicated DTC's troubleshooting.

2. Tire size check:
   - 1. Check the tire size of the four wheels.

Is the tire size same?

YES : Go to step 3.

NO : Replace the tire with the standard size.

3. Rear brake drag check:
   - 1. **Check for rear brake drag** .

Are the rear brakes OK?

YES : Go to step 4.

NO : **Inspect and repair the rear brakes** .

4. Brake system indicator check:
   - 1. Press the parking brake pedal.

Does the brake system indicator come on?

YES : Go to step 5.

NO : **INSPECT AND REPAIR THE BRAKE SYSTEM** .

GETtheMANUALS.org

5. Rear differential fluid temperature sensor check:
   - Check the parameter(s) below with the HDS.

Signal	Current conditions	
	Values	Unit
Oil temperature for rear differential		

   - Check the temperature of the rear differential fluid then compare it with the value checked in step 1.

Is the difference small?

YES : Go to step 6.

NO : **REPLACE THE REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR** .

6. Rear differential fluid pressure sensor test:
   - 1. **DO THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR TEST** .

Is the test result OK?

YES : System is OK at this time.

NO : **DO THE REPAIR DEPENDING ON THE TEST RESULT** .

DTC C1861-9A: VEHICLE SPIN DETECTED

GETtheMANUALS.org

Fig. 56: DTC Troubleshooting Flow Chart (C1861-9A)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM .**
- **When a vehicle spin is detected, DTC C1861-9A is set for the purpose of protecting the real time AWD system. When this condition occurs, the system will temporarily stop the real time AWD function. This DTC may also set under these conditions.**
  - **When spinning the rear wheels while stuck in sand, mud, snow, etc**
  - **When the VSA system is OFF**

DTC Description	DTC	Freeze Frame
C1861-9A Vehicle Spin Detected		

1. DTC check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check for DTCs with the HDS.

   - 3. Start the engine.
   - 4. Check for DTCs with the HDS.

DTC Description	DTC	Freeze Frame

GETtheMANUALS.org

C1873-00 Steering Angle Sensor Malfunction		

Is DTC C1873-00 indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. VSA system DTC check:
   - 1. Check for DTCs in the VSA system with the HDS.

DTC Description	Confirmed DTC	Freeze Frame

Are any DTCs stored?

YES : **GO TO THE INDICATED DTC'S TROUBLESHOOTING IN THE VSA SYSTEM** .

NO : Intermittent failure, the system is OK at this time.

GETtheMANUALS.org

HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEMS

AWD SYSTEM INDICATOR

The AWD system indicator will come on under certain conditions even if the real time AWD system is working normally. Here are some examples:

- When you use high-powered wireless equipment such as a CB or Ham radio in the vehicle.
- When you keep spinning the rear wheels while the vehicle is stuck in sand, mud, snow, etc.
- When the battery voltage suddenly drops below 8 volts.

After the AWD system indicator comes on, it stays on until you turn the ignition switch to LOCK (0).

DIAGNOSTIC TROUBLE CODE (DTC)

- The real time AWD control unit can memorize up to eight different DTCs. The system displays the DTCs by blinking the AWD system indicator. Multiple DTCs are displayed in the order they occurred, beginning with the most recent.
- If the same DTC is detected more than once, the most recent DTC is written over the earlier one. Therefore, when the same problem is detected more than once, it is memorized as a single DTC.
- The DTCs are memorized in the real time AWD control units EEPROM (non-volatile memory). Therefore, the memorized DTCs are not cleared when the battery is disconnected or when the real time AWD control unit is disconnected.
- If there is a problem in the central processing unit (CPU) of the real time AWD control unit, the AWD system indicator comes on, but no DTC is memorized. Refer to the symptom troubleshooting.

SELF-DIAGNOSIS

When a problem is detected during self-diagnosis, the system does the following:

- Turns the AWD system indicator on.
- Memorizes the DTC if possible.
- Stops AWD control and puts the vehicle back into two-wheel drive (front wheel only).

HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)

1. With the ignition switch in LOCK (0) connect the Honda Diagnostic System (HDS) to the DLC (A) located under the driver's side of the dashboard.

GETtheMANUALS.org

Fig. 1: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle and the real time AWD control unit. If it does not, go to the symptom troubleshooting for **HDS does not communicate**.
4. Check the diagnostic trouble code (DTC) and the freeze data, for all systems in the vehicle, troubleshoot the powertrain DTCs first and note them. Then refer to the indicated DTC's troubleshooting, and do the appropriate troubleshooting procedure.

NOTE:

- **The HDS can read the DTC, the freeze data, the current data, and other system data.**
- **For specific operations, refer to the Help menu that came with the HDS.**
- **It is best do an ALL DTC CHECK to look for other systems DTCs that are related to the problem.**

HOW TO CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS)

When the real time AWD control unit senses an abnormality in the input or output systems, the AWD system indicator in the gauge control module will usually come on, and the malfunction indicator lamp (MIL), the D indicator, the VSA indicator, and/or the ABS indicator may also come on.

NOTE: **Check the vehicle battery condition and charging system before troubleshooting.**

1. With the ignition switch in LOCK (0) connect the HDS to the DLC (A) located under the driver's side of the dashboard.

GETtheMANUALS.org

Fig. 2: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II). Make sure the HDS communicates with the vehicle and the real time AWD control unit. If it does not, go to the symptom troubleshooting for **HDS does not communicate**. Follow the prompts on the HDS to display the DTC(s) on the screen. Check the DTC and the freeze data for all systems. After determining the DTC(s), refer to the DTC Troubleshooting.

NOTE: See the HDS help menu for specific instructions.

3. If there are PGM-FI system DTCs and other system DTCs at the same time, troubleshoot the PGM-FI system DTCs first, otherwise the real time AWD DTC may return.
4. After recording the DTCs, clear all DTCs.
5. Test-drive the vehicle for several minutes in AWD mode, and check for DTCs. If the DTC returns, refer to the DTC Troubleshooting. If the DTC does not return, there was an intermittent problem within the circuit. Make sure all connectors and terminals in the circuit are tight.

HOW TO CLEAR DTCS

1. With the ignition switch in LOCK (0) connect the HDS to the DLC (A) located under the driver's side of the dashboard.

GETtheMANUALS.org

Fig. 3: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II).

   Make sure the HDS communicates with the vehicle and the real time AWD control unit. If it does not,

3. go to the symptom troubleshooting for **HDS does not communicate**.
4. Clear the DTC(s) by following the screen prompts on the HDS in the Real Time AWD Data List.
5. Turn the ignition switch to LOCK (0).

NOTE: **If the DTC that was cleared is related to another system, that system's DTC must be repaired, or the real time AWD DTC will return.**

HOW TO TROUBLESHOOT CIRCUITS AT THE REAL TIME AWD CONTROL UNIT

Special Tools Required

Backprobe Set 07SAZ-001000A

1. Remove the left rear side trim panel.
2. Inspect the circuit on the real time AWD control unit according to the DTC Troubleshooting using the backprobe set and a digital multimeter or an analog circuit tester.
3. Connect the backprobe adapters (A) to the stacking patch cords (B), and connect the cords to a digital multimeter or an analog circuit tester (C). Using the wire insulator as a guide for the contoured-tip of the backprobe adapter, gently slide the tip into the connector from the wire side until it comes in contact with the terminal end of the wires.

GETtheMANUALS.org

Fig. 4: Connecting Backprobe Adapters To Stacking Patch Cords
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PRECAUTIONS FOR REAL-TIME AWD (ALL-WHEEL DRIVE)

Under normal conditions, the AWD vehicle is in 2WD (front-wheel drive). However, the system will instantly transmit appropriate driving force to the rear wheels (depending on the driving force of the front wheels and the road conditions).

The Real-time AWD System does not have a manual switch to disable the AWD system. Whenever service work requires spinning the front or rear wheels with the engine, always lift and support the vehicle so all four wheels are off the ground.

REAL TIME AWD SYSTEM SYMPTOM TROUBLESHOOTING INDEX

Symptom	Probable Cause	Remedy
Rear differential overheats	• Fluid level too low • Incorrect fluid type	• Add recommended fluid • Drain and fill the differential with the recommended fluid
Rear differential leaks fluid	• Fluid level too high • Clogged breather hose • Worn or damaged oil seal • Damaged sealing washer • Loose mounting bolts or inadequate sealing	• Lower to proper level • Clean or replace • Replace the oil seal • Replace the sealing washer • Recheck torque or apply sealant
HDS does not communicate with vehicle		**TROUBLESHOOTING THE DLC CIRCUIT**

20	WHT	SVCC	Power supply for differential fluid pressure sensor	With ignition switch ON (II): about 5.0 V
21	PNK	PS	Detects differential fluid pressure sensor signal (positive)	With ignition switch ON (II): about 0.4 V to 4.1 V (Depending on rear differential fluid pressure)
22	LTBLU	TOL	Detects differential fluid temperature sensor (negative)	With ignition switch ON (II): about 0 V
23	Not used	Not used	---------	---------
24	RED	F_CAN-L	F-CAN communication circuit	With ignition switch ON (II): pulses

REAL TIME AWD CONTROL UNIT INITIALIZATION

PROCEDURE

NOTE:

- **Whenever the real time AWD control unit is replaced, it must be initialized.**
- **Park the vehicle on a flat and level surface.**

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

Fig. 6: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Real Time AWD Control Unit Initialization
    1. Select the ADJUSTMENT in the REAL TIME AWD SYSTEM with the HDS.
    2. Select the ECU REPLACEMENT in the ADJUSTMENT with the HDS.

NOTE: See the HDS Help menu for specific instructions.

REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION

REMOVAL

1. Tonneau Cover (For Some Models)
    1. Remove the tonneau cover (A).

Fig. 7: Removing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. Cargo Floor Cover
    1. Remove the cargo floor cover (A).

Fig. 8: Removing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Left Rear Door Sill Trim
    1. Fold down the left rear seat, then lift-up and latch the left rear seat back in the up right position.
    2. Detach the hooks (A) and the tab (B) from the left B-pillar lower trim (C) and the left rear side trim panel (D), and pull up the rear door inner sill trim (E) by hand to detach the clips (F, G), then remove the trim.

Fig. 9: Removing Left Rear Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

4. Rear Door Opening Seal As Needed
    1. Pull out the rear door opening seal (A) from the trim hooks (B) around the rear door opening flange as needed.

Fig. 10: Identifying Rear Door Opening Seal And Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Left Rear Damper Maintenance Cover
    1. Fold down the left rear seat back.
    2. Pull up the rear damper maintenance cover (A) by hand to detach the hooks (B), then remove the rear damper maintenance cover.

Fig. 11: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Left Rear Carpet Trim
    1. Detach the clips (A), then detach the left rear seat-back cover (B).

GETtheMANUALS.org

2. Detach the hooks (C) from the left rear side trim panel (D), and pull up the left rear carpet trims (E) by hand to detach the clips, then remove the left rear carpet trim.

Fig. 12: Removing Left Rear Carpet Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Fig. 13: Identifying Left Rear Carpet Trims, Left Rear Side Trim Panel, Hooks

7. Tailgate Weatherstrip As Needed
    1. Detach the tailgate weatherstrip (A) as needed.

GETtheMANUALS.org

Fig. 14: Identifying Tailgate Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Trim Panel
    1. Remove the clips (A).
    2. Detach the hooks (B) and the tabs (C) from the rear side trim panels (D), and pull up the rear trim panel (E) by hand to detach the clips (F, G), then remove the rear trim panel.

Fig. 15: Removing Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Left Rear Side Trim Panel
    1. Remove the rear seat release lever cap (A), then remove the screws.

GETtheMANUALS.org

Fig. 16: Removing Rear Seat Release Lever Cap And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Push in on the center pin (A), then remove the trunk hook (B).

Fig. 17: Identifying Center Pin And Trunk Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolt, then remove the tie-down hook (A).

GETtheMANUALS.org

Fig. 18: Identifying Tie-Down Hook And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the clips (A, B).
5. Detach the hooks (C) and the tabs (D) from the quarter pillar trim (E), and pull out the left rear side trim panel (F) by hand to detach the clips (G, H).
6. Carefully move the left rear side trim panel aside.

GETtheMANUALS.org

Fig. 19: Identifying Left Rear Side Trim Panel Fasteners Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Real Time AWD Control Unit
    1. Disconnect the connector (A) by pushing the lock (B) and Pull down the lever (C); the connector disconnects itself.
    2. Loosen the real time AWD control unit mounting bolts (D), then remove the real time AWD control unit (E).

GETtheMANUALS.org

Fig. 20: Pulling Down Connector Lever
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Real Time AWD Control Unit
    1. Install the real time AWD control unit (A).
    2. Align the connecting surface of the connector (B).
    3. pulling up the lever (C) of the connector, then confirm the connector is fully seated.

Fig. 21: Identifying Real Time AWD Control Unit, Connector And Lever With Torque

9. Cargo Floor Cover
    1. Install the cargo floor cover (A).

Fig. 33: Installing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Tonneau Cover (For Some Models)
    1. Install the tonneau cover (A).

GETtheMANUALS.org

Fig. 34: Installing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 35: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Real Time AWD Control Unit Initialization
    1. Select the ADJUSTMENT in the REAL TIME AWD SYSTEM with the HDS.
    2. Select the ECU REPLACEMENT in the ADJUSTMENT with the HDS.

NOTE: See the HDS Help menu for specific instructions.

Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAL TIME AWD SYSTEM BLEEDING

PROCEDURE

NOTE: **Whenever the rear differential assembly is disassembly, its real time AWD system must be bled.**

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 64: Identifying Data Link Connector

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Real Time AWD System Bleeding
    1. Select the ADJUSTMENT in the REAL TIME AWD SYSTEM with the HDS.
    2. Select the AIR BLEEDING in the ADJUSTMENT with the HDS.

NOTE: See the HDS Help menu for specific instructions.

ABNORMAL NOISE

GETtheMANUALS.org

Fig. 65: Real Time AWD System Symptom Troubleshooting Chart (Abnormal Noise)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

NOTE:

- **Before you troubleshoot, <u>REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM</u>.**
- **If necessary, comparison the noise with a know-good vehicle of the same type, if the noise is remarkably abnormal, do the following troubleshooting.**

1. Problem verification 1 (abnormal noise check):
   - 1. Test-drive the vehicle and check for abnormal noise.

   Did abnormal noise reappear?

   YES : Go to step 2.

   NO : Check the following items.

   - Check the rear differential fluid level and the fluid condition.
   - Check for rear differential fluid leaks.
   - Check for interference with items such as the harness.
   - Rotate either rear wheel by hand, and check that the other wheel rotates.
   - **<u>DO THE OIL PRESSURE CONTROL TEST IN THE FUNCTIONAL TEST MENU WITH THE HDS</u>** .
   - **<u>DO THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR TEST</u>** .
2. Rear differential visual check:
   - 1. Check the following items.
     - Check the rear differential fluid level and the fluid condition.
     - Check for rear differential fluid leaks.
     - Check the interference such as the harness.

   Is the check result OK?

   YES : Go to step 3.

   NO : **<u>REPLACE THE REAR DIFFERENTIAL FLUID OR ADD RECOMMENDED FLUID</u>** .

3. Problem verification (rear differential companion flange rotate check):
   - 1. Release the parking brake.
   - 2. Shift the transmission to N.
   - 3. Raise the vehicle on a lift.
   - 4. Make a reference mark (A) across the propeller shaft and the rear companion flange.

GETtheMANUALS.org

Fig. 66: Identifying Propeller Shaft Reference Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Remove the propeller shaft mounting bolts from the rear differential companion flange.
- 6. Rotate the companion flange by hand.

Can the rear differential companion flange be rotated smoothly by hand?

YES : Go to step 4.

NO : Replace the **Rear Differential Housing Assembly Removal and Installation**

4. Rear differential operation check:
   - 1. Rotate either rear wheel by hand, and check that the other wheel rotates.

Does the other wheel rotate?

YES : Go to step 5.

NO : Replace the **Rear Differential Housing Assembly Removal and Installation**

5. Torque control differential (TCD) assembly check:
   - 1. Realign the reference mark (A) on the propeller shaft and the rear differential companion flange, then install new flange bolts (B).

GETtheMANUALS.org

Fig. 67: Identifying Propeller Shaft Reference Mark With Flange Bolt And Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 2. Remove the following fuse.

  Fuse No. A1-5 (30 A)

  Location Under-food fuse/relay box

- 3. Test-drive the vehicle on the lift.

Is the abnormal noise still present?

YES : Replace the **Rear Differential Housing Assembly Removal and Installation** .

NO : Go to step 6.

6. Rear differential solenoid valve check:
   - 1. Do the SOLENOID TEST LEVEL 7, and then do SOLENOID TEST LEVEL 1 with the HDS.

Did abnormal noise happen when testing LEVEL 7 to LEVEL 1?

YES : Replace the rear differential solenoid valve. Go to **Rear Differential Solenoid Valve**

NO : Go to step 7.

7. Rear differential pump motor check:
   - 1. Do the Air Bleeding in the Adjustment Menu with the HDS.
   - 2. Listen for any abnormal noise coming from the rear differential pump motor.

GETtheMANUALS.org

Did abnormal noise happen while doing Air Bleeding?

YES : **REPLACE THE REAR DIFFERENTIAL PUMP MOTOR** .

NO : Go to step 8.

8. Problem verification 2 (abnormal noise check):
   - 1. **REPLACE THE REAR DIFFERENTIAL FLUID** .
   - 2. Do the Air Bleeding in the Adjustment Menu with the HDS.
   - 3. Test-drive the vehicle on the lift.

YES : Replace the **Rear Differential Housing Assembly Removal and Installation**

NO : Intermittent failure, the system is OK at this time.

AWD SYSTEM INDICATOR DOES NOT COME ON

Fig. 68: Real Time AWD System Symptom Troubleshooting (AWD System Indicator Not Come On)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM.**

1. Problem verification:

GETtheMANUALS.org

- 1. Turn the ignition switch to ON (II).

Does the AWD system indicator come on?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated. Go to step 2.

2. Gauge control module operation check:
   - 1. **DO THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION** .

Does the AWD system indicator blink?

YES : Go to step 3.

NO : **Replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** .

3. Real time AWD control unit check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Remove the following fuse.

     Fuse No. B6 (7.5 A)

     Location Under-dash fuse/relay box

   - 3. Turn the ignition switch to ON (II).

Does the AWD system indicator come on?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE**, or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE**, and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE**.

NO : **Replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** .

AWD SYSTEM INDICATOR DOES NOT GO OFF, AND NO DTCS ARE

GETtheMANUALS.org

STORED

Fig. 69: Real Time AWD System Symptom Troubleshooting (AWD System Indicator Not Go Off)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

NOTE:

- **Before you troubleshoot, <u>REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM</u>.**
- **Do not jump the SCS line.**

1. Problem verification:
   - 1. Test the battery. Charge or replace the battery if necessary.
   - 2. Turn the ignition switch to ON (II).

   Does the AWD system indicator come on?

   YES : The failure is duplicated. Go to step 2.

   NO : Intermittent failure, the system is OK at this time.

2. HDS communication check:
   - 1. Check that the HDS communicates with the vehicle.

   Does the HDS communicate with the vehicle?

   YES : Go to step 3.

   NO : **<u>GO TO THE DLC CIRCUIT TROUBLESHOOTING</u>** .

3. Real time AWD system communication check:
   - 1. Check the Main Menu of the real time AWD system with the HDS.

   Does the HDS show the Main Menu of the real time AWD system?

   YES : Go to step 4.

   NO : Go to the real time AWD symptom troubleshooting for **<u>HDS does not communicate</u>**.

4. Real time AWD control unit status check 1:
   - 1. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Longitudinal G sensor learning	Complete			
Air purge for rear differential	Complete			
AWD operation check	Complete			

   Do the current condition(s) match the threshold?

   YES : Go to step 5.

GETtheMANUALS.org

NO : Go to step 7.

5. Gauge control module operation check:
   - 1. **DO THE GAUGE CONTROL MODULE SELF-DIAGNOSTIC FUNCTION** .

Does the AWD system indicator blink?

YES : Go to step 6.

NO : **Replace the gauge control module** See **GAUGE CONTROL MODULE REMOVAL AND INSTALLATION** or **Rewriting the ODO Data and Transferring the Maintenance Minder™ Data to a New Gauge Control Module** .

6. Gauge control module DTC check:
   - 1. Check for DTCs in the METER system with the HDS.

DTC Description	DTC	Freeze Frame

Is DTC indicated?

YES : Go to the indicated DTC's troubleshooting in the gauge control module.

NO : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE**, or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE**, and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE**.

7. Real time AWD control unit status check 2:
   - 1. Check the parameter(s) below with the HDS.

Signal	Threshold		Current conditions	
	Values	Unit	Values	Unit
Longitudinal G sensor learning	Incomplete			
Air purge for rear differential	Incomplete			
AWD operation check	Incomplete			

Do the current condition(s) match the threshold?

Longitudinal G sensor learning is incomplete

GETtheMANUALS.org

Do the G Sensor Learning in the Adjustment MENU with the HDS.

Air purge for rear differential is incomplete

Do the ECU Replacement in the Adjustment MENU with the HDS.

AWD operation check is incomplete

Do the ECU Replacement in the Adjustment MENU with the HDS.

HDS DOES NOT COMMUNICATE

GETtheMANUALS.org

GETtheMANUALS.org

Fig. 70: Real Time AWD System Symptom Troubleshooting (HDS Not Communicate)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM.**

1. HDS communication check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check that the HDS communicates with the vehicle.

   Does the HDS communicate with the vehicle?

   YES : Go to step 2.

   NO : **GO TO THE DLC CIRCUIT TROUBLESHOOTING** .

2. Real time AWD system communication check:
   - 1. Check the Main Menu of the real time AWD system with the HDS.

   Does the HDS show the Main Menu of the real time AWD system?

   YES : The real time AWD system communication is OK. Intermittent failure, the system is OK at this time.

   NO : Go to step 3.

3. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. B6 (7.5 A)

     Location Under-dash fuse/relay box

   Is the fuse OK?

   YES : The fuse is OK. Reinstall the fuse, then go to step 4.

   NO : Repair a short in the No. B6 (7.5 A) fuse circuit.

4. Rear differential pump motor operation check:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check the operation sound of the rear differential pump motor on the rear differential with a stethoscope or a flat-tip screwdriver (at the rear differential pump motor) when the engine is started.

GETtheMANUALS.org

NOTE: **The rear differential pump motor operates within several seconds after the engine is started.**

Rear differential pump motor operation sound heard?

YES : Repair an open in the F CAN-H and/or F can-L wires.

NO : Go to step 5.

5. Rear differential fluid pressure sensor check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Rear differential fluid pressure sensor 3P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Check the Main Menu of the real time AWD system with the HDS.

Does the HDS show the Main Menu of the real time AWD system?

YES : Go to step 6.

NO : **REPLACE THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR** .

6. Open wire check (IG1 P/W line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     Real time AWD control unit 24P connector

   - 3. Start the engine.
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     Rear differential fluid pressure sensor 3P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit IG1 P/W

     Test point 1 Real time AWD control unit 24P connector No. 12 (RED)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 71: Measuring Voltage Between Real Time AWD Control Unit 24P Connector No. 12 (Red) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The IG1 P/W wire is OK. Go to step 7.

NO : Repair an open in the IG1 P/W wire between the real time AWD control unit and the No. B6 (7.5 A) fuse in the under-dash fuse/relay box.

7. Open wire check (GND line):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rear differential fluid pressure sensor 3P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit GND

     Test point 1 Real time AWD control unit 24P connector No. 8 (BLK)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 72: Checking Continuity Between Real Time AWD Control Unit 24P Connector No. 8 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The GND wire is OK. Go to step 8.

NO : Repair an open in the GND wire between the real time AWD control unit and ground (G603).

8. Shorted wire check (SVCC line):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rear differential fluid pressure sensor 3P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit SVCC

     Test point 1 Real time AWD control unit 24P connector No. 20 (WHT)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 73: Checking Continuity Between Real Time AWD Control Unit 24P Connector No. 20 (WHT) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to ground in the SVCC wire between the real time AWD control unit and body ground.

NO : The SVCC wire is OK. Go to step 9.

9. Open wire check (F CAN-H, F CAN-L lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Rear differential fluid pressure sensor 3P connector: disconnected

     Real time AWD control unit 24P connector: disconnected

     Test circuit F CAN-H

     Test point 1 Real time AWD control unit 24P connector No. 14 (WHT)

     Test point 2 DLC (16P) No. 6 (WHT)

     Test circuit F CAN-L

     Test point 1 Real time AWD control unit 24P connector No. 24 (RED)

     Test point 2 DLC (16P) No. 14 (RED)

GETtheMANUALS.org

Fig. 74: Checking Continuity Between Real Time AWD Control Unit 24P Connector No. 14 (WHT) And DLC (16P) No. 6 (WHT)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : **Update the real time AWD control unit if it does not have the latest software** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE**, or **substitute a known-good real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE**, and recheck. If the symptom/indication goes away with the updated real time AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good real time AWD control unit, **replace the original real time AWD control unit** See **REAL TIME AWD CONTROL UNIT REMOVAL AND INSTALLATION** or **REAL TIME AWD CONTROL UNIT UPDATE**.

NO : Repair an open in the F CAN-H and/or F CAN-L wires between the real time AWD control unit and the DLC.

REAL TIME AWD SYSTEM IS STUCK IN 4WD MODE

GETtheMANUALS.org

Fig. 75: Real Time AWD System Symptom Troubleshooting (Real Time AWD System Stuck In 4WD Mode)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM.**

1. Problem verification (clutch test):
   - 1. **DO THE CLUTCH TEST** .

   Is the test result OK?

   YES : Go to step 2.

   NO : The failure is duplicated. **DO THE REPAIR DEPENDING ON THE TEST RESULT** .

2. Oil Pressure Control Test:
   - 1. Turn the ignition switch to ON (II).
   - 2. **DO THE OIL PRESSURE CONTROL TEST IN THE FUNCTIONAL TEST MENU WITH THE HDS** .

   Is the test result OK?

   YES : Check the following items.

   - Check the rear differential fluid level and the fluid condition.
   - Check for rear differential fluid leaks.
   - **DO THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR TEST** .

GETtheMANUALS.org

NO : The failure is duplicated. **FOLLOW THE INSTRUCTIONS INDICATED ON THE HDS ACCORDING TO THE TEST RESULT** .

WILL NOT GO INTO 4WD MODE, POOR TRACTION, POOR ACCELERATION (AT START), POOR CLIMBING ABILITY

Fig. 76: Real Time AWD System Symptom Troubleshooting (Poor Traction)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **Before you troubleshoot, REVIEW THE HOW TO TROUBLESHOOT THE REAL TIME AWD SYSTEM.**

1. Clutch test:
   - 1. **DO THE CLUTCH TEST** .

Is the test result OK?

YES : Check the following items.

- Check the rear differential fluid level and the fluid condition.
- Check for rear differential fluid leaks.
- **DO THE OIL PRESSURE CONTROL TEST IN THE FUNCTIONAL TEST MENU WITH THE HDS** .
- **DO THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR TEST** .

NO : The failure is duplicated. **DO THE REPAIR DEPENDING ON THE TEST RESULT** .

GETtheMANUALS.org

REAR DIFFERENTIAL BREATHER BOX AND HOSE REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Differential Breather Box And Hose
    1. Disconnect the breather hose (A) from the rear differential breather pipe (B).
    2. Remove the breather hoses from the clamps (C) on the sensor cover.

Fig. 1: Identifying Breather Hose, Rear Differential Breather Pipe And Clamp

3. Disconnect the breather hose (A) from the pump motor breather pipe (B) and clamp (C).

GETtheMANUALS.org

Fig. 2: Identifying Breather Hose, Pump Motor Breather Pipe And Clamp

4. Remove the breather hose (A) from the clamp (C) on the right rear differential mount bracket B.

Fig. 3: Identifying Breather Hose And Clamp

5. Disconnect the breather hoses (A) from the breather box (B).
6. Remove the breather box from the body.

GETtheMANUALS.org

Fig. 4: Identifying Breather Hoses And Breather Box

INSTALLATION

1. Rear Differential Breather Box And Hose
    1. Install the breather box (A) to the body.
    2. Connect the breather hoses (B) to the breather box at the paint marks (C).

Fig. 5: Identifying Breather Box, Hoses And Paint Marks

3. Install the breather hoses (A) to the clamps (B) at the paint marks (C).
4. Connect the breather hose to the rear differential breather pipe (D) at the paint marks (E).

GETtheMANUALS.org

Fig. 6: Identifying Breather Hoses, Pipe, Clamps And Paint Marks

5. Connect the breather hose (A) to the pump motor breather pipe (B) and clamp (C) at the paint marks (D).

Fig. 7: Identifying Breather Hose, Pump Motor Breather Pipe, Clamp And Paint Marks

6. Install the breather hose (A) to the clamp (B) at the paint mark (C).

GETtheMANUALS.org

Fig. 8: Identifying Breather Hose, Clamp And Paint Mark

REAR DIFFERENTIAL CLUTCH TEST

TEST

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 9: Identifying Data Link Connector

2. Rear Differential Clutch Test

GETtheMANUALS.org

1. Block the front wheels (A), raise the left rear wheel, and support it with a safety stand (B) as shown.
2. Release the parking brake.

Fig. 10: Letting Rear Wheel

3. Hold the left rear tire, and turn it counterclockwise continuously for more than one rotation.
   - If the wheel rotates, go to step 4.
   - If the wheel does not rotate, replace the rear differential fluid, and retest. If the result is the same, replace the rear differential assembly.
4. Select the FUNCTIONAL TEST in the REAL TIME AWD SYSTEM with the HDS.
5. Select the SOLENOID TEST in the FUNCTIONAL TEST with the HDS.
6. Do LEVEL 7 of the SOLENOID TEST with the HDS.

Fig. 11: Turning Left Rear Tire Counterclockwise

7. Hold the left rear tire, and turn it counterclockwise continuously for more than one rotation.
   - If the wheel rotates, go to step 8.
   - If the wheel does not rotate, the system is OK at this time and the test is complete.
8. **CHECK THE CONDITION OF THE REAR DIFFERENTIAL FLUID**.

GETtheMANUALS.org

- If the fluid is dirty or burnt, replace the rear differential fluid.
- If the fluid is normal, go to step 9.

Fig. 12: Checking Condition Of Rear Differential Fluid

9. **MAKE SURE THE REAR DIFFERENTIAL FLUID IS AT THE PROPER LEVEL**.
   - If the level is below the proper level, check for rear differential fluid leaks at the differential assembly.
   - If the level is normal, go to step 10.
10. Check peripheral the rear differential for deformed or damaged.
   - If the deformed or damaged peripheral the rear differential, replace the defective part.
   - If the rear differential. is normal, go to step 11.
11. **DO THE REAR DIFFERENTIAL PRESSURE TEST WITH THE HDS**. If the Normal is displayed, go to step 12.
12. **DO THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR TEST**. If the rear differential fluid pressure sensor is OK, replace the rear differential fluid, and retest. If the result is the same, replace the rear differential assembly.

Fig. 38: Identifying Differential Clutch Assembly And Baffle Cover

16. Oil Pump Body Assembly
    1. Remove the 32.3 mm shim (A).
    2. Remove the 94.6 mm shim (B).

Fig. 39: Identifying Oil Pump Body Shim

3. Remove the oil pump body assembly (A).
4. Remove the dowel pins (B) and the O-ring (C).

GETtheMANUALS.org

Fig. 40: Identifying Oil Pump Body Assembly, Dowel Pins And O-Ring

17. Rear Differential Solenoid Valve
    1. Remove the rear differential solenoid valve (A), the O-ring (B), and the square washer (C) from the oil pump body assembly (D).

GETtheMANUALS.org

Fig. 41: Identifying Oil Pump Body Assembly, Rear Differential Solenoid Valve, O-Ring, Square Washer

REASSEMBLY

1. Rear Differential Solenoid Valve
    1. Apply Dual Pump Fluid II to a new O-ring (A).
    2. Install the rear differential solenoid valve (B) with the O-ring, and the square washer (C).

Fig. 42: Identifying Rear Differential Solenoid Valve, O-Ring And Square Washer

2. Oil Pump Body Assembly
    1. Apply Dual Pump Fluid II to a new O-ring (A).
    2. Install the dowel pins (B) with the O-ring.
    3. Install the oil pump body assembly (C).

GETtheMANUALS.org

Fig. 43: Identifying Oil Pump Body Assembly, Dowel Pins And O-Ring

4. Install the 32.3 mm shim (A).
5. Install the 94.6 mm shim (B).

GETtheMANUALS.org

Fig. 44: Identifying Oil Pump Body Assembly Shim

3. Rear Differential Clutch Assembly
    1. Install the differential clutch assembly (A).
    2. Install the baffle cover (B).

Fig. 45: Identifying Differential Clutch Assembly And Baffle Cover

4. Oil Pump Case
    1. Remove the dirt and oil from the sealing surfaces.
    2. Apply liquid gasket (P/N 08718-0004 or 08718-0009) evenly to the sealing surface.
    3. Install the component within 5 minutes of applying the liquid gasket. Make sure you seal the entire circumference of the bolt holes to prevent fluid leakage.

GETtheMANUALS.org

NOTE:

- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply the new liquid gasket.**
- **Allow it to cure at least 30 minutes after assembly before filling the differential with the recommended fluid.**

Fig. 46: Identifying Liquid Gasket Applying Area

4. Install the dowel pins (A).
5. Install the oil pump case (B).
6. Torque the eight mounting bolts in a crisscross pattern in several steps.

Fig. 47: Identifying Oil Pump Case, Dowel Pins With Torque Specifications

GETtheMANUALS.org

5. Oil Pump Cover
    1. Install the fluid strainer (A) and the dowel pins (B).
    2. Install the inner rotor (C) and the outer rotor (D) with the "." marks (E) facing the oil pump case side.
    3. Install the oil pump cover (F) with a new oil pump cover seal (G).
    4. Torque the six mounting bolts in a crisscross pattern in several steps.

Fig. 48: Identifying Oil Pump Cover, Seal, Inner And Outer Rotor, Fluid Strainer And Dowel Pins

6. Rear Differential Companion Flange
    1. Set the companion flange (A) to the clutch guide shaft.
    2. Drive on the companion flange using the 41.8 mm oil seal driver.

GETtheMANUALS.org

Fig. 49: Driving On Companion Flange Using Oil Seal Driver

3. Check the length of clutch guide shaft as shown.

NOTE: **Make sure to drive on the companion flange until 2 to 3 thread pitches of the clutch guide shaft appears.**

Fig. 50: Checking Length Of Clutch Guide Shaft Using Gauge

4. Apply Dual Pump Fluid II to the used locknut.
5. Set the used locknut to the clutch guide shaft.
6. Install the companion flange holder (A) and holder handle (B) on the companion flange.

GETtheMANUALS.org

Fig. 51: Removing Used Locknut And Companion Holder

7. Tighten the used locknut.
8. Remove the used locknut and the companion holder.
9. Check the companion flange has been set to the bottom.
10. Apply Dual Pump Fluid II to a new O-ring (A).
11. Install the O-ring, a new back-up ring (B), the spring washer (C), and a new locknut (D).

Fig. 52: Identifying O-Ring, Back-Up Ring, Spring Washer And Locknut

12. Install the companion flange holder (A) and holder handle (B) on the companion flange.
13. Tighten the locknut to the specified torque.

Specified Torque:

GETtheMANUALS.org

107.8 N.m (11.0 kgf.m, 80 lbf.ft)

Fig. 53: Tightening Locknut

14. Stake the locknut tab (A) into the groove in the clutch guide.

Fig. 54: Staking Locknut Tab Into Clutch Guide Groove

7. Rear Differential Subharness
    1. 13M canada-built models: Install the hose bracket (A) to the rear differential.

REAR DIFFERENTIAL FLUID INSPECTION

INSPECTION

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Differential Fluid - Inspection
    1. Use solvent and a brush to wash any oil and dirt off the oil filler plug, and dry them with compressed air.
    2. Remove the oil filler plug (A) and the sealing washer (B).
    3. Check the condition of the rear differential fluid, if the fluid is dirty or burnt, replace it.
    4. Make sure the rear differential fluid is at the proper level (C).
        - If the level is below the proper level, check for rear differential fluid leaks at the differential.
        - If a problem is found, fix it before filling the differential with fluid.

Fig. 70: Identifying Rear Differential Fluid Level

GETtheMANUALS.org

5. The fluid level must reach up to the bottom of the oil filler plug hole.
6. If necessary, add the rear differential fluid until it runs out, then reinstall the oil filler plug with a new sealing washer.

REAR DIFFERENTIAL FLUID PRESSURE SENSOR REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Remove the oil filler plug (A) and the sealing washer (B).

Fig. 71: Identifying Oil Filler Plug And Sealing Washer With Torque Specifications (Real Time AWD System)

2. Remove the drain plug (A) and the sealing washer (B), then drain the rear differential fluid.

GETtheMANUALS.org

Fig. 72: Identifying Drain Plug And Sealing Washer With Torque Specifications (Real Time AWD System)

3. Rear Differential Sensor Cover
    1. Remove the rear differential sensor cover (A).

Fig. 73: Identifying Rear Differential Sensor Cover

4. Rear Differential Fluid Pressure Sensor Connector
    1. Disconnect the connector (A).

GETtheMANUALS.org

5. Rear Differential Fluid Pressure Sensor
    1. Remove the rear differential fluid pressure sensor (A) and the O-ring (B).

Fig. 75: Identifying Rear Differential Fluid Pressure Sensor And O-Ring With Torque Specifications

INSTALLATION

1. Rear Differential Fluid Pressure Sensor
    1. Install the rear differential fluid pressure sensor (A) with a new O-ring (B).

GETtheMANUALS.org

Fig. 76: Identifying Rear Differential Fluid Pressure Sensor With O-Ring With Torque Specification

2. Rear Differential Fluid Pressure Sensor Connector
    1. Connect the connector (A).

Fig. 77: Identifying Rear Differential Fluid Pressure Sensor Connector

3. Rear Differential Sensor Cover
    1. Install the rear differential sensor cover (A).
    2. Connect the breather hoses (B) to the clamps (C).

GETtheMANUALS.org

Fig. 78: Identifying Rear Differential Sensor Cover, Breather Hoses And Clamps

4. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Clean the drain plug (A), then install it with a new sealing washer (B).
    2. Refill the differential with rear differential fluid to the proper level.

NOTE: **If you disassemble the differential, check the rear differential fluid level again after the 4WD system check is finished. Add fluid if necessary.**

Fluid Capacity:

1.2 L (1.3 US qt) at fluid change

1.5 L (1.6 US qt) at overhaul

Recommended fluid: Honda Dual Pump Fluid II

GETtheMANUALS.org

Fig. 79: Identifying Drain Plug Sealing Washer With Torque Specifications (Real Time AWD System)

3. Install the oil filler plug (A) with a new sealing washer (B).

Fig. 80: Identifying Oil Filler Plug With Sealing Washer With Torque Specifications (Real Time AWD System)

5. Rear Differential Fluid After Replacement - Check (Real Time AWD System)
    1. Apply the parking brake, and block all four wheels.
    2. Start the engine, and let it idle more than 6 seconds, then turn the engine off. Repeat this step three more times.
    3. Shift to D while pressing the brake pedal firmly. Press the accelerator pedal for 2 seconds, then let it idle. Repeat this three more times.
    4. Check that the real time AWD indicator does not come on. If it does, check for real time AWD

GETtheMANUALS.org

system DTC's.

6. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 81: Identifying Data Link Connector

7. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

4. Rear Differential Fluid Pressure Sensor
    1. Remove the rear differential fluid pressure sensor (A) and the O-ring (B).

GETtheMANUALS.org

Fig. 84: Identifying Rear Differential Fluid Pressure Sensor And O-Ring

TEST

NOTE: **Check that the real time AWD indicator does not come on. If it does, check for real time AWD system DTC's.**

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 85: Identifying Data Link Connector

GETtheMANUALS.org

2. Rear Differential Fluid Pressure Sensor - Test
    1. Turn the ignition switch to LOCK (0).
    2. Reconnect the rear differential fluid pressure sensor connector (A) to the rear differential pressure sensor (B).
    3. Turn the ignition switch to ON (II).
    4. Select the DATA LIST in the REAL TIME AWD SYSTEM with the HDS.
    5. Check the ACTUAL OIL PRESSURE OF THE OIL PRESSURE SENSOR FOR REAR DIFFERENTIAL in the DATA LIST with the HDS.

Fig. 86: Identifying Rear Differential Fluid Pressure Sensor Connector And Sensor

- If the fluid pressure is higher than 0-77 kPa (0.0-0.8 kgf/cm^2 , 0-11 psi), replace the rear differential fluid pressure sensor.
- If the fluid pressure is within the range of 0-77 kPa (0.0-0.8 kgf/cm^2 , 0-11 psi), go to step 6.

    6. Turn the ignition switch to LOCK (0).
    7. Attach the A/T pressure test hose, the A/T pressure adapter, the pressure gauge adapter, and the oil pressure hose as shown, then attach the rear differential fluid pressure sensor (A) to the pressure gauge adapter (B).
    8. Place the end of the A/T pressure test hose into a drain pan (C).
    9. Start the engine, the real time AWD pump will do a brief low pressure purge of the system, this will cause air and fluid to flow out of the test hose.
    10. Turn the ignition switch to LOCK (0).
    11. Repeat step 9 again to assure the A/T pressure test hose is full of fluid without air bubbles
    12. Turn the ignition switch to LOCK (0).

GETtheMANUALS.org

Fig. 87: Performing A/T Pressure Test Hose Using Adapter

13. Attach the A/T low pressure gauge w/panel (A) onto the end of the A/T pressure test hose (B).
14. Turn the ignition switch to ON (II).
15. Select the ADJUSTMENT in the REAL TIME AWD SYSTEM with the HDS.
16. Select the AIR BLEEDING in the ADJUSTMENT with the HDS.

NOTE: See the HDS Help menu for specific instructions.

17. Select the FUNCTIONAL TEST in the REAL TIME AWD SYSTEM with the HDS.

Fig. 88: Checking Differential Fluid Pressure Value

18. Select the SOLENOID TEST in the FUNCTIONAL TEST with the HDS.
19. Do LEVEL 7 of the SOLENOID TEST with the HDS.

GETtheMANUALS.org

20. Check the differential fluid pressure value of the pressure gauge.
    - If the fluid pressure is not within the range of 280-560 kPa (2.86-5.71 kgf/cm^2 , 40.6-81.2 psi), replace the rear differential pump motor.
    - If the fluid pressure is within the range of 280-560 kPa (2.86-5.71 kgf/cm^2 , 40.6-81.2 psi), go to step 21.
21. Check the ACTUAL OIL PRESSURE OF THE OIL PRESSURE SENSOR FOR REAR DIFFERENTIAL in the DATA LIST with the HDS.
    - If the fluid pressure is not within the range of 280-560 kPa (2.86-5.71 kgf/cm^2 , 40.6-81.2 psi), replace the rear differential fluid pressure sensor.
    - If the fluid pressure is within the range of 280-560 kPa (2.86-5.71 kgf/cm^2 , 40.6-81.2 psi), differential fluid pressure sensor is OK, and the test is complete.

INSTALLATION

1. Rear Differential Fluid Pressure Sensor
    1. Install the rear differential fluid pressure sensor (A) with a new O-ring (B).

Fig. 89: Identifying Rear Differential Fluid Pressure Sensor With O-Ring With Torque Specification

2. Rear Differential Fluid Pressure Sensor Connector
    1. Connect the connector (A).

GETtheMANUALS.org

Fig. 90: Identifying Rear Differential Fluid Pressure Sensor Connector

3. Rear Differential Sensor Cover
    1. Install the rear differential sensor cover (A).
    2. Connect the breather hoses (B) to the clamps (C).

Fig. 91: Identifying Rear Differential Sensor Cover, Breather Hoses And Clamps With Torque Specifications

4. Rear Differential Fluid - Inspection
    1. Use solvent and a brush to wash any oil and dirt off the oil filler plug, and dry them with compressed air.
    2. Remove the oil filler plug (A) and the sealing washer (B).
    3. Check the condition of the rear differential fluid, if the fluid is dirty or burnt, replace it.

GETtheMANUALS.org

4. Make sure the rear differential fluid is at the proper level (C).
    - If the level is below the proper level, check for rear differential fluid leaks at the differential.
    - If a problem is found, fix it before filling the differential with fluid.

Fig. 92: Identifying Rear Differential Fluid Level

5. The fluid level must reach up to the bottom of the oil filler plug hole.
6. If necessary, add the rear differential fluid until it runs out, then reinstall the oil filler plug with a new sealing washer.

5. Rear Differential Fluid After Replacement - Check (Real Time AWD System)
    1. Apply the parking brake, and block all four wheels.
    2. Start the engine, and let it idle more than 6 seconds, then turn the engine off. Repeat this step three more times.
    3. Shift to D while pressing the brake pedal firmly. Press the accelerator pedal for 2 seconds, then let it idle. Repeat this three more times.
    4. Check that the real time AWD indicator does not come on. If it does, check for real time AWD system DTC's.

REAR DIFFERENTIAL HOUSING ASSEMBLY REMOVAL AND INSTALLATION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number

GETtheMANUALS.org

	Driver Handle, 40 mm I.D. 07746-0030100

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Remove the oil filler plug (A) and the sealing washer (B).

Fig. 109: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

2. Remove the drain plug (A) and the sealing washer (B), then drain the rear differential fluid.

GETtheMANUALS.org

Fig. 110: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

3. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Make a reference mark (A) across the No. 2 propeller shaft (B) and the rear differential companion flange (C).
    2. Remove the No. 2 propeller shaft flange bolts (D).
    3. Separate the No. 2 propeller shaft from the rear differential.

NOTE: Suspend the propeller shaft with an appropriate size nylon strap.

Fig. 111: Identifying Rear Differential Companion Flange, Reference Mark, Shaft And Bolts

4. Rear Differential Connector
    1. Remove the connector cover (A).

GETtheMANUALS.org

2. Disconnect the connectors (B).

Fig. 112: Identifying Connector Cover And Connectors

3. Release the harness clips (A).

10. Rear Differential Housing Assembly
    1. Remove the mounting bolts (A) in a crisscross pattern in several steps.
    2. Remove the differential housing assembly (B) and the oil seals (C).

Fig. 122: Identifying Differential Housing Assembly, Oil Seals And Mounting Bolts

INSTALLATION

1. Rear Differential Housing Assembly
    1. Remove the dirt and oil from the sealing surfaces.

GETtheMANUALS.org

2. Apply liquid gasket (P/N 08718-0004 or 08718-0009) evenly to the sealing surface.
3. Install the component within 5 minutes of applying the liquid gasket. Make sure you seal the entire circumference of the bolt holes to prevent fluid leakage.

NOTE:

- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply the new liquid gasket.**
- **Allow it to cure at least 30 minutes after assembly before filling the differential with the recommended fluid.**

Fig. 123: Identifying Liquid Gasket Applying Area

4. Install the differential housing assembly (A).
5. Torque the mounting bolts (B) in a crisscross pattern in several steps.

GETtheMANUALS.org

Fig. 124: Identifying Differential Housing Assembly With Mounting Bolts

2. Rear Differential Right Side Oil Seal (Real Time AWD System)
    1. Install a new rear differential right side oil seal (A) even and flush with the machined edge of the differential carrier assembly using the 40 mm driver handle (B).

Fig. 125: Installing Rear Differential Right Side Oil Seal

GETtheMANUALS.org

3. Rear Differential Left Side Oil Seal (Real Time AWD System)
    1. Install a new rear differential right side oil seal (A) even and flush with the machined edge of the differential carrier assembly using the 40 mm driver handle (B).

Fig. 126: Installing Rear Differential Right Side Oil Seal

4. Rear Differential Assembly
    1. Install the rear differential mount assembly A to the rear differential assembly (B) with new bolts.

GETtheMANUALS.org

Fig. 136: Identifying Rear Differential Connector Harness Clips

2. Connect the connectors (A).
3. Install the connector cover (B).

Fig. 137: Identifying Connector Cover And Connectors

10. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Attach the No. 2 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference mark (C) you made during the removal procedure.

GETtheMANUALS.org

2. Install new flange bolts (D) to the specified torque.

Fig. 138: Identifying Rear Differential Companion Flange, Reference Mark, Shaft And Bolts

11. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Clean the drain plug (A), then install it with a new sealing washer (B).
    2. Refill the differential with rear differential fluid to the proper level.

NOTE: **If you disassemble the differential, check the rear differential fluid level again after the 4WD system check is finished. Add fluid if necessary.**

Fluid Capacity:

1.2 L (1.3 US qt) at fluid change

1.5 L (1.6 US qt) at overhaul

Recommended fluid: Honda Dual Pump Fluid II

GETtheMANUALS.org

Fig. 139: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

3. Install the oil filler plug (A) with a new sealing washer (B).

Fig. 140: Identifying Oil Filler Plug And Sealing Washer (Real Time AWD System)

12. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

Fig. 141: Identifying Data Link Connector

13. Real Time AWD System Bleeding
    1. Select the ADJUSTMENT in the REAL TIME AWD SYSTEM with the HDS.
    2. Select the AIR BLEEDING in the ADJUSTMENT with the HDS.

NOTE: See the HDS Help menu for specific instructions.

14. Test Drive
    1. Test-drive the vehicle.
15. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

REAR DIFFERENTIAL MOUNT REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Make a reference mark (A) across the No. 2 propeller shaft (B) and the rear differential companion flange (C).
    2. Remove the No. 2 propeller shaft flange bolts (D).
    3. Separate the No. 2 propeller shaft from the rear differential.

NOTE: Suspend the propeller shaft with an appropriate size nylon strap.

GETtheMANUALS.org

Fig. 142: Identifying Rear Differential Companion Flange, Reference Mark, Shaft And Bolts

3. Rear Differential Jack Support
    1. Place a transmission jack under the rear differential assembly.
4. Rear Differential Mount Bracket
    1. Remove the left and right rear differential mount brackets B.

Fig. 143: Identifying Left And Right Rear Differential Mount Brackets With Bolts

2. Remove the mounting bolts (A) and the plates (B).

GETtheMANUALS.org

Fig. 144: Identifying Mounting Bolts And Plates

5. Rear Differential Mount Rubber
    1. Remove the rear differential mount rubber (A).

Fig. 145: Identifying Rear Differential Mount Rubber

6. Rear Differential Mount Assembly A
    1. Slightly lower the rear differential on the transmission jack.

GETtheMANUALS.org

NOTE: **Make sure you do not over extend the wire harness and the breather hose.**

2. Remove the rear differential mount assembly A stopper (B).
3. Remove the rear differential mount assembly A.

Fig. 146: Identifying Rear Differential Mount Assembly And Stopper

INSTALLATION

1. Rear Differential Mount Assembly A
    1. Install the differential mount assembly A stopper (B).
    2. Install the rear differential mount assembly A.
    3. Raise the rear differential to the mounting level.

GETtheMANUALS.org

Fig. 147: Identifying Rear Differential Mount Assembly And Stopper With Torque Specifications

2. Rear Differential Mount Rubber
    1. Install the rear differential mount rubber (A).

Fig. 148: Identifying Rear Differential Mount Rubber

3. Rear Differential Mount Bracket
    1. Align the tabs (A) of the rubber mount (B) with the holes (C) of the plates (D).

GETtheMANUALS.org

2. Install the rear differential mounting bolts (E).

Fig. 149: Identifying Rear Differential Mounting Bolts, Tabs, Rubber Mount And Holes With Torque Specifications

3. Install the left and right rear differential mount brackets B.
4. Tighten new differential mount brackets B mounting bolts (A) to the specified torque.
5. Loosely install new differential mount brackets B mounting bolt (C).

GETtheMANUALS.org

Fig. 150: Identifying Rear Differential Mount Brackets And Mounting Bolts With Torque Specifications

4. Rear Differential Mount Bolt - Tighten
    1. Lower the transmission jack.
    2. Tighten differential mount brackets B mounting bolt to the specified torque.
5. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Attach the No. 2 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference mark (C) you made during the removal procedure.
    2. Install new flange bolts (D) to the specified torque.

2. Remove the mounting bolts (A) and the plates (B).

Fig. 161: Identifying Mounting Bolts And Plates

8. Rear Driveshaft Inboard Side Both - Disconnection

GETtheMANUALS.org

1. Lower the rear differential assembly (A) while pulling both rear driveshaft inboard joints (B) out of the rear differential assembly.

NOTE:

- **Be careful not to damage the driveshaft ring (C) when prying out the driveshaft inboard joints.**
- **Be careful not to damage the oil seals (D).**

Fig. 162: Pulling Both Rear Driveshaft Inboard Joints Out Of Rear Differential Assembly

2. Remove the set ring (A) from inboard joint.

Fig. 163: Identifying Inboard Joint Set Ring

9. Rear Differential Assembly
   1. Remove the rear differential mount assembly A from the rear differential assembly (B).

GETtheMANUALS.org

Fig. 164: Identifying Rear Differential Mount Assembly And Rear Differential Assembly

10. Rear Differential Left Side Oil Seal (Real Time AWD System)
    1. Remove the rear differential left side oil seal (A) from the differential housing.

Fig. 165: Installing Rear Differential Right Side Oil Seal

11. Rear Differential Right Side Oil Seal (Real Time AWD System)
    1. Remove the rear differential right side oil seal (A) from the differential housing.

GETtheMANUALS.org

Fig. 166: Removing Rear Differential Right Side Oil Seal

INSTALLATION

1. Rear Differential Right Side Oil Seal (Real Time AWD System)
    1. Install a new rear differential right side oil seal (A) even and flush with the machined edge of the differential carrier assembly using the 40 mm driver handle (B).

Fig. 167: Installing Rear Differential Right Side Oil Seal

GETtheMANUALS.org

2. Rear Differential Left Side Oil Seal (Real Time AWD System)
    1. Install a new rear differential right side oil seal (A) even and flush with the machined edge of the differential carrier assembly using the 40 mm driver handle (B).

Fig. 168: Installing Rear Differential Right Side Oil Seal

3. Rear Differential Assembly
    1. Install the rear differential mount assembly A to the rear differential assembly (B) with new bolts.

GETtheMANUALS.org

Fig. 169: Identifying Rear Differential Mount Assembly And Rear Differential Assembly With Torque Specifications

4. Rear Driveshaft Inboard Side Both - Reconnection
    1. Install new set ring (A) into the groove (B) of the rear driveshaft inboard joint on both side.

Fig. 170: Identifying Rear Driveshaft Inboard Side Ring And Groove

    2. Lift the rear differential assembly (A) up into position.
    3. Insert the inboard end (B) of the rear driveshafts (C) into the differential (D) until the set ring (E) locks in the groove (F).

NOTE: **Insert the driveshaft horizontally to prevent damaging the oil seals (G).**

GETtheMANUALS.org

Fig. 171: Lifting Rear Differential Assembly

Fig. 172: Installing Inboard End Of Rear Driveshafts Into Differential

5. Rear Differential Mount Bracket
    1. Align the tabs (A) of the rubber mount (B) with the holes (C) of the plates (D).
    2. Install the rear differential mounting bolts (E).

GETtheMANUALS.org

Fig. 173: Identifying Rear Differential Mounting Bolts, Tabs, Rubber Mount And Holes With Torque Specifications

3. Install the left and right rear differential mount brackets B.
4. Tighten new differential mount brackets B mounting bolts (A) to the specified torque.
5. Loosely install new differential mount brackets B mounting bolt (C).

GETtheMANUALS.org

Fig. 174: Identifying Rear Differential Mount Brackets And Mounting Bolts With Torque Specifications

6. Rear Differential Mount Bolt - Tighten
    1. Lower the transmission jack.
    2. Tighten differential mount brackets B mounting bolt to the specified torque.
7. Rear Differential Breather Hoses
    1. Connect the breather hoses (A) to the breather pipes (B) and clamps (C).

Differential upper side

8. Rear Differential Connector
    1. Install the harness clips (A).

GETtheMANUALS.org

Fig. 178: Identifying Rear Differential Connector Harness Clips

2. Connect the connectors (A).
3. Install the connector cover (B).

Fig. 179: Identifying Connector Cover And Connectors

9. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Attach the No. 2 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference mark (C) you made during the removal procedure.

GETtheMANUALS.org

2. Install new flange bolts (D) to the specified torque.

Fig. 180: Identifying Rear Differential Companion Flange, Reference Mark, Shaft And Bolts

10. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Clean the drain plug (A), then install it with a new sealing washer (B).
    2. Refill the differential with rear differential fluid to the proper level.

NOTE: **If you disassemble the differential, check the rear differential fluid level again after the 4WD system check is finished. Add fluid if necessary.**

Fluid Capacity:

1.2 L (1.3 US qt) at fluid change

1.5 L (1.6 US qt) at overhaul

Recommended fluid: Honda Dual Pump Fluid II

GETtheMANUALS.org

Fig. 181: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

3. Install the oil filler plug (A) with a new sealing washer (B).

Fig. 182: Identifying Oil Filler Plug And Sealing Washer (Real Time AWD System)

11. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

Fig. 183: Identifying Data Link Connector

12. Real Time AWD System Bleeding
    1. Select the ADJUSTMENT in the REAL TIME AWD SYSTEM with the HDS.
    2. Select the AIR BLEEDING in the ADJUSTMENT with the HDS.

NOTE: See the HDS Help menu for specific instructions.

13. Test Drive
    1. Test-drive the vehicle.
14. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

REAR DIFFERENTIAL OIL SEAL REPLACEMENT - PROPELLER SHAFT SIDE ON VEHICLE

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Driver Handle, 40 mm I.D. 07746-0030100

GETtheMANUALS.org

	
	Oil Seal Driver, 41.8 mm 07947-6890100

GETtheMANUALS.org

	Holder Handle 07JAB-001020B
	Companion Flange Holder 07RAB-TB4010B

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Remove the oil filler plug (A) and the sealing washer (B).

GETtheMANUALS.org

Fig. 184: Identifying Oil Filler Plug And Sealing Washer (Real Time AWD System)

2. Remove the drain plug (A) and the sealing washer (B), then drain the rear differential fluid.

Fig. 185: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

3. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Make a reference mark (A) across the No. 2 propeller shaft (B) and the rear differential companion flange (C).
    2. Remove the No. 2 propeller shaft flange bolts (D).
    3. Separate the No. 2 propeller shaft from the rear differential.

NOTE: Suspend the propeller shaft with an appropriate size nylon strap.

GETtheMANUALS.org

Fig. 186: Identifying Rear Differential Companion Flange, Reference Mark, Shaft And Bolts

4. Rear Differential Companion Flange
    1. Pry up the stake on the locknut (A) from the groove of the clutch guide, making sure the tab completely clears the groove to prevent damaging the clutch guide.

Fig. 187: Prying Up Stake On Locknut Clutch Groove

    2. Install the companion flange holder (A) and holder handle (B) on the companion flange.

GETtheMANUALS.org

Fig. 188: Installing Companion Flange Holder And Holder Handle With Torque Specifications

3. Loosen the locknut (A) counterclockwise so its tab (B) comes out from the groove (C) in the clutch guide.

Fig. 189: Identifying Locknut, Tab, Clutch Guide Groove

4. Tighten the locknut (A) until its tab (B) aligns with the groove (C).
5. Clean any dirt from inside the groove in the clutch guide, then loosen the locknut.

GETtheMANUALS.org

Fig. 190: Identifying Locknut, Tab, Clutch Guide Groove

6. Remove the locknut (A), the spring washer (B), the back-up ring (C), and the O-ring (D).

Fig. 191: Identifying Locknut, Spring Washer, Back-Up Ring And O-Ring

7. Remove the companion flange (A) with a commercially available puller.

Fig. 192: Removing Companion Flange Using Puller

GETtheMANUALS.org

5. Rear Differential Oil Seal Propeller Shaft Side (Real Time AWD System)
    1. Remove the rear differential propeller shaft side oil seal (A).

Fig. 193: Removing Rear Differential Oil Seal Propeller Shaft Side (Real Time AWD System)

INSTALLATION

1. Rear Differential Oil Seal Propeller Shaft Side (Real Time AWD System)
    1. Install a new rear differential propeller shaft side oil seal (A) even and flush with the rear differential oil pump cover using the 40 mm driver handle (B).

Fig. 194: Installing Rear Differential Propeller Shaft Side Oil Seal

2. Rear Differential Companion Flange
    1. Set the companion flange (A) to the clutch guide shaft.

GETtheMANUALS.org

2. Drive on the companion flange using the 41.8 mm oil seal driver.

Fig. 195: Driving On Companion Flange Using Oil Seal Driver

3. Check the length of clutch guide shaft as shown.

NOTE: Make sure to drive on the companion flange until 2 to 3 thread pitches of the clutch guide shaft appears.

Fig. 196: Checking Length Of Clutch Guide Shaft Using Gauge

4. Apply Dual Pump Fluid II to the used locknut.
5. Set the used locknut to the clutch guide shaft.
6. Install the companion flange holder (A) and holder handle (B) on the companion flange.

GETtheMANUALS.org

7. Tighten the used locknut.
8. Remove the used locknut and the companion holder.
9. Check the companion flange has been set to the bottom.

Fig. 197: Installing Companion Flange Holder And Holder Handle On Companion Flange With Torque Specification

10. Apply Dual Pump Fluid II to a new O-ring (A).
11. Install the O-ring, a new back-up ring (B), the spring washer (C), and a new locknut (D).

Fig. 198: Identifying O-Ring, Back-Up Ring, Spring Washer And Locknut

12. Install the companion flange holder (A) and holder handle (B) on the companion flange.
13. Tighten the locknut to the specified torque.

GETtheMANUALS.org

Specified Torque:

107.8 N.m (11.0 kgf.m, 80 lbf.ft)

Fig. 199: Installing Companion Flange Holder And Holder Handle On Companion Flange

14. Stake the locknut tab (A) into the groove in the clutch guide.

Fig. 200: Staking Locknut Tab Into Clutch Guide Groove

3. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Attach the No. 2 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference mark (C) you made during the removal procedure.
    2. Install new flange bolts (D) to the specified torque.

GETtheMANUALS.org

Fig. 201: Identifying Rear Differential Companion Flange, Reference Mark, Shaft And Bolts

4. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Clean the drain plug (A), then install it with a new sealing washer (B).
    2. Refill the differential with rear differential fluid to the proper level.

NOTE: **If you disassemble the differential, check the rear differential fluid level again after the 4WD system check is finished. Add fluid if necessary.**

Fluid Capacity:

1.2 L (1.3 US qt) at fluid change

1.5 L (1.6 US qt) at overhaul

Recommended fluid: Honda Dual Pump Fluid II

GETtheMANUALS.org

Fig. 202: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

3. Install the oil filler plug (A) with a new sealing washer (B).

Fig. 203: Identifying Oil Filler Plug And Sealing Washer (Real Time AWD System)

5. Rear Differential Fluid After Replacement - Check (Real Time AWD System)
    1. Apply the parking brake, and block all four wheels.
    2. Start the engine, and let it idle more than 6 seconds, then turn the engine off. Repeat this step three more times.
    3. Shift to D while pressing the brake pedal firmly. Press the accelerator pedal for 2 seconds, then let it idle. Repeat this three more times.
    4. Check that the real time AWD indicator does not come on. If it does, check for real time AWD system DTC's.
6. HDS DLC - Connection

GETtheMANUALS.org

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
2. Turn the ignition switch to ON (II).
3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 204: Identifying Data Link Connector

7. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

REAR DIFFERENTIAL PRESSURE TEST

TEST

NOTE: Before doing the Pressure Test, check the following conditions.

- Check that the real time AWD indicator does not come on. If it does, check for real time AWD system DTC's.
- Check the rear differential fluid level.
- Check for rear differential fluid leaks at the rear differential assembly.

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

Fig. 205: Identifying Data Link Connector

2. Pressure Test
    1. Select DATA LIST in the REAL TIME AWD SYSTEM with the HDS.
    2. Select OIL TEMPERATURE FOR REAR DIFFERENTIAL in the DATA LIST with the HDS.
        - If the temperature is above 68 °F (20 °C), go to step 3.
        - If the temperature is below 68 °F (20 °C), drive the vehicle to warm up the rear differential until the fluid temperature reaches at least 68 °F (20 °C), then go to step 3.
    3. Start the engine.
    4. Select FUNCTIONAL TEST in the REAL TIME AWD SYSTEM with the HDS.
    5. Select OIL PRESSURE CONTROL TEST in the FUNCTIONAL TEST with the HDS.
    6. Look at the results displayed on the HDS.
        - If Normal is displayed, test is completed.
        - If 1-1 is displayed, go to step 7.
        - If 2-1 and 5-1 is displayed: Go to step 21.
        - If 3-1 is displayed: Go to step 35.
        - If 4-1 and 6-1 is displayed: Go to step 49.
    7. Turn the ignition switch to LOCK (0).
    8. Disconnect the rear differential fluid pressure sensor connector.
    9. Remove the rear differential fluid pressure sensor.
    10. Reconnect the rear differential fluid pressure sensor connector.
    11. Turn the ignition switch to ON (II).
    12. Select the DATA LIST in the REAL TIME AWD SYSTEM with the HDS.
    13. Check the ACTUAL OIL PRESSURE OF THE OIL PRESSURE SENSOR FOR REAR DIFFERENTIAL in the DATA LIST with the HDS.
        - If the fluid pressure is higher than 0-77 kPa (0.0-0.8 kgf/cm^2 , 0-11 psi), replace the rear differential fluid pressure sensor.

GETtheMANUALS.org

- If the fluid pressure is within the range of 0-77 kPa (0.0-0.8 kgf/cm^2 , 0-11 psi), go to step 14.

14. Replace the rear differential fluid.
15. **DO THE REAL TIME AWD SYSTEM BLEEDING WITH THE HDS** .
16. Start the engine.
17. Select FUNCTIONAL TEST in the REAL TIME AWD SYSTEM with the HDS.
18. Select OIL PRESSURE CONTROL TEST in the FUNCTIONAL TEST with the HDS.
19. Look at the results displayed on the HDS.
    - If Normal is displayed, test is completed.
    - If 1-1 is displayed: Go to step 20.
20. **DO THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR TEST WITH THE HDS**. If the rear differential fluid pressure sensor test is OK, replace the rear differential assembly.
21. Turn the ignition switch to LOCK (0).
22. Turn the ignition switch to ON (II).
23. **DO THE REAL TIME AWD SYSTEM BLEEDING WITH THE HDS** .
24. Start the engine.
25. Select FUNCTIONAL TEST in the REAL TIME AWD SYSTEM with the HDS.
26. Select OIL PRESSURE CONTROL TEST in the FUNCTIONAL TEST with the HDS.
27. Look at the results displayed on the HDS.
    - If Normal is displayed, intermittent failure, the system is OK at this time, test is completed.
    - If 2-1 and 5-1 is displayed: Go to step 28.
28. Replace the rear differential fluid.
29. **DO THE REAL TIME AWD SYSTEM BLEEDING WITH THE HDS** .
30. Start the engine.
31. Select FUNCTIONAL TEST in the REAL TIME AWD SYSTEM with the HDS.
32. Select OIL PRESSURE CONTROL TEST in the FUNCTIONAL TEST with the HDS.
33. Look at the results displayed on the HDS.
    - If Normal is displayed, test is completed.
    - If 2-1 and 5-1 is displayed: Go to step 34.
34. Do **THE REAR DIFFERENTIAL FLUID PRESSURE SENSOR TEST** and **THE REAR DIFFERENTIAL SOLENOID VALVE TEST** with the HDS. If the rear differential fluid pressure sensor test and the rear differential solenoid valve test is OK, replace the rear differential assembly.
35. Turn the ignition switch to LOCK (0).
36. Turn the ignition switch to ON (II).
37. **DO THE REAL TIME AWD SYSTEM BLEEDING WITH THE HDS** .
38. Start the engine.
39. Select FUNCTIONAL TEST in the REAL TIME AWD SYSTEM with the HDS.

GETtheMANUALS.org

40. Select OIL PRESSURE CONTROL TEST in the FUNCTIONAL TEST with the HDS.
41. Look at the results displayed on the HDS.
    - If Normal is displayed, intermittent failure, the system is OK at this time, test is completed.
    - If 3-1 is displayed: Go to step 42.
42. Replace the rear differential fluid.
43. **DO THE REAL TIME AWD SYSTEM BLEEDING WITH THE HDS** .
44. Start the engine.
45. Select FUNCTIONAL TEST in the REAL TIME AWD SYSTEM with the HDS.
46. Select OIL PRESSURE CONTROL TEST in the FUNCTIONAL TEST with the HDS.
47. Look at the results displayed on the HDS.
    - If Normal is displayed, test is completed.
    - If 3-1 is displayed: Go to step 48.
48. **DO THE REAR DIFFERENTIAL SOLENOID VALVE TEST WITH THE HDS**. If the rear differential solenoid valve test is OK, replace the rear differential assembly.
49. Turn the ignition switch to LOCK (0).
50. Replace the rear differential fluid.
51. **DO THE REAL TIME AWD SYSTEM BLEEDING WITH THE HDS** .
52. Start the engine.
53. Select FUNCTIONAL TEST in the REAL TIME AWD SYSTEM with the HDS.
54. Select OIL PRESSURE CONTROL TEST in the FUNCTIONAL TEST with the HDS.
55. Look at the results displayed on the HDS.
    - If Normal is displayed, test is completed.
    - If 4-1 and 6-1 is displayed: Go to step 56.
56. **DO THE REAR DIFFERENTIAL SOLENOID VALVE TEST WITH THE HDS**. If the rear differential solenoid valve test is OK, replace the rear differential assembly.

REAR DIFFERENTIAL PUMP MOTOR REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Differential Harness Bracket
    1. Disconnect the breather hose (A) from the pump motor breather pipe (B).
    2. Remove the harness clip (C) and the harness bracket (D).

GETtheMANUALS.org

INSTALLATION

1. Rear Differential Motor Assembly
    1. Install the rear differential pump motor (A) with a new O-ring (B).

Fig. 209: Identifying Rear Differential Pump Motor And O-Ring

2. Rear Differential Motor Connector

GETtheMANUALS.org

1. Connect the connector (A).

Fig. 210: Identifying Rear Differential Motor Connector

3. Rear Differential Harness Bracket
    1. Install the harness bracket (A) and the harness clip (B).
    2. Connect the breather hose (C) to the pump motor breather pipe (D).

Fig. 211: Identifying Harness Bracket, Harness Clip, Breather Hose, Pump Motor Breather Pipe

REAR DIFFERENTIAL REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift

GETtheMANUALS.org

1. Raise the vehicle on a lift, and make sure it is securely supported.

2. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Remove the oil filler plug (A) and the sealing washer (B).

Fig. 212: Identifying Oil Filler Plug And Sealing Washer (Real Time AWD System)

    2. Remove the drain plug (A) and the sealing washer (B), then drain the rear differential fluid.

Fig. 213: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

3. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Make a reference mark (A) across the No. 2 propeller shaft (B) and the rear differential companion flange (C).
    2. Remove the No. 2 propeller shaft flange bolts (D).
    3. Separate the No. 2 propeller shaft from the rear differential.

GETtheMANUALS.org

NOTE: **Suspend the propeller shaft with an appropriate size nylon strap.**

Fig. 214: Identifying Rear Differential Companion Flange, Reference Mark, Shaft And Bolts

4. Rear Differential Connector
    1. Remove the connector cover (A).
    2. Disconnect the connectors (B).

Fig. 215: Identifying Connector Cover And Connectors

    3. Release the harness clips (A).

GETtheMANUALS.org

Fig. 216: Identifying Rear Differential Connector Harness Clips

5. Rear Differential Breather Hoses
    1. Disconnect the breather hoses (A) from the breather pipes (B) and clamps (C).

Differential upper side

Fig. 217: Identifying Breather Hoses, Breather Pipes And Clamps

Pump motor side

GETtheMANUALS.org

Fig. 218: Identifying Breather Hoses, Breather Pipes And Clamps (Pump Motor Side)

2. Disconnect the breather hose (A) from the clamp (B).

Fig. 219: Identifying Breather Hose And Clamp

6. Rear Differential Jack Support
    1. Place a transmission jack under the rear differential assembly.
7. Rear Differential Mount Bracket
    1. Remove the left and right rear differential mount brackets B.

GETtheMANUALS.org

Fig. 220: Identifying Left And Right Rear Differential Mount Brackets With Bolts

2. Remove the mounting bolts (A) and the plates (B).

Fig. 221: Identifying Mounting Bolts And Plates

8. Rear Driveshaft Inboard Side Both - Disconnection

GETtheMANUALS.org

1. Lower the rear differential assembly (A) while pulling both rear driveshaft inboard joints (B) out of the rear differential assembly.

NOTE:

- **Be careful not to damage the driveshaft ring (C) when prying out the driveshaft inboard joints.**
- **Be careful not to damage the oil seals (D).**

Fig. 222: Pulling Both Rear Driveshaft Inboard Joints Out Of Rear Differential Assembly

2. Remove the set ring (A) from inboard joint.

Fig. 223: Identifying Inboard Joint Set Ring

9. Rear Differential Assembly
    1. Remove the rear differential mount assembly A from the rear differential assembly (B).

GETtheMANUALS.org

Fig. 224: Identifying Rear Differential Mount Assembly And Rear Differential Assembly

INSTALLATION

1. Rear Differential Assembly
    1. Install the rear differential mount assembly A to the rear differential assembly (B) with new bolts.

Fig. 225: Identifying Rear Differential Mount Assembly And Rear Differential Assembly With Torque Specifications

2. Rear Driveshaft Inboard Side Both - Reconnection
    1. Install new set ring (A) into the groove (B) of the rear driveshaft inboard joint on both side.

GETtheMANUALS.org

Fig. 226: Identifying Rear Driveshaft Inboard Side Ring And Groove

2. Lift the rear differential assembly (A) up into position.
3. Insert the inboard end (B) of the rear driveshafts (C) into the differential (D) until the set ring (E) locks in the groove (F).

NOTE: **Insert the driveshaft horizontally to prevent damaging the oil seals (G).**

Fig. 227: Lifting Rear Differential Assembly

GETtheMANUALS.org

Fig. 228: Installing Inboard End Of Rear Driveshafts Into Differential

3. Rear Differential Mount Bracket
    1. Align the tabs (A) of the rubber mount (B) with the holes (C) of the plates (D).
    2. Install the rear differential mounting bolts (E).

Fig. 229: Identifying Rear Differential Mounting Bolts, Tabs, Rubber Mount And Holes With Torque Specifications

    3. Install the left and right rear differential mount brackets B.
    4. Tighten new differential mount brackets B mounting bolts (A) to the specified torque.

GETtheMANUALS.org

5. Loosely install new differential mount brackets B mounting bolt (C).

Fig. 230: Identifying Rear Differential Mount Brackets And Mounting Bolts With Torque Specifications

4. Rear Differential Mount Bolt - Tighten
    1. Lower the transmission jack.
    2. Tighten differential mount brackets B mounting bolt to the specified torque.
5. Rear Differential Breather Hoses
    1. Connect the breather hoses (A) to the breather pipes (B) and clamps (C).

Differential upper side

GETtheMANUALS.org

Fig. 231: Identifying Breather Hoses, Breather Pipes And Clamps

Pump motor side

Fig. 232: Identifying Breather Hoses, Breather Pipes And Clamps (Pump Motor Side)

2. Connect the breather hose (A) to the clamp (B).

GETtheMANUALS.org

Fig. 233: Identifying Breather Hose And Clamp

6. Rear Differential Connector
    1. Install the harness clips (A).

Fig. 234: Identifying Rear Differential Connector Harness Clips

    2. Connect the connectors (A).
    3. Install the connector cover (B).

GETtheMANUALS.org

Fig. 235: Identifying Connector Cover And Connectors

7. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Attach the No. 2 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference mark (C) you made during the removal procedure.
    2. Install new flange bolts (D) to the specified torque.

Fig. 236: Identifying Rear Differential Companion Flange, Reference Mark, Shaft And Bolts

8. Rear Differential Fluid - Replacement (Real Time AWD System)

GETtheMANUALS.org

1. Clean the drain plug (A), then install it with a new sealing washer (B).
2. Refill the differential with rear differential fluid to the proper level.

NOTE: **If you disassemble the differential, check the rear differential fluid level again after the 4WD system check is finished. Add fluid if necessary.**

Fluid Capacity:

1.2 L (1.3 US qt) at fluid change

1.5 L (1.6 US qt) at overhaul

Recommended fluid: Honda Dual Pump Fluid II

Fig. 237: Identifying Drain And Sealing Washer (Real Time AWD System)

3. Install the oil filler plug (A) with a new sealing washer (B).

GETtheMANUALS.org

Fig. 238: Identifying Oil Filler Plug And Sealing Washer (Real Time AWD System)

9. HDS DLC - Connection

Fig. 239: Identifying Data Link Connector

   1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
   2. Turn the ignition switch to ON (II).
   3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.
10. Real Time AWD System Bleeding
   1. Select the ADJUSTMENT in the REAL TIME AWD SYSTEM with the HDS.
   2. Select the AIR BLEEDING in the ADJUSTMENT with the HDS.

NOTE: See the HDS Help menu for specific instructions.

GETtheMANUALS.org

11. Test Drive
    1. Test-drive the vehicle.
12. Maintenance Minder Reset
    1. **RESET THE MAINTENANCE MINDER** .

REAR DIFFERENTIAL SOLENOID VALVE TEST

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Oil Seal Driver, 41.8 mm 07947-6890100

GETtheMANUALS.org

	Holder Handle 07JAB-001020B
	Companion Flange Holder 07RAB-TB4010B

TEST

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

Fig. 240: Identifying Data Link Connector

2. Rear Differential Solenoid Valve - Test (With The HDS)
    1. Start the engine.
    2. Select the FUNCTIONAL TEST in the REAL TIME AWD SYSTEM with the HDS.
    3. Select the SOLENOID TEST in the FUNCTIONAL TEST with the HDS.
    4. Do LEVEL 1, then do LEVEL 7 of the SOLENOID TEST in that order with the HDS.
    5. Check for rear differential solenoid valve operation with the HDS. A clicking sound should be heard.
        - If no clicking sound is heard, replace the rear differential solenoid valve.
        - If a clicking sound is heard, go to next procedure.

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Differential Fluid - Replacement (Real Time AWD System)
    1. Remove the oil filler plug (A) and the sealing washer (B).

GETtheMANUALS.org

Fig. 241: Identifying Oil Filler Plug And Sealing Washer (Real Time AWD System)

2. Remove the drain plug (A) and the sealing washer (B), then drain the rear differential fluid.

Fig. 242: Identifying Drain Plug And Sealing Washer (Real Time AWD System)

3. Propeller Shaft Rear Differential Side - Disconnection (With Nylon Strap)
    1. Make a reference mark (A) across the No. 2 propeller shaft (B) and the rear differential companion flange (C).
    2. Remove the No. 2 propeller shaft flange bolts (D).
    3. Separate the No. 2 propeller shaft from the rear differential.

NOTE: Suspend the propeller shaft with an appropriate size nylon strap.

GETtheMANUALS.org

Fig. 243: Identifying Rear Differential Companion Flange, Reference Mark, Shaft And Bolts

4. Rear Differential Connector
    1. Remove the connector cover (A).
    2. Disconnect the connectors (B).

Fig. 244: Identifying Connector Cover And Connectors

3. Release the harness clips (A).

GETtheMANUALS.org

Fig. 245: Identifying Rear Differential Connector Harness Clips

5. Rear Differential Breather Hoses
    1. Disconnect the breather hoses (A) from the breather pipes (B) and clamps (C).

Differential upper side

GETtheMANUALS.org

Fig. 267: Identifying Hose Bracket

20. Rear Differential Companion Flange
    1. Pry up the stake on the locknut (A) from the groove of the clutch guide, making sure the tab completely clears the groove to prevent damaging the clutch guide.

Fig. 268: Prying Up Stake On Locknut Clutch Groove

    2. Install the companion flange holder (A) and holder handle (B) on the companion flange.

GETtheMANUALS.org

Fig. 269: Installing Companion Flange Holder And Holder Handle With Torque Specifications

3. Loosen the locknut (A) counterclockwise so its tab (B) comes out from the groove (C) in the clutch guide.

Fig. 270: Identifying Locknut, Tab, Clutch Guide Groove

4. Tighten the locknut (A) until its tab (B) aligns with the groove (C).
5. Clean any dirt from inside the groove in the clutch guide, then loosen the locknut.

GETtheMANUALS.org

Fig. 271: Identifying Locknut, Tab, Clutch Guide Groove

6. Remove the locknut (A), the spring washer (B), the back-up ring (C), and the O-ring (D).

Fig. 272: Identifying Locknut, Spring Washer, Back-Up Ring And O-Ring

7. Remove the companion flange (A) with a commercially available puller.

Fig. 273: Removing Companion Flange Using Puller

GETtheMANUALS.org

21. Oil Pump Cover
    1. Remove the oil pump cover (A) and oil pump cover seal (B).
    2. Remove the inner rotor (C) and the outer rotor (D).
    3. Remove the fluid strainer (E) and the dowel pins (F).

Fig. 274: Identifying Oil Pump Cover, Seal, Inner And Outer Rotor, Fluid Strainer And Dowel Pins

22. Oil Pump Case
    1. Remove the oil pump case (A).
    2. Remove the dowel pins (B).

Fig. 275: Identifying Oil Pump Case And Dowel Pins

23. Rear Differential Clutch Assembly

GETtheMANUALS.org

1. Remove the baffle cover (A).
2. Remove the differential clutch assembly (B).

Fig. 276: Identifying Differential Clutch Assembly And Baffle Cover

24. Oil Pump Body Assembly
    1. Remove the 32.3 mm shim (A).
    2. Remove the 94.6 mm shim (B).

Fig. 277: Identifying Oil Pump Body Assembly Shim

3. Remove the oil pump body assembly (A).
4. Remove the dowel pins (B) and the O-ring (C).

GETtheMANUALS.org

Fig. 278: Identifying Oil Pump Body Assembly, Dowel Pins And O-Ring

25. Rear Differential Solenoid Valve
    1. Remove the rear differential solenoid valve (A), the O-ring (B), and the square washer (C) from the oil pump body assembly (D).

GETtheMANUALS.org

Fig. 279: Identifying Oil Pump Body Assembly, Rear Differential Solenoid Valve, O-Ring, Square Washer

TEST

1. Rear Differential Solenoid Valve - Test
    1. Connect the tube (A) to the rear differential solenoid valve (B).
    2. Blown the air to the tube.
        - If the air flows out of the port, go to step 3.
        - If the air does not flow out of the port, replace the rear differential solenoid valve.

Fig. 280: Connecting Tube To Rear Differential Solenoid Valve

    3. Connect a jumper wire from the negative battery terminal to the rear differential solenoid valve body, and connect another jumper wire from the positive battery terminal to connector terminal No. 1.
    4. Blown the air to the tube.

GETtheMANUALS.org

- If the air flows out of the port, replace the rear differential solenoid valve.
- If the air does not flow out of the port, the rear differential solenoid valve is OK, and the test is complete.

Fig. 281: Blowing Air To Tube

INSTALLATION

1. Rear Differential Solenoid Valve
    1. Apply Dual Pump Fluid II to a new O-ring (A).
    2. Install the rear differential solenoid valve (B) with the O-ring, and the square washer (C).

GETtheMANUALS.org

Fig. 282: Identifying Rear Differential Solenoid Valve, O-Ring And Square Washer

2. Oil Pump Body Assembly
    1. Apply Dual Pump Fluid II to a new O-ring (A).
    2. Install the dowel pins (B) with the O-ring.
    3. Install the oil pump body assembly (C).

Fig. 283: Identifying Oil Pump Body Assembly, Dowel Pins With O-Ring

4. Install the 32.3 mm shim (A).
5. Install the 94.6 mm shim (B).

GETtheMANUALS.org

Fig. 284: Identifying Oil Pump Body Assembly Shim

3. Rear Differential Clutch Assembly
    1. Install the differential clutch assembly (A).
    2. Install the baffle cover (B).

Fig. 285: Identifying Differential Clutch Assembly And Baffle Cover

4. Oil Pump Case
    1. Remove the dirt and oil from the sealing surfaces.
    2. Apply liquid gasket (P/N 08718-0004 or 08718-0009) evenly to the sealing surface.
    3. Install the component within 5 minutes of applying the liquid gasket. Make sure you seal the entire circumference of the bolt holes to prevent fluid leakage.

GETtheMANUALS.org

NOTE:

- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply the new liquid gasket.**
- **Allow it to cure at least 30 minutes after assembly before filling the differential with the recommended fluid.**

Fig. 286: Identifying Liquid Gasket Applying Area

4. Install the dowel pins (A).
5. Install the oil pump case (B).
6. Torque the eight mounting bolts in a crisscross pattern in several steps.

Fig. 287: Identifying Oil Pump Case, Dowel Pins With Torque Specifications

GETtheMANUALS.org

5. Oil Pump Cover
    1. Install the fluid strainer (A) and the dowel pins (B).
    2. Install the inner rotor (C) and the outer rotor (D) with the "." marks (E) facing the oil pump case side.
    3. Install the oil pump cover (F) with a new oil pump cover seal (G).
    4. Torque the six mounting bolts in a crisscross pattern in several steps.

Fig. 288: Identifying Oil Pump Cover, Seal, Inner And Outer Rotor, Fluid Strainer And Dowel Pins

6. Rear Differential Companion Flange
    1. Set the companion flange (A) to the clutch guide shaft.
    2. Drive on the companion flange using the 41.8 mm oil seal driver.

GETtheMANUALS.org

Fig. 289: Driving On Companion Flange Using Oil Seal Driver

3. Check the length of clutch guide shaft as shown.

NOTE: **Make sure to drive on the companion flange until 2 to 3 thread pitches of the clutch guide shaft appears.**

Fig. 290: Checking Length Of Clutch Guide Shaft Using Gauge

4. Apply Dual Pump Fluid II to the used locknut.
5. Set the used locknut to the clutch guide shaft.
6. Install the companion flange holder (A) and holder handle (B) on the companion flange.
7. Tighten the used locknut.
8. Remove the used locknut and the companion holder.

GETtheMANUALS.org

9. Check the companion flange has been set to the bottom.

Fig. 291: Installing Companion Flange Holder And Holder Handle On Companion Flange

10. Apply Dual Pump Fluid II to a new O-ring (A).
11. Install the O-ring, a new back-up ring (B), the spring washer (C), and a new locknut (D).

Fig. 292: Identifying O-Ring, Back-Up Ring, Spring Washer And Locknut

12. Install the companion flange holder (A) and holder handle (B) on the companion flange.
13. Tighten the locknut to the specified torque.

Specified Torque:

107.8 N.m (11.0 kgf.m, 80 lbf.ft)

GETtheMANUALS.org

Fig. 293: Installing Companion Flange Holder And Holder Handle On Companion Flange

14. Stake the locknut tab (A) into the groove in the clutch guide.

Fig. 294: Staking Locknut Tab Into Clutch Guide Groove

REAR CONTROLLER AND SCREEN REMOVAL AND INSTALLATION

LON > 0101D7

REMOVAL

1. Rear Display Cover
    1. Turn the ceiling light switch OFF.
    2. Carefully pry off the lenses (A) with a flat-tip screwdriver.
    3. Remove the ceiling light (B).
    4. Disconnect the connector.

Fig. 1: Identifying Ceiling Light And Cover

DVD PLAYER UNIT 24P CONNECTOR

Cavity	Wire Color	Terminal Name	Description
1	PNK	RES_SYS_ACC	Detects DVD player unit switching ON/OFF
2	GRY	ILLUMI+	Detects parking light on signal
3	LT GRN	AUX_GND	Ground for AUX sound signal
4	GRY(1)	SH _AUX	Shield for terminals No. 5, No. 16, and No. 17
5	BLK	AUX_SGND	Ground for sound signal from DVD player unit
6	GRY(1)	SH_HP_LR	Shield for terminals No. 7, No. 18, and No. 19
7	WHT	HP_LR_GND	Ground for sound signal
8	YEL	RES_VIDEO_GND	Ground for video signal
9	BLU	SCTY_DVD	Security signal from DVD player unit
10	RED	RES_BUS+	RES (GA-Net) bus communication signal
11	LT GRN	ACC	Power source for accessories
12	GRN	+B_BACK_UP	Continuous power source

GETtheMANUALS.org

13	BLK	GND	Ground for DVD player unit (G503)
14	GRN	ILL-(LED)	Detects illumination control signal
15	LT BLU	AUX_DET	Detects connection signal for DVD player unit
16	RED	AUX_R_CH	Outputs AUX sound signal to audio unit
17	WHT	AUX_L_CH	Outputs AUX sound signal to audio unit
18	RED	HP_R_SIG	Outputs video signal from rear controller and screen
19	BLK	HP_L_SIG	Outputs video signal from rear controller and screen
20	GRY(1)	SH_RES_VIDEO	Shield for terminals No. 8 and No. 21
21	BRN	RES_VIDEO_SIG	Outputs RES video signal
22	WHT	SCTY_RADIO_SW	Security signal to audio unit
23	GRN	RES_BUS-	RES (GA-Net) bus communication signal
24	GRY(1)	SH_RES_BUS	Shield for terminals No. 10 and No. 23

(1) The shielded wires have a heat-shrink tube insulating the outside of the wire. The color of the insulating tube, typically black or dark gray, may not match the color of the wire shown on the circuit diagram.

DVD PLAYER UNIT BUTTON ILLUMINATION DOES NOT WORK

GETtheMANUALS.org

Rear Entertainment System Symptom Troubleshooting - DVD player unit button illumination does not work

Fig. 14: Rear Entertainment System Symptom Troubleshooting Flow Chart (DVD Player Unit Button Illumination Not Working)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Turn the combination lighting switch to the parking light position.
   - 3. Check if the DVD player unit buttons are illuminated.

Are the buttons illuminated?

YES : Intermittent failure, the audio unit is OK at this time.

NO : The failure is duplicated, go to step 2.

GETtheMANUALS.org

2. Determine possible failure area (interior lights circuit, others):
    - 1. Check if several other buttons that are not related to the rear entertainment system are illuminated.

Are the buttons illuminated?

YES : Go to step 3.

NO : Troubleshoot the interior lights.

3. Determine possible failure area (DVD player unit, others):
    - 1. **Do the RES self-diagnostic function to check the DVD INFO diagnosis** See **HOW TO TROUBLESHOOT THE REAR ENTERTAINMENT SYSTEM** or **REAR ENTERTAINMENT SYSTEM SELF-DIAGNOSTIC FUNCTION** .

Are the ILL+ and the ILL-LED value OK?

YES : REPLACE THE DVD PLAYER UNIT .

NO : Go to step 4.

4. Open wire check (ILLUMI+ line):
    - 1. Turn the combination lighting switch off.
    - 2. Turn the ignition switch to LOCK (0).
    - 3. Disconnect the following connector.

      DVD player unit 24P connector

    - 4. Turn the ignition switch to ON (II).
    - 5. Turn the combination lighting switch to the parking light position.
    - 6. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      DVD player unit 24P connector: disconnected

      Test circuit ILLUMI+

      Test point 1 DVD player unit 24P connector No. 2 (GRY)

      Test point 2 Body ground

GETtheMANUALS.org

Fig. 15: Measuring Voltage Between DVD Player Unit 24P Connector No. 2 (GRY) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The ILLUMI+ wire is OK. Go to step 5.

NO : Repair an open in the wire between the No. B35 (7.5 A) fuse in the under-dash fuse/relay box and the DVD player unit.

5. Open wire check (ILLUMI-(LED) line):
   - 1. Turn the combination lighting switch off.
   - 2. Turn the ignition switch to LOCK (0).
   - 3. Disconnect the following connector.

     Gauge control module 32P connector

   - 4. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     DVD player unit 24P connector: disconnected

     Gauge control module 32P connector: disconnected

     Test circuit ILLUMI-(LED)

     Test point 1 DVD player unit 24P connector No. 14 (GRN)

     Test point 2 Gauge control module 32P connector No. 15 (GRN)

GETtheMANUALS.org

Fig. 16: Checking Continuity Between DVD Player Unit 24P Connector No. 14 (GRN) And Gauge Control Module 32P Connector No. 15 (GRN)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : REPLACE THE DVD PLAYER UNIT .

NO : Repair an open in the wire between the DVD player unit and the gauge control module.

NO RES SOUND IS HEARD FROM THE SPEAKER(S) (REAR DISPLAY IS NORMAL)

GETtheMANUALS.org

Rear Entertainment System Symptom Troubleshooting - No RES sound is heard from the speaker(s) (rear display is normal)

Fig. 17: Rear Entertainment System Symptom Troubleshooting Flow Chart (No RES Sound Heard From Speaker 1 Of 2)

Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Fig. 18: Rear Entertainment System Symptom Troubleshooting Flow Chart (No RES Sound Heard From Speaker 2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **DVD-R/RWs will not work in the DVD player unit.**
- **Damaged or contaminated discs may not always play properly.**
- **Discs with labels should not be used in the DVD player unit. They may damage the player mechanism.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Open the rear screen.
    - 3. Play a known-good disc to see if the symptom can be duplicated.

GETtheMANUALS.org

Is the symptom duplicated?

YES : The failure is duplicated, go to step 2.

NO : Intermittent failure, the system is OK at this time.

2. Determine possible failure area (AUX GND line, others):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connector.

      Audio unit connector B (20P)

    - 3. Turn the ignition switch to ON (II).
    - 4. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      Audio unit connector B (20P): disconnected

      Test circuit AUX GND

      Test point 1 Audio unit connector B (20P) No. 6 (LT GRN)

      Test point 2 Body ground

Fig. 19: Measuring Voltage Between Audio Unit Connector B (20P) No. 6 (LT GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 3.0 V?

YES : The AUX GND wire is OK. Go to step 4.

NO : Go to step 3.

GETtheMANUALS.org

3. Open wire check (AUX GND line):
    - 1. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      Audio unit connector B (20P): disconnected

      Test circuit AUX GND

      Test point 1 DVD player unit 24P connector No. 3 (LT GRN)

      Test point 2 Body ground

Fig. 20: Measuring Voltage Between DVD Player Unit 24P Connector No. 3 (LT GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 3.0 V?

YES : Repair an open in the wire between the DVD player unit and the audio unit.

NO : REPLACE THE DVD PLAYER UNIT .

4. Determine possible failure area (audio unit, others):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Reconnect audio unit connector B (20P).
    - 3. Turn the ignition switch to ON (II).
    - 4. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      Test circuit AUX GND

      Test point 1 Audio unit connector B (20P) No. 6 (LT GRN)

GETtheMANUALS.org

Test point 2 Body ground

Fig. 21: Measuring Voltage Between Audio Unit Connector B (20P) No. 6 (LT GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : Go to step 5.

NO : REPLACE THE AUDIO UNIT .

5. Determine possible failure area (AUX DET line, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the following connector.

     DVD player unit 24P connector

   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     DVD player unit 24P connector: disconnected

     Test circuit AUX DET

     Test point 1 DVD player unit 24P connector No. 15 (LT BLU)

     Test point 2 Body ground

GETtheMANUALS.org

Fig. 22: Measuring Voltage Between DVD Player Unit 24P Connector No. 15 (LT BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 3.0 V?

YES : The AUX DET wire is OK. Go to step 7.

NO : Go to step 6.

6. Open wire check (AUX DET line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG ON (II)

     DVD player unit 24P connector: disconnected

     Test circuit AUX DET

     Test point 1 Audio unit connector B (20P) No. 16 (LT BLU)

     Test point 2 Body ground

GETtheMANUALS.org

Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 3.0 V?

YES : Repair an open in the wire between the DVD player unit and the audio unit.

NO : REPLACE THE AUDIO UNIT .

7. Determine possible failure area (DVD player unit, others):
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Reconnect the DVD player unit 24P connector.
   - 3. Turn the ignition switch to ON (II).
   - 4. Measure the voltage between test points 1 and 2.

   Test condition IG ON (II)

   Test circuit AUX DET

   Test point 1 DVD player unit 24P connector No. 15 (LT BLU)

   Test point 2 Body ground

Fig. 24: Measuring Voltage Between DVD Player Unit 24P Connector No. 15 (LT BLU) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : Go to step 8.

NO : REPLACE THE DVD PLAYER UNIT .

8. Shorted wire check (AUX L CH line, AUX R CH line):

GETtheMANUALS.org

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the following connectors.

  Audio unit connector B (20P)

  DVD player unit 24P connector

- 3. Check for continuity between test points 1 and 2.

  Test condition IG LOCK (0)

  Audio unit connector B (20P): disconnected

  DVD player unit 24P connector: disconnected

  Test circuit AUX L CH

  Test point 1 Audio unit connector B (20P) No. 18 (WHT)

  Test point 2 Body ground

  Test circuit AUX R CH

  Test point 1 Audio unit connector B (20P) No. 17 (RED)

  Test point 2 Body ground

Fig. 25: Checking Continuity Between Audio Unit Connector B (20P) No. 17 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire(s) between the audio unit and the DVD player unit. Replace the affected shielded harness.

GETtheMANUALS.org

NO : The AUX R CH and the AUX L CH wires are not shorted to ground. Go to step 9.

9. Shorted wire check (SH AUX line to another lines):
   - 1. Check for continuity between test points 1 and 2.

     Test condition IG LOCK (0)

     Audio unit connector B (20P): disconnected

     DVD player unit 24P connector: disconnected

     Test circuit AUX R CH, SH AUX

     Test point 1 Audio unit connector B (20P) No. 17 (RED)

     Test point 2 Audio unit connector B (20P) No. 7 (GRY)

     Test circuit AUX L CH, SH AUX

     Test point 1 Audio unit connector B (20P) No. 18 (WHT)

     Test point 2 Audio unit connector B (20P) No. 7 (GRY)

Fig. 26: Checking Continuity Between Audio Unit Connector B (20P) No. 17 (RED) And No. 7 (GRY)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short in the wires between the audio unit and the DVD player unit. Replace the affected shielded harness.

NO : The SH AUX wire is OK. Go to step 10.

10. Shorted wire check (AUX SGND line to another lines):
    - 1. Check for continuity between test points 1 and 2.

GETtheMANUALS.org

Test condition IG LOCK (0)

Audio unit connector B (20P): disconnected

Fig. 29: Identifying DVD Player Unit 24P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The AUX wires are OK. Go to step 12.

NO : There is an open in the wire(s) between the audio unit and the auxiliary jack assembly. Replace the affected harness.

12. Audio unit check:
    - 1. SUBSTITUTE A KNOWN-GOOD DVD PLAYER UNIT, AND RECHECK .

Does the symptom go away?

YES : Replace the original DVD player unit.

NO : REPLACE THE AUDIO UNIT .

NO SOUND/NO DISPLAY WITH AUXILIARY VIDEO UNIT INPUTS ONLY

GETtheMANUALS.org

Fig. 30: Rear Entertainment System Symptom Troubleshooting Flow Chart (No Sound/No Display With Auxiliary Video Unit Inputs Only)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check that the auxiliary device is properly connected, and has fresh batteries or power source connected.**
- **Do not connect an RCA type shorting plug with the RES auxiliary jack connected, or system damage may occur.**
- **You need to switch the DVD player unit REAR POWER button on for the rear display, remote controls, and sound to operate.**
- **Check the connectors for poor connections or loose terminals.**

1. Determine possible failure area (RES auxiliary jack, others):
    - 1. Turn the ignition switch to ON (II).

GETtheMANUALS.org

- 2. Open the rear screen.
- 3. Press the REAR POWER button, then press the SOURCE button to select the AUX mode.

Does the rear screen change to the AUX mode?

YES : Go to step 2.

NO : Go to **RES POWER WILL NOT TURN ON (NO INFORMATION DISPLAY) TROUBLESHOOTING**.

2. Problem verification:
   - 1. Connect an auxiliary video source to the RES auxiliary jack on the DVD player unit, and check the volume/display operation.

Does the display operate properly and does the audio sound normal?

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated, go to step 3

3. Determine possible failure area (auxiliary video accessory, others):
   - 1. Substitute a known-good auxiliary video accessory and/or auxiliary stereo cable, and recheck.

Does the auxiliary video accessory operate properly?

YES : Original auxiliary video accessory or auxiliary stereo cable is faulty.

NO : **No RES sound is heard from the speaker(s) (rear display is normal)**.

NO : **No video display appears on the rear screen**.

NO : REPLACE THE DVD PLAYER UNIT .

NO VIDEO DISPLAY APPEARS ON THE REAR SCREEN

GETtheMANUALS.org

Rear Entertainment System Symptom Troubleshooting - No video display appears on the rear screen

Is there continuity?

YES : The RES VIDEO SIG and the RES VIDEO GND wires are OK. Go to step 5.

NO : There is an open in the wire(s) between the DVD player unit and the rear controller and screen.

GETtheMANUALS.org

Replace the affected shielded harness.

5. Rear controller and screen check:
   - 1. SUBSTITUTE A KNOWN-GOOD DVD PLAYER UNIT, AND RECHECK .

   Does the symptom go away?

   YES : Replace the original DVD player unit.

   NO : **REPLACE THE REAR CONTROLLER AND SCREEN**.

REAR SCREEN BACKLIGHT DOES NOT DIM/REMAINS DIM

Fig. 35: Rear Entertainment System Symptom Troubleshooting Flow Chart (Rear Screen Backlight Does Not Dim/Remains Dim)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Turn the combination lighting switch to the parking light position.
   - 3. Rotate the dashlights brightness controller knob several times.

   Does the rear screen brightness change?

GETtheMANUALS.org

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated, go to step 2.

2. Determine possible failure area (DVD player unit, others):
    - 1. Rotate the dashlights brightness controller knob several times.

Does the DVD player unit buttons brightness change?

YES : Go to step 3.

NO : Go to **DVD PLAYER UNIT BUTTON ILLUMINATION DOES NOT WORK TROUBLESHOOTING**.

3. Open wire check (ILLUMI+ line):
    - 1. Turn the combination lighting switch off.
    - 2. Turn the ignition switch to LOCK (0).
    - 3. Disconnect the following connector.

      Rear controller and screen 16P connector

    - 4. Turn the ignition switch to ON (II).
    - 5. Turn the combination lighting switch to the parking light position.
    - 6. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      Rear controller and screen 16P connector: disconnected

      Test circuit ILLUMI+

      Test point 1 Rear controller and screen 16P connector No. 3 (GRY)

      Test point 2 Body ground

REAR CONTROLLER AND SCREEN 16P CONNECTOR

Wire side of female terminals

GETtheMANUALS.org

Fig. 36: Measuring Voltage Between Rear Controller And Screen 16P Connector No. 3 (GRY) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : **REPLACE THE REAR CONTROLLER AND SCREEN**.

NO : Repair an open in the wire between the No. B35 (7.5 A) fuse in the under-dash fuse/relay box and the rear controller and screen.

RES DISC DOES NOT EJECT

Fig. 37: Rear Entertainment System Symptom Troubleshooting Flow Chart (RES Disc Not Eject)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Discs with labels should not be used in the DVD player unit. They may damage the player mechanism.**
- **Make sure the disc is compatible with the system (see the Owner's Manual for more information).**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Check to see if the disc ejects correctly with no binding by pushing the EJECT button.

Does the disc eject normally?

GETtheMANUALS.org

YES : Intermittent failure, the system is OK at this time.

NO : The failure is duplicated, but the disc can be ejected, go to step 2.

NO : REPLACE THE DVD PLAYER UNIT .

2. DVD player unit check:
   - 1. Insert another disc.

Does the disc eject normally?

YES : The original disc is faulty.

NO : REPLACE THE DVD PLAYER UNIT .

RES DISC DOES NOT LOAD

Fig. 38: Rear Entertainment System Symptom Troubleshooting Flow Chart (RES Disc Not Load)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Discs with labels should not be used in the DVD player unit. They may damage the player mechanism.**
- **Make sure the disc is compatible with the system (see the Owner's Manual for more information).**
- **Check the connectors for poor connections or loose terminals.**

GETtheMANUALS.org

1. Determine possible failure area (disc loading system, others):
    - 1. Turn the ignition switch to ON (II).
    - 2. Press the REAR POWER button, and check if the REAR POWER button LED comes on.

    Is the REAR POWER button LED come on?

    YES : Go to step 2.

    NO : Go to **RES POWER WILL NOT TURN ON (NO INFORMATION DISPLAY) TROUBLESHOOTING**.

2. Problem verification:
    - 1. Try loading a disc.

    Does the disc load?

    YES : Intermittent failure, the system is OK at this time. If the disc loads normally, but will not play, go to **RES DISC DOES NOT PLAY TROUBLESHOOTING**.

    NO : The failure is duplicated, go to step 3.

3. DVD player unit check:
    - 1. Insert another disc.

    Does the disc load?

    YES : The original disc is faulty.

    NO : REPLACE THE DVD PLAYER UNIT .

RES DISC DOES NOT PLAY

GETtheMANUALS.org

Fig. 39: Rear Entertainment System Symptom Troubleshooting Flow Chart (RES Disc Not Play)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **DVD-R/RWs will not work in the DVD player unit.**
- **Damaged or contaminated discs may not always play properly.**
- **Discs with labels should not be used in the DVD player unit. They may damage the player mechanism.**
- **You need to switch the DVD player unit REAR POWER button on for the rear screen, remote controls, and sound to operate.**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Insert a disc to see if the symptom can be duplicated.

   Does the disc play?

   YES : Intermittent failure, the system is OK at this time.

   NO : The failure is duplicated, go to step 2.

2. DVD player unit check:
   - 1. Insert a known-good disc.

   Does the DVD play (display properly and sound normal)?

   YES : The original disc is faulty, or has an unreadable format.

   NO : REPLACE THE DVD PLAYER UNIT .

RES DISC SKIPS

GETtheMANUALS.org

Fig. 40: Rear Entertainment System Symptom Troubleshooting Flow Chart (RES Disc Skips)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Copy protected material on a CD-R/RW or a DVD-R/RW disc will skip or not play.**
- **Check for scratches, smudges, and fingerprints on the disc.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Try playing a disc.

   Does the disc skip?

   YES : The failure is duplicated, go to step 2.

   NO : Intermittent failure, the system is OK at this time.

2. Determine possible failure area (disc, others):
   - 1. Eject the original disc, and insert a known-good disc, and recheck.

   Does the disc play properly?

   YES : The original disc is dirty or the wrong type.

   NO : Go to step 3.

GETtheMANUALS.org

3. DVD player unit check:
    - 1. Compare the disc skipping to a known-good vehicle under the same conditions.

    Does the known-good vehicle's disc skip under the same conditions (over the same bumps and on the same rough roads)?

    YES : Operation is normal.

    NO : REPLACE THE DVD PLAYER UNIT .

GETtheMANUALS.org

Rear Entertainment System Symptom Troubleshooting - RES power will not turn on (No information display)

RES POWER WILL NOT TURN ON (NO INFORMATION DISPLAY)

GETtheMANUALS.org

GETtheMANUALS.org

Fig. 42: Rear Entertainment System Symptom Troubleshooting Flow Chart (RES Power Will Not Turn On 2 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Before you troubleshoot, make sure to follow the How to Troubleshoot the Rear Entertainment System See HOW TO TROUBLESHOOT THE REAR ENTERTAINMENT SYSTEM or REAR ENTERTAINMENT SYSTEM SELF-DIAGNOSTIC FUNCTION .**
- **Check the connectors for poor connections or loose terminals.**

1. Problem verification:
   - 1. Turn the ignition switch to ON (II).
   - 2. Turn the Rear Power button on.
   - 3. Open the rear screen, and check if the rear screen turns on.

   Does the rear screen turns on (displays the opening screen)?

   YES : Go to step 3.

   NO : The failure is duplicated, go to step 2.

2. Determine possible failure area (DVD player unit power and ground circuit, others):
   - 1. Press the REAR POWER button on the DVD player unit, and check if the REAR POWER button LED comes on.

   Does the REAR POWER button LED come on?

   YES : Go to step 8.

   NO : Go to step 4.

3. Rear controller and screen check:
   - 1. **Do the RES self-diagnostic function with the DVD player unit** See **HOW TO TROUBLESHOOT THE REAR ENTERTAINMENT SYSTEM** or **REAR ENTERTAINMENT SYSTEM SELF-DIAGNOSTIC FUNCTION** .

   Does the self-diagnosis start, and is the CONNECT diagnosis OK?

   YES : Intermittent failure, the system is OK at this time.

   NO : **REPLACE THE REAR CONTROLLER AND SCREEN**.

4. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).

GETtheMANUALS.org

- 2. Check the following fuse.

  Fuse No. B19 (7.5 A)

  Location Under-dash fuse/relay box

Is the fuse OK?

YES : Go to step 5.

NO : Replace the fuse, and recheck. If the fuse blows again, check for a short in the No. B19 (7.5 A) fuse circuit.

5. Open wire check (+B BACK UP line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     Test circuit +B BACK UP

     Test point 1 DVD player unit 24P connector No. 12 (GRN)

     Test point 2 Body ground

Fig. 43: Measuring Voltage Between DVD Player Unit 24P Connector No. 12 (GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B BACK UP wire is OK. Go to step 6.

NO : Repair an open or high resistance in the wire between the No. A29 (10 A) fuse in the under-hood fuse/relay box and the DVD player unit.

GETtheMANUALS.org

6. Open wire check (ACC line):
    - 1. Turn the ignition switch to ON (II).
    - 2. Measure the voltage between test points 1 and 2.

    Test condition IG ON (II)

    Test circuit ACC

    Test point 1 DVD player unit 24P connector No. 11 (LT GRN)

    Test point 2 Body ground

Fig. 44: Measuring Voltage Between DVD Player Unit 24P Connector No. 11 (LT GRN) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The ACC wire is OK. Go to step 7.

NO : Repair an open or high resistance in the wire between the No. B19 (7.5 A) fuse in the under-dash fuse/relay box and the DVD player unit.

7. Open wire check (GND line):
    - 1. Measure the voltage between test points 1 and 2.

    Test condition IG ON (II)

    Test circuit GND

    Test point 1 DVD player unit 24P connector No. 13 (BLK)

    Test point 2 Body ground

GETtheMANUALS.org

Fig. 45: Measuring Voltage Between DVD Player Unit 24P Connector No. 13 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : REPLACE THE DVD PLAYER UNIT .

NO : Repair an open or high resistance in the wire between the DVD player unit and body ground (G503).

8. Fuse check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the following fuse.

     Fuse No. A29 (10 A)

     Location Under-hood fuse/relay box

Is the fuse OK?

YES : Go to step 9.

NO : Replace the fuse, and recheck. If the fuse blows again, check for a short in the No. A29 (10 A) fuse circuit.

9. Open wire check (+B BACK UP line):
   - 1. Measure the voltage between test points 1 and 2.

     Test condition IG LOCK (0)

     Test circuit +B BACK UP

     Test point 1 Rear controller and screen 16P connector No. 1 (RED)

GETtheMANUALS.org

Test point 2 Body ground

Fig. 46: Measuring Voltage Between Rear Controller And Screen 16P Connector No. 1 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES : The +B BACK UP wire is OK. Go to step 10.

NO : Repair an open or high resistance in the wire between the No. A29 (10 A) fuse in the under-hood fuse/relay box and the rear controller and screen.

10. Open wire check (GND line):
    - 1. Turn the ignition switch to ON (II).
    - 2. Measure the voltage between test points 1 and 2.

    Test condition IG ON (II)

    Test circuit GND

    Test point 1 Rear controller and screen 16P connector No. 16 (BLK)

    Test point 2 Body ground

GETtheMANUALS.org

Fig. 47: Measuring Voltage Between Rear Controller And Screen 16P Connector No. 16 (BLK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The GND wire is OK. Go to step 11.

NO : Repair an open or high resistance in the wire between the rear controller and screen and body ground (G501).

11. Shorted wire check (RES SYS ACC line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connectors.

      DVD player unit 24P connector

      Rear controller and screen 16P connector

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      DVD player unit 24P connector: disconnected

      Rear controller and screen 16P connector: disconnected

      Test circuit RES SYS ACC

      Test point 1 Rear controller and screen 16P connector No. 8 (PNK)

      Test point 2 Body ground

GETtheMANUALS.org

Fig. 48: Checking Continuity Between Rear Controller And Screen 16P Connector No. 8 (PNK) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : Repair a short to body ground in the wire between the DVD player unit and the rear controller and screen.

NO : The RES SYS ACC wire is not shorted to ground. Go to step 12.

12. Open wire check (RES SYS ACC line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      DVD player unit 24P connector: disconnected

      Rear controller and screen 16P connector: disconnected

      Test circuit RES SYS ACC

      Test point 1 Rear controller and screen 16P connector No. 8 (PNK)

      Test point 2 DVD player unit 24P connector No. 1 (PNK)

GETtheMANUALS.org

Fig. 49: Checking Continuity Between Rear Controller And Screen 16P Connector No. 8 (PNK) And DVD Player Unit 24P Connector No. 1 (PNK)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : The RES SYS ACC wire is OK. Go to step 13.

NO : Repair an open in the wire between the DVD player unit and the rear controller and screen.

13. Shorted wire check (RES BUS+ line, RES BUS- line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      DVD player unit 24P connector: disconnected

      Rear controller and screen 16P connector: disconnected

      Test circuit RES BUS+

      Test point 1 DVD player unit 24P connector No. 10 (RED)

      Test point 2 Body ground

      Test circuit RES BUS-

      Test point 1 DVD player unit 24P connector No. 23 (GRN)

      Test point 2 Body ground

GETtheMANUALS.org

Fig. 50: Checking Continuity Between DVD Player Unit 24P Connector No. 10 (RED) And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES : There is a short to body ground in the wire(s) between the DVD player unit and the rear controller and screen. Replace the affected shielded harness.

NO : The RES BUS+ and the RES BUS- wires are not shorted to ground. Go to step 14.

14. Shorted wire check (RES BUS+ line to RES BUS- line):
    - 1. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      DVD player unit 24P connector: disconnected

      Rear controller and screen 16P connector: disconnected

      Test circuit RES BUS+, RES BUS-

      Test point 1 DVD player unit 24P connector No. 10 (RED)

      Test point 2 DVD player unit 24P connector No. 23 (GRN)

Is there continuity?

YES : The RES BUS+ and the RES BUS- wires are OK. Go to step 17.

NO : There is an open in the wire(s) between the DVD player unit and the rear controller and screen. Replace the affected shielded harness.

17. DVD player unit check:
    - 1. **SUBSTITUTE A KNOWN-GOOD REAR CONTROLLER AND SCREEN, AND RECHECK**.

Does the symptom go away?

YES : Replace the original rear controller and screen.

NO : REPLACE THE DVD PLAYER UNIT .

WIRELESS HEADPHONE SOUND IS WEAK, SOUND IS DISTORTED, THERE IS STATIC, VOLUME DOES NOT CHANGE, OR THERE IS NO SOUND IN ALL MODES

GETtheMANUALS.org

Rear Entertainment System Symptom Troubleshooting - Wireless headphone sound is weak, sound is distorted, there is static, volume does not change, or there is no sound in all modes

Fig. 54: Rear Entertainment System Symptom Troubleshooting Flow Chart (Wireless Headphone Weak Sound)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **CHECK THE VEHICLE BATTERY CONDITION FIRST .**
- **Check the wireless headphone battery condition.**
- **Check the lens on the rear edge of the rear screen for dirt or damage.**
- **You may use known-good headphones from a factory installed or accessory RES, but it must be a similar vehicle.**
- **Check the connectors for poor connections or loose terminals.**

GETtheMANUALS.org

1. Problem verification:
    - 1. Turn the ignition switch to ON (II).
    - 2. Play a known-good disc to see if the symptom can be duplicated.

    Is the symptom duplicated?

    YES : The failure is duplicated, go to step 2.

    NO : Intermittent failure, the system is OK at this time.

2. Check the batteries in the wireless headphone:
    - 1. Replace the batteries in the wireless headphone.

    Does the symptom go away?

    YES : Weak or poor batteries. The headphones are OK.

    NO : Go to step 3.

3. Determine possible failure area (wireless headphone, others):
    - 1. Substitute a known-good wireless headphone, and recheck.

    Does the symptom go away?

    YES : Replace the original wireless headphone.

    NO : Go to step 4.

4. Shorted wire check (HP L SIG line, HP R SIG line):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the following connectors.

      DVD player unit 24P connector

      Rear controller and screen 16P connector

    - 3. Check for continuity between test points 1 and 2.

      Test condition IG LOCK (0)

      DVD player unit 24P connector: disconnected

DISASSEMBLY

NOTE:

- **When compressing the damper spring, use a commercially available strut spring compressor (Branick MST-580A or Model 7200, or equivalent) according to the manufacturer's instructions.**
- **Refer to the Exploded View as needed during the following procedure.**

1. Rear Damper
    1. Remove the rubber type damper hook (A) (if equipped).

    NOTE: **If a metal type damper hook is installed, discard it. The metal type damper hook is for factory assembly only.**

Fig. 2: Identifying Rubber Type Damper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Compress the damper spring.

    NOTE: **Do not compress the spring more than necessary to remove the nut.**

    3. Remove the self-locking nut (A) while holding the damper shaft with a hex wrench (B).
    4. Release the pressure from the strut spring compressor.
    5. Disassemble the damper as shown in the Exploded View.

GETtheMANUALS.org

Fig. 3: Compressing Damper Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

1. Rear Damper - Inspection
    1. Reassemble all the parts, except the spring mounting cushion, the dust cover, the bump stop, and the damper spring.
    2. Compress the damper assembly by hand, and check for smooth operation through a full stroke, both compression and extension. The damper should extend smoothly and constantly when compression is released. If it does not, the gas is leaking and the damper should be replaced.
    3. Check for oil leaks, abnormal noises, or binding during these tests.

GETtheMANUALS.org

Fig. 4: Checking For Oil Leaks, Abnormal Noises And Binding
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REASSEMBLY

NOTE:

- **When compressing the damper spring, use a commercially available strut spring compressor (Branick MST-580A or Model 7200, or equivalent) according to the manufacturer's instructions.**
- **Refer to the Exploded View as needed during the following procedure.**

1. Rear Damper
    1. Install all the parts except the self-locking nut and the cap onto the damper unit (A) by referring to the **EXPLODED VIEW**.
    2. Compress the damper spring.

        NOTE: Do not compress the spring excessively.

    3. Align the bottom of the damper spring (B) with the stepped part (C) of the lower spring seat.

GETtheMANUALS.org

Fig. 5: Compressing Damper Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Align the angle of the stud (A) on the damper mounting base (B) with the bolt hole (C) on the bottom of the damper unit as shown.

Fig. 6: Aligning Angle Of Stud On Damper Mounting Base With Bolt Hole
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the damper mounting washer (A).
6. Install the new self-locking nut (B).

GETtheMANUALS.org

7. Hold the damper shaft using a hex wrench (C), and tighten the self-locking nut.
8. Remove the damper/spring from the strut spring compressor.

Fig. 7: Removing Damper/Spring From Strut Spring Compressor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the rubber type damper hook (A) (if equipped).

Fig. 8: Identifying Rubber Type Damper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DAMPER/SPRING REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.

GETtheMANUALS.org

2. Rear Wheel
    1. Remove the rear wheel.

Fig. 9: Identifying Rear Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Knuckle - Jack Up
    1. Position a floor jack at the connecting point of the trailing arm (A) and the knuckle (B).
    2. Raise the floor jack until the suspension begins to compress.

Fig. 10: Identifying Trailing Arm And Knuckle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Damper Maintenance Cover
    1. Fold down the rear seat-back.

GETtheMANUALS.org

2. Pull up the rear damper maintenance cover (A) by hand to detach the hooks (B), then remove the rear damper maintenance cover.

Fig. 11: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Damper Upper Side
    1. Remove the flange nuts (A) from the top of damper.

Fig. 12: Identifying Flange Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Stabilizer Link Trailing Arm Side - Disconnection
    1. Remove the flange nut (A) while holding the respective joint pin (B) with a hex wrench (C).
    2. Disconnect the stabilizer link (D) from the trailing arm.

GETtheMANUALS.org

Fig. 13: Disconnecting Stabilizer Link From Trailing Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Brake Hose - Disconnection
    1. Remove the brake hose (A) from the brake hose mounting bracket (B).

Fig. 14: Identifying Brake Hose And Brake Hose Mounting Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Trailing Arm Front Side - Disconnection
    1. Remove the flange bolt (A), then remove the parking brake cable (B).
    2. Remove the trailing arm mounting bolts (C).

GETtheMANUALS.org

Fig. 15: Identifying Flange Bolt, Parking Brake Cable And Trailing Arm Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Rear Damper Lower Side - Disconnection
    1. Remove the damper mounting bolt (A).

NOTE: Install the damper mounting bolt to the same direction as removal.

Fig. 16: Identifying Damper Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

10. Rear Damper/Spring
    1. Lower the rear suspension, then remove the damper/spring (A) from the vehicle.

NOTE: Be careful not to damage the body.

Fig. 17: Removing Damper/Spring From Vehicle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Damper/Spring
    1. Position the damper/spring (A) between the body and the trailing arm.

NOTE: Be careful not to damage the body.

    2. Note the direction of the stepped part (B) of the lower spring seat on it is toward the inside of the vehicle.

Fig. 18: Positioning Damper/Spring Between Body And Trailing Arm

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Knuckle - Jack Up
    1. Position a floor jack at the connecting point of the trailing arm (A) and the knuckle (B).
    2. Raise the floor jack until the suspension begins to compress.

Fig. 19: Identifying Trailing Arm And Knuckle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Damper Lower Side - Reconnection
    1. Loosely install the new damper mounting bolt (A).

NOTE: Install the damper mounting bolt to the same direction as removal.

GETtheMANUALS.org

Fig. 20: Identifying Damper Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Trailing Arm Front Side - Reconnection
    1. Loosely install new trailing arm mounting bolts (A).
    2. Install the parking brake cable (B).

Fig. 21: Identifying Parking Brake Cable And Trailing Arm Mounting Bolts With Torque

Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Brake Hose - Reconnection
    1. Install the parking brake cable mounting bolt (A).

Fig. 22: Identifying Parking Brake Cable Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Stabilizer Link Trailing Arm Side - Reconnection
    1. Connect the stabilizer link (A) to the trailing arm.
    2. Install the new flange nut (B), and tighten them to the specified torque while holding the respective joint pin (C) with a hex wrench (D).

Fig. 23: Connecting Stabilizer Link To Trailing Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

7. Rear Damper Upper Side
    1. Loosely install new flange nuts (A) to the top of the damper.

Fig. 24: Identifying Rear Damper Flange Nuts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Rear Damper Lower Side - Tighten Under Vehicle's Weight
    1. Raise the rear suspension with the jack until the vehicle just lifts off of the safety stands.
    2. Tighten the damper mounting bolt and the flange nuts to the specified torque.
9. Rear Damper Maintenance Cover
    1. Fold down the rear seat-back.
    2. Install the rear damper maintenance cover (A). Make sure the hooks (B) snap into place securely.

Fig. 25: Identifying Rear Damper Maintenance Cover And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Rear Wheel
    1. Install the rear wheel.

GETtheMANUALS.org

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 26: Identifying Rear Wheel With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Pre-Alignment Checks

    For proper inspection and adjustment of the wheel alignment, do these checks:

    1. Release the parking brake to avoid an incorrect measurement.
    2. Make sure the suspension is not modified.
    3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
    4. Check the tire size and tire pressure according to tire information.
    5. Set the steering column to the middle tilt position and telescopic position.
12. Camber - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

    1. Check the camber angle.

       Camber angle:

       2WD:

       Front:

GETtheMANUALS.org

With 16 inch wheel: -0 ° 01 '±1 ° 00 '

Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

13. Rear Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Release the parking brake to avoid an incorrect measurement.
2. Check the toe.

Rear toe-in: 2^{+2}_{-1} mm ($0.08^{+0.08}_{-0.04}$ in)

GETtheMANUALS.org

- If adjustment is required, go to the rear toe adjustment.
- If no adjustment is required, go to front toe inspection.

14. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 27: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

NOTE: See the HDS Help menu for specific instructions.

16. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

NOTE: See the HDS Help menu for specific instructions.

REAR HUB BEARING UNIT REPLACEMENT

REMOVAL

GETtheMANUALS.org

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel
    1. Remove the rear wheel.

Fig. 28: Identifying Rear Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Driveshaft Spindle Nut
    1. Pry up the stake (A) on the spindle nut (B), then remove the nut.

Fig. 29: Identifying Stake And Spindle Nut With Dimensions
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Brake Caliper - Detach
    1. Remove the brake hose mounting bolt (A).

GETtheMANUALS.org

2. Remove the caliper assembly (B).

NOTE:

- **To prevent damage to the caliper assembly or brake hose, use a short piece of wire to hang the caliper assembly from the undercarriage.**
- **Do not twist the brake hose and the parking brake cable excessively.**

Fig. 30: Identifying Brake Hose Mounting Bolt And Caliper Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Brake Disc
   1. Remove the brake disc/drum flathead screws (A).
   2. Remove the brake disc/drum (B).

NOTE:

- **Remove the adjuster plug (C), then if necessary, turn the adjuster bolt (D) with a flat-tip screwdriver until the shoes become loose.**
- **If the brake disc/drum is stuck to the hub bearing unit, thread two 8 x 1.25 mm bolts (E) into the brake disc/drum to push it away from the hub bearing unit. Turn each bolt 90 degrees at a time to prevent the brake disc/drum from binding.**

GETtheMANUALS.org

11. Rear Wheel
    1. Install the rear wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 62: Identifying Rear Wheel With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Pre-Alignment Checks

    For proper inspection and adjustment of the wheel alignment, do these checks:

    1. Release the parking brake to avoid an incorrect measurement.
    2. Make sure the suspension is not modified.
    3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
    4. Check the tire size and tire pressure according to tire information.
    5. Set the steering column to the middle tilt position and telescopic position.
13. Camber - Inspection

    Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

    1. Check the camber angle.

GETtheMANUALS.org

Camber angle:

2WD:

Front:

With 16 inch wheel: -0 ° 01 '±1 ° 00 '

Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

14. Rear Toe - Inspection

Use commercially available computerized four wheel alignment equipment to measure wheel alignment

GETtheMANUALS.org

(caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

1. Release the parking brake to avoid an incorrect measurement.
2. Check the toe.

   Rear toe-in: 2^{+2}_{-1} mm ($0.08^{+0.08}_{-0.04}$ in)

   - If adjustment is required, go to the rear toe adjustment.
   - If no adjustment is required, go to front toe inspection.

15. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 63: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

17. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

INSTALLATION

1. Rear Stabilizer Bar

   Dual pump system

   1. Install the stabilizer bar (A).
   2. Install the bushing (B).

      NOTE:

      - **Note the direction of installation for the bushing.**
      - **Align the paint mark (C) on the stabilizer bar with the side of the bushing.**

   3. Install the bushing holder (D).

GETtheMANUALS.org

Fig. 68: Identifying Stabilizer Bar, Bushing Holders, Bushings With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Real time AWD system

1. Install the stabilizer bar (A).
2. Install the bushing (B).

NOTE:

- **Note the direction of installation for the bushing.**
- **Align the paint mark (C) on the stabilizer bar with the side of the bushing.**

3. Install the bushing holder (D).
4. Install the harness clip (E) to the bushing holder.

GETtheMANUALS.org

Fig. 69: Identifying Harness Clip, Bushing Holders, Bushing Holder, Paint Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Stabilizer Link Stabilizer Bar Side - Reconnection
    1. Connect both stabilizer link (A) to the stabilizer bar (B).
    2. Install the new self-locking nut (C) while holding the respective joint pin (D) with a hex wrench (E).

Fig. 70: Installing Self-Locking Nut Using Hex Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Wheel - Both Side
    1. Install both rear wheels.

NOTE: Before installing the wheel, clean the mating surfaces between the

GETtheMANUALS.org

brake disc/drum and the inside of the wheel.

Fig. 71: Identifying Rear Wheels
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Test Drive
    1. Test-drive the vehicle.
5. Rear Stabilizer Link - Tighten
    1. After 5 minutes of driving, torque the self-locking nut again to the specified torque.

REAR STABILIZER LINK REMOVAL AND INSTALLATION

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel
    1. Remove the rear wheel.

GETtheMANUALS.org

Fig. 72: Identifying Rear Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Stabilizer Link
    1. Remove the self-locking nut (A) and the flange nut (B) while holding the respective joint pin (C) with a hex wrench (D).
    2. Remove the stabilizer link (E).

Fig. 73: Identifying Self-Locking Nut Using Hex Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Stabilizer Link
    1. Install the stabilizer link (A).

        NOTE: The stabilizer link has a paint mark (B). Align the paint mark on the stabilizer link facing rearward.

    2. Install the new self-locking nut (C) and the new flange nut (D), and tighten them to the specified

GETtheMANUALS.org

torque while holding the respective joint pin (E) with a hex wrench (F).

Fig. 74: Installing Self-Locking Nut Using Hex Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Wheel
    1. Install the rear wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

Fig. 75: Identifying Rear Wheel With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Test Drive
    1. Test-drive the vehicle.

GETtheMANUALS.org

4. Rear Stabilizer Link - Tighten
    1. After 5 minutes of driving, torque the self-locking nut again to the specified torque.

REAR STRAKE REMOVAL AND INSTALLATION

REMOVAL

1. Rear Strake
    1. Remove the screws (A, B).

Fig. 76: Identifying Rear Strake Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the clip (A), then remove the rear strake (B).

GETtheMANUALS.org

Fig. 77: Identifying Rear Strake With Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Strake
    1. Install the rear strake (A), then install the clip (B).

GETtheMANUALS.org

Fig. 78: Identifying Rear Strake With Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the screws (A, B).

Fig. 79: Identifying Rear Strake With Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR TRAILING ARM REMOVAL AND INSTALLATION

GETtheMANUALS.org

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel
    1. Remove the rear wheel.

Fig. 80: Identifying Rear Wheel With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Knuckle - Jack Up
    1. Position a floor jack at the connecting point of the trailing arm (A) and the knuckle (B).
    2. Raise the floor jack until the suspension begins to compress.

Fig. 81: Identifying Trailing Arm And Knuckle

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Damper Lower Side - Disconnection
    1. Remove the damper mounting bolt (A).

NOTE: Install the damper mounting bolt to the same direction as removal.

Fig. 82: Identifying Damper Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Trailing Arm Knuckle Side - Disconnection
    1. Mark the cam positions of the adjusting bolt (A) with the frame.
    2. Mark the cam positions of the adjusting cam plate (B) with the frame.
    3. Remove the self-locking nut (C), the adjusting cam plate, and the adjusting bolt.
    4. Remove the flange bolt (D).
    5. Disconnect the knuckle from the trailing arm (E).

GETtheMANUALS.org

Fig. 83: Identifying Adjusting Bolt, Adjusting Cam Plate, Trailing Arm And Flange Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Stabilizer Link Trailing Arm Side - Disconnection
    1. Remove the flange nut (A) while holding the respective joint pin (B) with a hex wrench (C).
    2. Disconnect the stabilizer link (D) from the trailing arm.

Fig. 84: Removing Flange Nut Using Hex Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Trailing Arm
    1. Remove the trailing arm front mounting bolts (A).

GETtheMANUALS.org

Fig. 85: Identifying Trailing Arm Front Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the trailing arm rear mounting bolt (A).
3. Lower the jack, and remove the trailing arm (B).

Fig. 86: Identifying Trailing Arm Rear Mounting Bolt And Trailing Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Trailing Arm
    1. Install the trailing arm (A).
    2. Loosely install the new trailing arm rear mounting bolt (B).

GETtheMANUALS.org

Fig. 87: Identifying Trailing Arm Rear Mounting Bolt And Trailing Arm With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Loosely install the new trailing arm front mounting bolt (A).

Fig. 88: Identifying Trailing Arm Front Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Stabilizer Link Trailing Arm Side - Reconnection
    1. Connect the stabilizer link (A) to the trailing arm.
    2. Install the new flange nut (B), and tighten them to the specified torque while holding the respective joint pin (C) with a hex wrench (D).

GETtheMANUALS.org

Fig. 89: Tightening Flange Nut Using Hex Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Trailing Arm Knuckle Side - Reconnection
    1. Connect the knuckle to the trailing arm.
    2. Loosely install the new flange bolt (A).
    3. Loosely install the new self-locking nut (B), the adjusting cam plate (C), and the new adjusting bolt (D).

NOTE: **Align the cam positions of the adjusting bolt and the adjusting cam plate with the marked positions when tightening the self-locking nut.**

Fig. 90: Identifying Self-Locking Nut, Adjusting Cam Plate And Adjusting Bolt With Torque

GETtheMANUALS.org

Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Damper Lower Side - Reconnection
    1. Loosely install the new damper mounting bolt (A).

NOTE: **Install the damper mounting bolt to the same direction as removal.**

Fig. 91: Identifying Damper Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Suspension All Mounting - Tighten Under Vehicle's Weight
    1. Raise the rear suspension with a floor jack to load the vehicle weight.
    2. Tighten all mounting hardware to the specified torque.
6. Rear Wheel
    1. Install the rear wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

GETtheMANUALS.org

Fig. 92: Identifying Rear Wheel With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Pre-Alignment Checks

   For proper inspection and adjustment of the wheel alignment, do these checks:

   1. Release the parking brake to avoid an incorrect measurement.
   2. Make sure the suspension is not modified.
   3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
   4. Check the tire size and tire pressure according to tire information.
   5. Set the steering column to the middle tilt position and telescopic position.
8. Camber - Inspection

   Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

   1. Check the camber angle.

      Camber angle:

      2WD:

      Front:

      With 16 inch wheel: -0 ° 01 '±1 ° 00 '

      Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

GETtheMANUALS.org

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

9. Rear Toe - Inspection

   Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

   1. Release the parking brake to avoid an incorrect measurement.
   2. Check the toe.

      Rear toe-in: 2^{+2}_{-1} mm ($0.08^{+0.08}_{-0.04}$ in)

      - If adjustment is required, go to the rear toe adjustment.
      - If no adjustment is required, go to front toe inspection.

GETtheMANUALS.org

10. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 93: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

12. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

13. Test Drive
    1. Test-drive the vehicle.
14. Rear Stabilizer Link - Tighten
    1. After 5 minutes of driving, torque the self-locking nut again to the specified torque.

REAR UPPER ARM REMOVAL AND INSTALLATION

GETtheMANUALS.org

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel
    1. Remove the rear wheel.

Fig. 94: Identifying Rear Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Knuckle - Jack Up
    1. Position a floor jack at the connecting point of the trailing arm (A) and the knuckle (B).
    2. Raise the floor jack until the suspension begins to compress.

Fig. 95: Identifying Trailing Arm And Knuckle

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Upper Arm
    1. Remove the wheel speed sensor harness bracket (A).

Fig. 96: Identifying Wheel Speed Sensor Harness Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the flange bolts (A), and remove the upper arm (B).

Fig. 97: Identifying Flange Bolts And Upper Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Upper Arm
    1. Install the upper arm (A).

GETtheMANUALS.org

Fig. 98: Identifying Rear Upper Arm And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the wheel speed sensor harness bracket (A).

Fig. 99: Identifying Wheel Speed Sensor Harness Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear Suspension All Mounting - Tighten Under Vehicle's Weight
    1. Raise the rear suspension with a floor jack to load the vehicle weight.
    2. Tighten all mounting hardware to the specified torque.
3. Rear Wheel
    1. Install the rear wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

GETtheMANUALS.org

Fig. 100: Identifying Rear Wheel With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pre-Alignment Checks

   For proper inspection and adjustment of the wheel alignment, do these checks:

   1. Release the parking brake to avoid an incorrect measurement.
   2. Make sure the suspension is not modified.
   3. Make sure the fuel tank is full, and that the spare tire, the jack, and the tools are in place on the vehicle.
   4. Check the tire size and tire pressure according to tire information.
   5. Set the steering column to the middle tilt position and telescopic position.
5. Camber - Inspection

   Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

   1. Check the camber angle.

      Camber angle:

      2WD:

      Front:

      With 16 inch wheel: -0 ° 01 '±1 ° 00 '

      Without 16 inch wheel: -0 ° 10 '±1 ° 00 '

GETtheMANUALS.org

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -1 ° 06 '±45 '

Without 16 inch wheel: -1 ° 12 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

AWD/4WD:

Front:

With 16 inch wheel: -0 ° 08 '±1 ° 00 '

Without 16 inch wheel: 0 ° 00 '±1 ° 00 '

(Maximum difference between the front right and left side: 1 °00 ')

Rear:

With 16 inch wheel: -0 ° 50 '±45 '

Without 16 inch wheel: -1 ° 00 '±45 '

(Maximum difference between the front right and left side: 0 °45 ')

- If the measurement is within specification, measure the toe-in.
- If the measurement for the front camber is not within the specification, go to front camber adjustment.
- If the measurement for the rear camber is not within the specification, check for bent or damaged suspension components.

6. Rear Toe - Inspection

   Use commercially available computerized four wheel alignment equipment to measure wheel alignment (caster, camber, toe, and turning angle). Follow the equipment manufacturer's instructions.

   1. Release the parking brake to avoid an incorrect measurement.
   2. Check the toe.

      Rear toe-in: 2^{+2}_{-1} mm ($0.08^{+0.08}_{-0.04}$ in)

      - If adjustment is required, go to the rear toe adjustment.
      - If no adjustment is required, go to front toe inspection.

GETtheMANUALS.org

7. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 101: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. VSA Sensor Neutral Position - Memorization
    1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
    2. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

    NOTE: See the HDS Help menu for specific instructions.

9. Steering Angle Sensor Neutral Position - Clear
    1. Select EPS ADJUSTMENT, then select EPS STEERING ANGLE SENSOR VALUE CLEAR and follow the screen prompts on the HDS.

    NOTE: See the HDS Help menu for specific instructions.

REAR WHEEL BOLT REMOVAL AND INSTALLATION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number

GETtheMANUALS.org

	Ball Joint Remover, 28 mm 07MAC-SL00202

REMOVAL

1. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
2. Rear Wheel
    1. Remove the rear wheel.

Fig. 102: Identifying Rear Wheel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Brake Caliper - Detach
    1. Remove the brake hose mounting bolt (A).
    2. Remove the caliper assembly (B).

GETtheMANUALS.org

NOTE:

- **To prevent damage to the caliper assembly or brake hose, use a short piece of wire to hang the caliper assembly from the undercarriage.**
- **Do not twist the brake hose and the parking brake cable excessively.**

Fig. 103: Identifying Brake Hose Mounting Bolt And Caliper Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Brake Disc
    1. Remove the brake disc/drum flathead screws (A).
    2. Remove the brake disc/drum (B).

NOTE:

- **Remove the adjuster plug (C), then if necessary, turn the adjuster bolt (D) with a flat-tip screwdriver until the shoes become loose.**
- **If the brake disc/drum is stuck to the hub bearing unit, thread two 8 x 1.25 mm bolts (E) into the brake disc/drum to push it away from the hub bearing unit. Turn each bolt 90 degrees at a time to prevent the brake disc/drum from binding.**

GETtheMANUALS.org

Fig. 104: Removing Brake Disc/Drum Flathead Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Wheel Bolt

NOTE:

- **Do not use a hammer or impact tools (pneumatic or electric).**
- **Be careful not to damage the threads of the wheel bolts.**

1. Separate the wheel bolt (A) from the hub (B).

NOTE: **If the angle of the remover against the wheel bolt is not vertical, readjust the ball joint remover by turning the head (C) of the adjusting bolt (D).**

GETtheMANUALS.org

Fig. 105: Separating Wheel Bolt From Hub
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rear Wheel Bolt

NOTE:

- **Do not use a hammer or impact tools (pneumatic or electric).**
- **Be careful not to damage the threads of the wheel bolts.**

1. Insert the new wheel bolt (A) into the hub (B).

NOTE:

Fig. 106: Installing Rear Wheel Bolt To Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- **Before installing the new wheel bolt, clean the mating surfaces on the bolt and the hub.**
- **Degrease the area around the wheel bolt and the threaded section of the nut.**

GETtheMANUALS.org

2. Adjust the measurement (C) with the washers (P/N 94101-12800 or equivalent) (D).
3. Install a nut (P/N 90304-SC2-000 or equivalent) (E) hand-tight.

NOTE:

- **Make sure the wheel bolt is installed vertically to the hub disc surface.**
- **Do not install the nut and the washers that have been used as tools on a vehicle.**

4. Tighten the nut.

NOTE:

- **Do not exceed the maximum torque limit.**
- **Make sure there is no gap (F) between the bolt and the hub.**

Limited torque: 108 N.m (11.0 kgf.m, 80 lbf.ft) max .

NOTE: **If you cannot tighten the wheel nut to the specified torque when installing the wheel, replace the rear hub bearing unit as an assembly.**

2. Rear Brake Disc
   1. Install the brake disc (A).

NOTE: **Before installing the brake disc, clean the mating surfaces between the hub bearing unit and the inside of the brake disc.**

Fig. 107: Identifying Rear Brake Disc And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Brake Caliper - Reattach

GETtheMANUALS.org

1. Install the caliper assembly (A).
2. Install the brake hose mounting bolt (B).

Fig. 108: Identifying Caliper Assembly And Brake Hose Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Wheel
    1. Install the rear wheel.

NOTE: **Before installing the wheel, clean the mating surfaces between the brake disc/drum and the inside of the wheel.**

GETtheMANUALS.org

Fig. 109: Identifying Rear Wheel With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

REAR WINDOW DEFOGGER COMPONENT LOCATION INDEX

Fig. 1: Rear Window Defogger Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR WINDOW DEFOGGER	**DEFOGGER WIRE REPAIR**
	FUNCTION TEST
REAR WINDOW DEFOGGER RELAY (4P)	**TEST**

REAR WINDOW DEFOGGER WIRE REPAIR

RECONDITIONING

GETtheMANUALS.org

1. Defogger Wire - Repair

NOTE: **To make an effective repair, the broken section must be no longer than 25 mm (1.0 in).**

1. Lightly rub the area around the broken section (A) with fine steel wool, then clean it with isopropyl alcohol.
2. Carefully mask above and below the broken area of the rear window defogger wire (B) with cellophane tape (C).

Fig. 2: Identifying Defogger Wire Broken Section And Cellophane Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Using a small brush, apply a heavy coat of silver conductive paint (commercially available) (A) extending about 3.0 mm (0.12 in) on both sides of the break. Allow 25 minutes to dry.
4. Do the function test to confirm that the wire is repaired.
5. Apply a second coat of paint in the same way. Let it dry 3 hours before removing the tape.

Fig. 3: Applying Heavy Coat Of Silver Conductive Paint Using Small Brush
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR WINDOW DEFOGGER FUNCTION TEST

NOTE:

- **Before testing, make sure the No. A2-6 (30 A) fuse in the under-hood fuse/relay box, and the No. B22 (7.5 A) fuse in the under-dash fuse/relay**

GETtheMANUALS.org

box are OK.

- **Aftermarket window tinting should be removed before testing.**
- **With the defogger ON, holding a cup of hot water to the rear window will form steam that can assist in diagnosing a broken or under-performing grid line or section.**
- **Be careful not to scratch or damage the defogger wires with the tester probe. To avoid damaging the defogger grid, wrap a single strand of bare copper wire or aluminum foil around the voltmeter probe. Use the foil or wire as a contact brush when moving across the defogger grid.**

Fig. 4: Testing Rear Window Defogger Function Using Tester Probe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Turn the ignition switch to ON (II), then turn the rear window defogger switch ON.
2. Measure the voltage between the rear window defogger A (1P) positive terminal and body ground. There should be battery voltage.
   - If there is no voltage, check for:
     - Faulty rear window defogger relay.
     - Faulty climate control unit or HVAC control unit.
     - An open or high resistance in the GRN wire to the positive terminal.
   - If there is battery voltage, go to step 3.

Fig. 5: Identifying Rear Window Defogger Positive And Negative Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

3. Measure the voltage between the rear window defogger B (1P) negative terminal and body ground. There should be less than 0.2 V.

   If there is more than 0.2 V, check for an open in the ground (BLK) wire or poor ground (G603). If there is 0.2 V or less, go to step 4.

4. Touch the voltmeter positive probe along each defogger wire, and the negative probe to the negative terminal.
   - If the voltage is as specified, the defogger wire up to that point is OK.
   - If the voltage is not as specified, repair the defogger wire.
     - If voltage is more than specified at one of the points, there is a break or high resistance toward the negative half of the wire.
     - If voltage is less than specified at one of the points, there is a break or high resistance toward the positive half of the wire.

(1) The shielded wires have a heat-shrink tube insulating the outside of the wire. The color of the insulating tube, typically black or dark gray, may not match the color of the wire shown on the circuit diagram.					

REARVIEW CAMERA REMOVAL AND INSTALLATION

REMOVAL

1. Tailgate Upper Trim Panel
    1. Carefully pry out the notch (A) in the tailgate upper trim (B) with the appropriate trim tool to detach the hooks (C) and the tabs (D) from the tailgate side trims (E), and pull back the tailgate upper trim panel by hand to detach the clips (F), then remove the tailgate upper trim panel.

GETtheMANUALS.org

Fig. 5: Identifying Upper Trim Panel Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Tailgate Side Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Detach the hook (A) and the tabs (B) from the tailgate lower trim panel (C), and pull back the tailgate side trim (D) by hand to detach the clips (E), then remove the tailgate side trim.

Fig. 6: Identifying Tailgate Side Trim Fastener
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tailgate Lower Trim Panel
   1. Remove the screw (A), then remove the tailgate pull pocket (B).

GETtheMANUALS.org

Fig. 7: Identifying Tailgate Pull Pocket And Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pull out the tailgate lower trim panel (A) by hand to detach the clips (B, C), then remove the tailgate lower trim panel.

Fig. 8: Identifying Tailgate Lower Trim Panel Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear License Trim
    1. Remove the bolts (A).

GETtheMANUALS.org

Fig. 9: Identifying Rear License Trim Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Spray soapy water solution onto the double-sided adhesive tape (A), then carefully cut the adhesive tape along the lower edge of the rear license trim (B) with a utility knife while separating the trim from the tailgate (C) with a trim tool.

NOTE: Apply protective tape (D) around the cutting area as shown.

Fig. 10: Applying Protective Tape Upon Cutting Area
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull out the rear license trim (A) with the appropriate trim tool to release the clip pins (B) of the clips (C) from the clip grommets (D) on the tailgate, and detach the clips (E), then remove the rear license trim from the tailgate.

GETtheMANUALS.org

NOTE: **The clip grommets will stay on the tailgate.**

Fig. 11: Identifying Rear License Trim Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the clip grommets (A) from the tailgate.
5. Install the clip grommets into the clip pins on the rear license trim.

NOTE: **If the clip pins and the clip grommets are damaged or stress-whitened, replace them as an assembly with new ones.**

Fig. 12: Identifying Tailgate Clip Grommets

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rearview Camera
    1. Disconnect the connector, then push the tab (A).

Fig. 13: Identifying Rearview Camera Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the rearview camera (A).

Fig. 14: Removing Rearview Camera
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Rearview Camera
    1. Install the rearview camera (A).

GETtheMANUALS.org

Fig. 15: Installing Rearview Camera
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the connector.

Fig. 16: Identifying Rearview Camera Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Rear License Trim
    1. If you are reusing the original rear license trim (A), apply PP primer to the areas where new double-sided adhesive tapes (B, C) will be applied, then attach the new double-sided adhesive tapes to the trim as shown.

       Adhesive tape (B): Thickness 3 mm (0.12 in)

       Width 4 mm (0.16 in)

GETtheMANUALS.org

Length 255 mm (10.04 in)

Adhesive tape (C): Thickness 2 mm (0.08 in)

Width 5 mm (0.20 in)

Length 177 mm (6.97 in)

Fig. 17: Identifying Rear License Trim With Adhesive Tapes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Fold the edge of each adhesive backing from the double-sided adhesive tape.
3. Hold up the rear license trim (A), and fit the clips (B, C) into the holes in the tailgate. Push on the trim until the clips snap into place securely.

Fig. 18: Identifying Rear License Trim Fastener
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

4. Install the bolts (A).

Fig. 19: Identifying Rear License Trim Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Tailgate Lower Trim Panel
    1. Hold up the tailgate lower trim panel (A), and fit the clips into the holes in the tailgate.
    2. Push on the trim until the clips (B, C) securely snap into place.

Fig. 20: Identifying Rear License Trim Fastener And Clip

FRONT SEAT BELT BUCKLE REMOVAL AND INSTALLATION

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Front Seat Belt Lower Anchor Bolt
    1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 1: Pulling Front Seat Belt Lower Anchor Bolt Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the lower anchor bolt (A).

GETtheMANUALS.org

Fig. 2: Removing Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 3: Identifying Battery Negative And Positive Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 4: Pulling Out Head Restraint

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat Assembly
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

<u>Fig. 5: Removing Rear Inner And Outer Seat Track End Cover</u>
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the seat mounting bolts (A) from the front side of the front seat.

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Front Seat Belt Buckle
    1. Assemble the washers and the collar on the anchor bolt as shown.

NOTE:

- **Apply medium strength liquid thread lock to the anchor bolt before reinstallation.**
- **Tighten the bolts by hand first, then tighten to the specified torque.**

Fig. 17: Identifying Washers And Collar On Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the seat belt buckle (A), then install the bolt.
3. Install the harness clip(s) (B).

Driver's seat

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
    1. Insert the head restraint (A) to the seat-back as shown.

Fig. 30: Inserting Head Restraint To Seat-Back
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Battery Terminal (SRS) - Reconnection

GETtheMANUALS.org

NOTE: **If the battery performance is abnormal, test the battery.**

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

   NOTE: **Always connect the positive side first.**

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 31: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat Belt Lower Anchor Bolt
   1. Install the lower anchor bolt.

      NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Push in the center pin (A), then remove the trunk hook (B).

Fig. 75: Identifying Center Pin And Trunk Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the bolt (A), then remove the tie-down hook (B).

GETtheMANUALS.org

Fig. 76: Identifying Tie-Down Hook And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the clips (A, B).
6. Detach the hooks (C) and the tabs (D) from the quarter pillar trim (E), and pull out the rear side trim panel (F) by hand to detach the clips (G, H).

Fig. 77: Identifying Quarter Pillar Trim, Rear Side Trim Panel, Hooks And Tabs

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the rear seat release lever (A) from the rear side trim panel (B).

Fig. 78: Identifying Rear Seat Release Lever And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Detach the rear seat release cable (A) from the clips of the rear side trim panel (B), then remove the rear side trim panel.

Fig. 79: Identifying Rear Seat Release Cable And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Rear Seat Belt Lower Anchor Bolt
    1. Remove the rear seat belt lower anchor bolt (A).

GETtheMANUALS.org

Fig. 80: Identifying Rear Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Quarter Pillar Trim
    1. Pull out the quarter pillar trim (A) by hand to detach the clips (B, C, and D).
    2. Pass the rear seat belt lower anchor (E) out through the hole in the quarter pillar trim, then remove the quarter pillar trim.

Fig. 81: Identifying Quarter Pillar Trim And Rear Seat Belt Lower Anchor With Fastener
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

13. Rear Seat Belt Assembly
    1. Remove the bolt securing the rear seat belt upper anchor (A).

Fig. 82: Identifying Rear Seat Belt Upper Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the retractor mounting bolt (A) and the retractor bolt (B), then remove the rear seat belt assembly (C).
    3. If necessary, remove the retractor protector (D).

Fig. 83: Identifying Retractor Mounting Bolt, Rear Seat Belt Assembly And Retractor Protector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

GETtheMANUALS.org

1. Rear Seat Belt Assembly
    1. Install the retractor protector (A).
    2. Install the rear seat belt assembly (B), then install the retractor mounting bolt (C) and the retractor bolt (D),

Fig. 84: Identifying Retractor Mounting Bolt, Rear Seat Belt Assembly And Retractor Protector With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Assemble the washer, the collar, and the bushing on the upper anchor bolt as shown.

NOTE: **Apply medium strength liquid thread lock to the upper anchor bolt before installation.**

Fig. 85: Identifying Washer, Collar, Bushing And Upper Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

4. Install the rear seat belt upper anchor bolt (A).

Fig. 86: Identifying Rear Seat Belt Upper Anchor Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Quarter Pillar Trim
   1. Install a new clip (A) to the quarter pillar trim (B).

Fig. 87: Installing Clip To Quarter Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   2. Pass the rear seat belt lower anchor (A) through the hole in the quarter pillar trim (B).
   3. Fit the clips into the holes in the quarter pillar.
   4. Lightly push the quarter pillar trim into place, then install the trim.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips**

GETtheMANUALS.org

or the ribs.

- **Do not push too hard on the quarter pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the quarter pillar trim to verify that all clips are securely fastened.**
- **Make sure the clips (C, D, and E) snap into place securely.**

Fig. 88: Identifying Rear Seat Belt Lower Anchor And Quarter Pillar Trim With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Rear Seat Belt Lower Anchor Bolt
    1. Install the rear seat belt lower anchor bolt (A).

NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

GETtheMANUALS.org

Fig. 89: Identifying Rear Seat Belt Lower Anchor Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rear Side Trim Panel
    1. Install the rear seat release cable (A) to the clips (B) of the rear side trim panel (C).

NOTE: Align the marks (D) with the clips as shown.

Fig. 90: Identifying Rear Side Trim Panel, Rear Seat Release Cable, Clip And Marks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. Install the rear seat release lever (A) to the rear side trim panel (B).

Fig. 91: Identifying Rear Seat Release Lever And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the rear side trim panel (A). Make sure the hooks (B), the tabs (C), and the clips (D, E) snap into place securely.
4. Install the clips (F, G).

Fig. 92: Identifying Rear Side Trim Panel, Hooks And Tabs

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the tie-down hook (A), then install the bolt (B).

Fig. 93: Identifying Tie-Down Hook And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the trunk hook (A).

Fig. 94: Identifying Trunk Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the screws (A), then install the rear seat release lever cap (B). Make sure the upper hook (C) and the lower hooks (D) snap into place securely.

GETtheMANUALS.org

Fig. 95: Identifying Rear Seat Release Lever Cap, Hook And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Trim Panel
    1. Install the rear trim panel (A). Make sure the clips (B, C), the hooks (D), and the tabs (E) snap into place securely.
    2. Install the clips (F).

Fig. 96: Installing Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

6. Tailgate Weatherstrip As Needed
    1. Locate the alignment mark (A) of the tailgate weatherstrip (B). Align the alignment mark (C) with the center of the lower area on the tailgate opening, then install the tailgate weatherstrip all the way around.

Fig. 97: Identifying Tailgate Weatherstrip With Alignment Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Rear Carpet Trim
    1. Install the rear carpet trim (A). Make sure the clips (B) and the hooks (C) snap into place securely.

Left side

REAR SEAT BELT REMOVAL AND INSTALLATION - CENTER

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Push Pin/Grab Rail Cap Pliers 07AAC-001A100

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

GETtheMANUALS.org

Fig. 109: Identifying Battery Negative And Positive Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Sill Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Detach the hooks (A) and the tabs (B) from the kick panel (C) and the B-pillar lower trim (D), and pull up the front door inner sill trim (E) by hand to detach the clips (F), then remove the trim.

Fig. 110: Pulling Up Front Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

3. Front Door Opening Seal As Needed - Both Sides

NOTE: Repeat on the opposite side.

1. Pull out the front door opening seal (A) from the trim hooks (B) around the front door opening flange, then detach the seal as needed.

Fig. 111: Identifying Front Door Opening Seal, Trim Hooks And Front Door Opening Flange
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the A-pillar trim (A) by hand to release the clips (B, C).

GETtheMANUALS.org

Fig. 112: Pulling Out A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Put a shop towel (A) in the opening between the A-pillar trim (B) and the dashboard to prevent dropping the A-pillar clips.

Fig. 113: Putting Shop Towel Between A-Pillar Trim And Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull out and up on the A-pillar trim (A) to release it from the dashboard.

NOTE: The upper clip will stay in the body.

GETtheMANUALS.org

Fig. 114: Pulling Out A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the upper clip (A) from the body.

Fig. 115: Removing Upper Clip From Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
2. Detach the hooks (A) and the tab (B) from the B-pillar lower trim (C) and the rear side trim panel (D), and pull up the rear door inner sill trim (E) by hand to detach the clips (F, G), then remove the trim.

GETtheMANUALS.org

Fig. 116: Identifying Rear Door Sill Trim With Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Rear Door Opening Seal As Needed - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the rear door opening seal (A) from the trim hooks (B) around the rear door opening flange, then detach the seal as needed.

Fig. 117: Identifying Rear Door Opening Seal And Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. B-Pillar Lower Trim - Both Sides

GETtheMANUALS.org

NOTE: **Repeat this procedure on the opposite side.**

1. Slide the front seat forward fully.
2. Pull back the bottom portion of the B-pillar lower trim (A) by hand to detach the clips (B).
3. Pull back the upper portion of the B-pillar lower trim to detach the upper hooks (C), then remove the B-pillar lower trim.

Fig. 118: Removing B-Pillar Lower Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Front Seat Belt Upper Anchor Bolt - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Remove the front seat belt shoulder anchor adjuster cap (A), then remove the front seat belt upper anchor bolt.

GETtheMANUALS.org

Fig. 119: Identifying Front Seat Belt Shoulder Anchor Adjuster Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. B-Pillar Upper Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull back the bottom portion of the B-pillar upper trim (A) by hand to detach the hooks (B). Pull down the trim to release the upper hook (C) from the hole (D) in the body, then remove the B-pillar upper trim.

Fig. 120: Removing B-Pillar Upper Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Tonneau Cover (For Some Models)
    1. Remove the tonneau cover (A).

GETtheMANUALS.org

Fig. 121: Removing Tonneau Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Cargo Floor Cover
    1. Remove the cargo floor cover (A).

Fig. 122: Removing Cargo Floor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Tailgate Weatherstrip As Needed
    1. Detach the tailgate weatherstrip (A) as needed.

GETtheMANUALS.org

Fig. 123: Identifying Tailgate Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Rear Trim Panel
    1. Remove the clips (A).
    2. Detach the hooks (B) and the tabs (C) from the rear side trim panels (D), and pull up the rear trim panel (E) by hand to detach the clips (F, G), then remove the rear trim panel.

Fig. 124: Removing Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Rear Damper Maintenance Cover - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

GETtheMANUALS.org

1. Fold down the rear seat-back.
2. Pull up the rear damper maintenance cover (A) by hand to detach the hooks (B), then remove the rear damper maintenance cover.

Fig. 125: Identifying Rear Damper Maintenance Cover And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Rear Carpet Trim - Both Sides
    1. Detach the clips (A), then tuck up the rear seat-back cover (B).

Left side

Fig. 126: Removing Rear Seat-Back Cover (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right side

GETtheMANUALS.org

Fig. 127: Removing Rear Seat-Back Cover (Right Side)

17. Rear Seat Belt Lower Anchor Bolt - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Remove the rear seat belt lower anchor bolt (A).

GETtheMANUALS.org

Fig. 132: Identifying Rear Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Rear Side Trim Panel - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Carefully pry out on the upper hook (A) in the rear seat release lever cap (B) with the appropriate trim tool, then pull back the rear seat release lever cap to remove it.
2. Remove the screws (C).

GETtheMANUALS.org

Fig. 133: Removing Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Push in the center pin (A), then remove the trunk hook (B).

Fig. 134: Identifying Center Pin And Trunk Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the bolt (A), then remove the tie-down hook (B).

GETtheMANUALS.org

Fig. 135: Identifying Tie-Down Hook And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Detach the clips (A, B).
6. Detach the hooks (C) and the tabs (D) from the quarter pillar trim (E), and pull out the rear side trim panel (F) by hand to detach the clips (G, H).

Fig. 136: Identifying Rear Seat Release Lever And Rear Side Trim Panel

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the rear seat release lever (A) from the rear side trim panel (B).

Fig. 137: Identifying Rear Seat Release Lever And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Detach the rear seat release cable (A) from the clips of the rear side trim panel (B), then remove the rear side trim panel.

Fig. 138: Identifying Rear Seat Release Cable And Rear Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Quarter Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull out the quarter pillar trim (A) by hand to detach the clips (B, C, and D).
2. Pass the rear seat belt lower anchor (E) out through the hole in the quarter pillar trim, then remove the quarter pillar trim.

GETtheMANUALS.org

Fig. 139: Identifying Quarter Pillar Trim And Rear Seat Belt Lower Anchor With Fastener
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Roof Console Assembly
    1. Remove the lenses (A), then remove the screws (B).
    2. Open the console, then remove the screws (C).
    3. Disconnect the connectors (D), then remove the roof console assembly (E).

GETtheMANUALS.org

Fig. 140: Identifying Lenses, Screws, Connectors And Roof Console Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Ceiling Light (without RES)
    1. Turn the ceiling light switch OFF.
    2. Carefully pry off the lens (A).
    3. Remove the bulb.
    4. Remove the ceiling light (B).
    5. Disconnect the connector.

GETtheMANUALS.org

Fig. 141: Identifying Ceiling Light And Lens
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Rear Display Cover (With RES)
    1. Turn the ceiling light switch OFF.
    2. Carefully pry off the lenses (A) with a flat-tip screwdriver.
    3. Remove the ceiling light (B).
    4. Disconnect the connector.

GETtheMANUALS.org

Fig. 142: Identifying Ceiling Light And Lens
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the rear display cover (A).

GETtheMANUALS.org

Fig. 143: Identifying Rear Display Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Rear Controller and Screen (With RES)
    1. Disconnect the connector.
    2. Remove the rear controller and screen (A).

Fig. 144: Identifying Rear Controller And Screen (With RES)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

24. Cargo Area Light
    1. Turn the cargo area light switch OFF.
    2. Carefully pry off the lens (A).
    3. Remove the bulb.
    4. Remove the cargo area light (B).
    5. Disconnect the connector.

Fig. 145: Identifying Cargo Area Light And Lens
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Grab Handles for One Vehicle
    1. Lower the grab handle (A).
    2. Insert the tips of the push pin/grab rail cap pliers (B) into the notch.

Fig. 146: Inserting Tips Of Push Pin/Grab Rail Cap Pliers Into Notch

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Gently squeeze the handles of the push pin/grab rail cap pliers (A), and pull the cap (B) straight out.

Fig. 147: Squeezing Handles Of Push Pin/Grab Rail Cap Pliers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the grab handle (A).

Fig. 148: Identifying Grab Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the clips (A).

GETtheMANUALS.org

Fig. 149: Removing Grab Handles Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Sunvisor - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Push the tab (A) with a flat-tip screwdriver through the hole in the front side of the bracket cover (B).

NOTE: Make sure the tab is unlocked.

Fig. 150: Pushing Tab Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While pushing in the tab (A) with a flat-tip screwdriver, release the sunvisor (B) from the holder (C), and rotate the sunvisor backward 45 °.

NOTE: Make sure the tab slides into the bracket cover as you rotate the sunvisor.

GETtheMANUALS.org

Fig. 151: Removing Sunvisor From Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connector (A), then remove the sunvisor (B).

NOTE: **If the sunvisor cannot be removed, the tab has not rotated into the bracket cover. Repeat step 2 to rotate the tab.**

Fig. 152: Identifying Sunvisor And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Sunvisor Holder - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Turn the sunvisor holder (A) 45 ° counterclockwise, then remove it from the holder grommet (B).

GETtheMANUALS.org

Fig. 153: Removing Sunvisor Holder From Holder Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the holder grommet (A).

Fig. 154: Identifying Holder Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Headliner
    1. Without moonroof: Disconnect the connector (A), and detach the harness clips (B) from the driver's side A-pillar.

GETtheMANUALS.org

Fig. 155: Identifying Headliner Connector And Harness Clips (Driver Side A-Pillar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the connectors (A), and detach the harness clips (B) from the passenger's side A-pillar.

Fig. 156: Identifying Headliner Connector And Harness Clips (Passenger Side A-Pillar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the connectors (A), and detach the connector clips (B) and the harness clip (C) from the right quarter pillar.

GETtheMANUALS.org

Fig. 157: Identifying Headliner Connector And Harness Clips (Right Quarter Pillar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Slide the front seats all the way back, and recline the seat-back fully.
5. Fold down the rear seats.
6. Detach the clips (A) and release the fasteners (B) from the headliner (C) by pulling it down.
7. With the help of an assistant, lower the headliner.

Without moonroof

Fig. 158: Identifying Headliner, Fasteners And Clips (Without Moonroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With moonroof

GETtheMANUALS.org

Fig. 159: Identifying Headliner, Fasteners And Clips (With Moonroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. With the help of an assistant, remove the headliner (A) through the tailgate opening.

NOTE: **Do not bend the headliner. Bending the headliner will crease and damage it.**

Fig. 160: Identifying Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Rear Seat Belt Assembly - Center
    1. Remove the retractor mounting bolt (A) and the retractor bolt (B), then remove the rear seat belt assembly (C).

GETtheMANUALS.org

Fig. 161: Identifying Retractor Mounting Bolt, Rear Seat Belt Assembly And Retractor Protector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Rear Seat Belt Assembly - Center
    1. Install the rear seat belt assembly (A), then install the retractor mounting bolt (B) and the retractor bolt (C).

GETtheMANUALS.org

Fig. 162: Identifying Retractor Mounting Bolt, Rear Seat Belt Assembly And Retractor Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Headliner - Check
    1. If the side curtain airbag has deployed, replace the headliner and removed trim pieces, along with the other parts listed for side curtain airbag deployment.
    2. To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the headliner and all removed trim. Replace any pieces with the following damage:
        - Any creases or tears in the headliner (A)
        - Any damages around the grab handle holes (B) or the sunvisor holes (C) in the headliner
        - Any clip bases (D) which have come off the headliner
        - Any fasteners (E) or clip bases (F) which have come off the headliner

GETtheMANUALS.org

Fig. 163: Identifying Headliner, Fasteners, Clip Bases, Handle And Sunvisor Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Headliner
    1. With the help of an assistant, slide the headliner (A) through the tailgate opening.

NOTE: **Do not bend the headliner. Bending the headliner will crease and damage it.**

Fig. 164: Identifying Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. With the help of an assistant, install the headliner (A), then push on the clips (B) and the fasteners (C) which will snap into place securely.

Without moonroof

Fig. 165: Identifying Headliner, Fasteners And Clips (Without Moonroof)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With moonroof

Fig. 166: Identifying Headliner, Fasteners And Clips (With Moonroof)

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. At the right quarter pillar, connect the connectors (A), and install the connector clips (B) and the harness clip (C).

Fig. 167: Identifying Connectors, Connector Clips And Harness Clip (Right Quarter Pillar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. At the passenger's A-pillar, connect the connectors (A), and install the harness clips (B).

Fig. 168: Identifying Connectors, Connector Clips And Harness Clip (Passenger A-Pillar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Without moonroof: At the driver's A-pillar, connect the connector (A), and install the harness clips (B).

GETtheMANUALS.org

Fig. 169: Identifying Connectors, Connector Clips And Harness Clip (Driver A-Pillar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Sunvisor Holder
    1. Install the holder (A) into the holder grommet (B) by turning it 45 ° clockwise.
    2. Install the holder and the holder grommet as an assembly into the body by pushing it until the hooks snap into place securely.

Fig. 170: Identifying Holder And Holder Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Sunvisor - Check
    1. If the side curtain airbag has deployed, replace the sunvisor, along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, inspect the sunvisor for damage. A damaged sunvisor may cause the side curtain airbags to deploy improperly, possibly causing injury. Replace the sunvisor if it has any of the following damage:
        - Any cracks in the sunvisor bracket (A)
        - Any cracks in the sunvisor bracket cover (B)
        - Any bends or cracks in the sunvisor shaft (C)

GETtheMANUALS.org

- Any cracks in the sunvisor base (D)
- Any cracks in the vanity mirror base (E)

3. If the holder grommet is damaged or stress-whitened, replace the holder grommet and the holder as an assembly.

14. Quarter Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the quarter pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the quarter pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the quarter pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitening in the quarter pillar trim
            - Any cracks or stress-whitened areas in the clip seating surfaces (B)
        - After checking and adjusting the overlap between the headliner and the quarter pillar trim, replace the upper clip (C) with a new one.
        - If the clips (D) are damaged or stress-whitened, replace them with new ones.

GETtheMANUALS.org

Fig. 183: Identifying Quarter Pillar Trim, Clip Seating Surfaces And Upper Clip

15. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

GETtheMANUALS.org

Fig. 184: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 185: Applying Masking Tape On Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

This illustration shows the A-pillar.

Fig. 186: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

GETtheMANUALS.org

This illustration shows the A-pillar.

26. B-Pillar Upper/Lower Trim - Check
    1. If the side curtain airbag has deployed, replace the B-pillar upper trim (A) and the B-pillar lower trim (B), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the B-pillar upper/lower trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the trim and replace it with a new one if it has any of the following damage:
            - Any cracks or deformations in the B-pillar upper trim or the upper hooks (C), or any stress-whitened areas in the upper part of the trim
            - Any cracks or deformations in the B-pillar lower trim, or any breakages in the part (D) fitted with the B-pillar upper trim
            - Any cracks or stress-whitening areas in the clip seating surfaces (E)
    3. If the clips (F) are damaged or stress-whitened, replace them with new ones.

Trim inspection

GETtheMANUALS.org

27. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

GETtheMANUALS.org

Fig. 209: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 210: Applying Masking Tape On Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

This illustration shows the A-pillar.

Fig. 211: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

GETtheMANUALS.org

This illustration shows the A-pillar.

SEAT BELT INSPECTION

SPECIAL TOOL DESCRIPTION

Image	Description/Tool Number
	Push Pin/Grab Rail Cap Pliers 07AAC-001A100

GETtheMANUALS.org

INSPECTION

1. Seat Belt - Inspection (In Vehicle)

   In-Vehicle

   1. Check that the seat belt is not twisted or caught on anything.
   2. After installing the anchors, check for free movement on the anchor bolts. If necessary, remove the anchor bolts, and check that the washers and other parts are not damaged or improperly installed.
   3. Check the seat belts for damage or discoloration. Clean with a shop towel if necessary. Use only soap and water to clean the seat belts.

      NOTE: Dirt build-up in the loops of the upper anchors can cause the seat belts to retract slowly. Wipe the inside of the loops with a shop towel dampened with isopropyl alcohol.

   4. Check that the seat belt does not lock when pulled out slowly. The seat belt is designed to lock only during a sudden stop or impact.
   5. Make sure that the seat belt will retract automatically when released.
   6. For each passenger's seat belt, check the seat belt retractor locking mechanism automatic locking retractor (ALR). This function is for securing child seats.
   7. Pull out the seat belt all the way to engage the ALR. The seat belt should retract with a ratcheting sound, but not extend. This is normal.
   8. To disengage the ALR, release the seat belt and allow it to fully retract, then pull out the seat belt part-way. The seat belt should retract and extend normally.
   9. Replace the seat belt with a new assembly if there is any abnormality. Do not disassemble any part of the seat belt for any reason.

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the

GETtheMANUALS.org

PRECAUTIONS AND PROCEDURES before doing repairs or service.

1. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 228: Identifying Battery Negative And Positive Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Door Sill Trim - Both Sides

NOTE: Repeat on the opposite side.

1. Detach the hooks (A) and the tabs (B) from the kick panel (C) and the B-pillar lower trim (D), and pull up the front door inner sill trim (E) by hand to detach the clips (F), then remove the trim.

GETtheMANUALS.org

Fig. 229: Pulling Up Front Door Inner Sill Trim

INSPECTION

1. Seat Belt - Inspection (Out of Vehicle)

GETtheMANUALS.org

Out of Vehicle

For front seat belt retractors with seat belt tensioners, review **THE SRS COMPONENT LOCATIONS** , and **THE PRECAUTIONS AND PROCEDURES** before doing repairs or service.

Retractor

1. Before installing the retractor, check that the seat belt can be pulled out freely.
2. Make sure that the seat belt does not lock when the retractor (A) is leaned slowly up to 15 ° from the mounted position. The seat belt should lock when the retractor is leaned over 40 °. Do not attempt to disassemble the retractor.
3. Replace the seat belt with a new assembly if there is any abnormality. Do not disassemble any part of the seat belt for any reason.

Front

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Headliner - Check
    1. If the side curtain airbag has deployed, replace the headliner and removed trim pieces, along with the other parts listed for side curtain airbag deployment.
    2. To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the headliner and all removed trim. Replace any pieces with the following damage:
        - Any creases or tears in the headliner (A)
        - Any damages around the grab handle holes (B) or the sunvisor holes (C) in the headliner
        - Any clip bases (D) which have come off the headliner
        - Any fasteners (E) or clip bases (F) which have come off the headliner

GETtheMANUALS.org

3. At the right quarter pillar, connect the connectors (A), and install the connector clips (B) and the harness clip (C).

Fig. 287: Identifying Connectors, Connector Clips And Harness Clip (Right Quarter Pillar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. At the passenger's A-pillar, connect the connectors (A), and install the harness clips (B).

Fig. 288: Identifying Connectors And Harness Clip (Passenger A-Pillar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Without moonroof: At the driver's A-pillar, connect the connector (A), and install the harness clips (B).

GETtheMANUALS.org

Fig. 289: Identifying Connectors And Harness Clip (Driver A-pillar)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Sunvisor Holder
    1. Install the holder (A) into the holder grommet (B) by turning it 45 ° clockwise.
    2. Install the holder and the holder grommet as an assembly into the body by pushing it until the hooks snap into place securely.

Fig. 290: Identifying Holder And Holder Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Sunvisor - Check
    1. If the side curtain airbag has deployed, replace the sunvisor, along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, inspect the sunvisor for damage. A damaged sunvisor may cause the side curtain airbags to deploy improperly, possibly causing injury. Replace the sunvisor if it has any of the following damage:
        - Any cracks in the sunvisor bracket (A)
        - Any cracks in the sunvisor bracket cover (B)
        - Any bends or cracks in the sunvisor shaft (C)

GETtheMANUALS.org

- Any cracks in the sunvisor base (D)
- Any cracks in the vanity mirror base (E)

3. If the holder grommet is damaged or stress-whitened, replace the holder grommet and the holder as an assembly.

Fig. 291: Identifying Sunvisor Bracket, Cover, Shaft, Base And Vanity Mirror Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Sunvisor - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Connect the connector (A), and install the sunvisor (B).

Fig. 292: Identifying Connector And Sunvisor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While holding the bracket cover (A), rotate the sunvisor (B) forward until the tab (C) snaps into place.

GETtheMANUALS.org

3. Gently pull down on the sunvisor to make sure it is properly secured in the body.
4. Rotate the sunvisor into the holder (D).

Fig. 293: Rotating Sunvisor Into Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Grab Handle - Check
    1. If the side curtain airbag has not deployed, inspect the grab handle (A) for damage. A damaged grab handle may cause the side curtain airbag to deploy improperly, possibly causing injury. Replace the grab handle if it has any of the following damage:
        - Any cracks or breakage in the grab handle
        - Any cracks or stress-whitening in the caps (B)

13. Quarter Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the quarter pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the quarter pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the quarter pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitening in the quarter pillar trim
            - Any cracks or stress-whitened areas in the clip seating surfaces (B)
    3. After checking and adjusting the overlap between the headliner and the quarter pillar trim, replace the upper clip (C) with a new one.
    4. If the clips (D) are damaged or stress-whitened, replace them with new ones.

GETtheMANUALS.org

Fig. 303: Identifying Quarter Pillar Trim, Clip Seating Surfaces And Upper Clip

14. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

GETtheMANUALS.org

Fig. 304: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 305: Applying Masking Tape On Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

This illustration shows the A-pillar.

Fig. 306: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

GETtheMANUALS.org

This illustration shows the A-pillar.

15. Quarter Pillar Trim - Both Sides
    1. Install a new clip (A) to the quarter pillar trim (B).

Fig. 308: Installing Clip Into Quarter Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Pass the rear seat belt lower anchor (A) through the hole in the quarter pillar trim (B).
    3. Fit the clips into the holes in the quarter pillar.
    4. Lightly push the quarter pillar trim into place, then install the trim.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the ribs.**

GETtheMANUALS.org

- **Do not push too hard on the quarter pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the quarter pillar trim to verify that all clips are securely fastened.**
- **Make sure the clips (C, D, and E) snap into place securely.**

Fig. 309: Identifying Rear Seat Belt Lower Anchor And Quarter Pillar Trim With Clip

25. B-Pillar Upper/Lower Trim - Check
    1. If the side curtain airbag has deployed, replace the B-pillar upper trim (A) and the B-pillar lower trim (B), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the B-pillar upper/lower trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the trim and replace it with a new one if it has any of the following damage:
            - Any cracks or deformations in the B-pillar upper trim or the upper hooks (C), or any stress-whitened areas in the upper part of the trim
            - Any cracks or deformations in the B-pillar lower trim, or any breakages in the part (D) fitted with the B-pillar upper trim
            - Any cracks or stress-whitening areas in the clip seating surfaces (E)
        - If the clips (F) are damaged or stress-whitened, replace them with new ones.

Trim inspection

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

GETtheMANUALS.org

Fig. 329: Identifying Headliner And Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 330: Applying Masking Tape On Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

This illustration shows the A-pillar.

Fig. 331: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

GETtheMANUALS.org

This illustration shows the A-pillar.

31. Rear Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Pull the release strap to fold down the rear seat, then lift-up and latch the rear seat-back in the upright position.
2. Install the rear door inner sill trim (A). Make sure the clips (B, C), the hooks (D), and the tab (E) snap into place securely.

Fig. 337: Identifying Rear Door Sill Trim With Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

32. A-Pillar Trim - Check
    1. If the side curtain airbag has deployed, replace the A-pillar trim (A), along with the other parts listed for side curtain airbag deployment.
    2. If the side curtain airbag has not deployed, check the A-pillar trim and note the following items:
        - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the A-pillar trim and replace it with a new one if it has any of the following damage:
            - Any cracks, deformations, or stress-whitened areas in the A-pillar trim
            - Any cracks or stress-whitening in the clip seating surfaces (B)
        - After checking and adjusting the overlap between the headliner and the A-pillar trim, replace the upper clip (C) with a new one.
        - If the clips (D) are damaged or stress-whitened, replace them with new ones.

GETtheMANUALS.org

Fig. 338: Identifying Quarter Pillar Trim, Clip Seating Surfaces And Upper Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

33. Headliner/Pillar Trim Overlap - Check

Checking and Adjusting the Headliner/Pillar Trim Overlap

To prevent the side curtain airbag from deploying and damaging the pillar trim (A-pillar trim, B-pillar trim, quarter pillar trim), the overlap between the headliner and pillar trim must be 8.0+0/-2.0 mm (0.31+0/-0.08 in). To check the overlap, do this:

1. Install the headliner (A) and the pillar trim (B).

This illustration shows the A-pillar.

Fig. 339: Identifying Headliner And Pillar Trim

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply masking tape (A) to the headliner (B) to mark the upper edge of the pillar trim (C).

This illustration shows the A-pillar.

Fig. 340: Applying Masking Tape On Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pillar trim, and measure the headliner overlap.
   - If the overlap is 8.0+0/-2.0 mm (0.31+0/-0.08 in), remove the tape, and install the pillar trim.
   - If the overlap is more than 8.0 mm (0.31 in), go to step 4.

This illustration shows the A-pillar.

Fig. 341: Measuring Headliner Overlap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully trim the headliner with a utility knife, reducing the overlap to 8.0+0/-2.0 mm (0.31+0/-0.08 in).
5. Remove the tape, and install the pillar trim.

GETtheMANUALS.org

This illustration shows the A-pillar.

Fig. 342: Installing Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. A-Pillar Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Carefully install a new upper clip (A) to the A-pillar trim (B).

Fig. 343: Installing Upper Clip To A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Insert the bottom portion of the A-pillar trim (A) into the dashboard (B). Place the trim over the A-pillar (C), and fit its upper clip (D) and the other clips (E) into the holes (F) in the A-pillar, then

GETtheMANUALS.org

lightly push the trim into place.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the trim ribs.**
- **Do not push too hard on the A-pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the A-pillar trim to verify that all clips are securely fastened.**

Fig. 344: Inserting Bottom Portion Of A-Pillar Trim Into Dashboard
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. Front Door Opening Seal As Needed - Both Sides

NOTE: **Repeat this procedure on the opposite side.**

1. Install the front door opening seal (A). Make sure the seal is installed securely into the hooks (B).

GETtheMANUALS.org

36. Front Door Sill Trim - Both Sides

NOTE: Repeat this procedure on the opposite side.

1. Install the front door inner sill trim (A). Make sure the clips (B), the hooks (C), and the tabs (D) snap into place securely.

Fig. 346: Installing Front Door Inner Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

37. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 347: Identifying Battery Positive And Negative Cable

DRIVER'S POWER SEAT ADJUSTMENT SWITCH REMOVAL, INSTALLATION, AND TEST

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE: Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.

1. Front Cover
    1. Remove the screw (A), and release the hook (B), the pin (C), and the tabs (D), then remove the front cover (E).

Fig. 1: Identifying Front Cover, Hook, Tabs, Pin And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Seat Recline Cover
    1. Remove the screw (A), and detach the clip (B).
    2. Release the tabs (C).
    3. Pull up the recline cover (D) to release the hook (E).
    4. Disconnect the connectors.

GETtheMANUALS.org

5. Remove the upper center inner cover (F).
6. Remove the wire harness (G) from the hooks (H), then remove the recline cover.

Fig. 2: Identifying Front Seat Recline Cover And Related Components

DRIVER'S SEAT POSITION SENSOR OPERATION CHECK

PROCEDURE

Check the driver's seat position sensor operation after the driver's seat position sensor replacement.

1. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

Fig. 37: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Driver's Seat Position Sensor Operation Check
    1. Make sure the driver's seat is in the full forward position.
    2. From the HDS Main Menu, select SRS, then Data List.
    3. Using two pieces of tape (A), make alignment marks (B) on the recline cover (C) and the front door sill trim (D) as shown. The driver's seat position sensor should read NEAR on the HDS.
    4. Move the seat back in small increments (about 5 mm, 0.20 in) until the driver's seat position sensor reads NOT NEAR on the HDS. The seat should be about 55 mm (2.17 in) from the front.

GETtheMANUALS.org

Fig. 38: Identifying Alignment Marks On Recline Cover And Front Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: **It takes a few seconds for the HDS to display changes, so wait for about 5 seconds between each movement. If the driver's seat position sensor data does not work as described above, check the driver's seat position sensor for damage, and replace parts as needed.**

5. Turn the ignition switch to LOCK (0).

DRIVER'S SEAT POSITION SENSOR REMOVAL AND INSTALLATION

REMOVAL

NOTE:

- **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.**
- **Before doing this procedure, raise the driver's seat all the way up, and position all the way rearward.**

GETtheMANUALS.org

1. Front Seat Belt Lower Anchor Bolt
    1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat Recline Cover - Driver's Side

Power Seat

1. Remove the screw (A), and detach the clip (B).
2. Release the tabs (C).
3. Pull up the recline cover (D) to release the hook (E).
4. Disconnect the connectors.
5. Remove the upper center inner cover (F).
6. Remove the wire harness (G) from the hooks (H), then remove the recline cover.

GETtheMANUALS.org

Fig. 47: Identifying Front Seat Recline Cover And Related Components (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

1. Remove the recline knob (A).
2. Remove the screw (B), and detach the clip (C).
3. Release the front hooks (D) of the recline cover (E) from the recline inner cover (F).
4. Release the rear hooks (G) of the recline cover from the recline inner cover.
5. Detach the hook (H) by pulling the recline cover back by hand.
6. Gently pull out the recline cover and remove it.

GETtheMANUALS.org

Fig. 48: Identifying Front Seat Recline Cover And Related Components (Manual Seat Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Driver's Seat Position Sensor
    1. Disconnect the driver's seat position sensor connector on the driver's seat wire harness.
    2. Power seat: Remove the TORX bolt and nut using a TORX T30 bit, then remove the driver's seat position sensor (A).
    3. Manual seat: Remove the TORX bolt using a TORX T30 bit, then remove the driver's seat position sensor (A).

    Power seat

INSTALLATION

NOTE:

- **SRS components are located in this area. Review the SRS COMPONENT LOCATIONS and the PRECAUTIONS AND PROCEDURES before doing repairs or service.**
- **Be sure to install the harness so it is not pinched or interferes with other parts.**

GETtheMANUALS.org

- **Check the driver's seat position sensor operation after the driver's seat position sensor replacement.**

1. Driver's Seat Position Sensor
    1. Power seat: Install the driver's seat position sensor (A) with the new TORX bolts using a TORX T30 bit, and new nut.
    2. Manual seat: Install the driver's seat position sensor (A) with the new TORX bolts using a TORX T30 bit.
    3. Connect the driver's seat position sensor connector on the driver's seat wire harness.

    Power seat

2. Front Seat Recline Cover - Driver's Side

Power Seat

1. Install the upper center inner cover (A) to the recline cover (B).
2. Connect the connector, then install the wire harness (C) to the hooks (D).
3. Install the clip (E) and tabs (F), then install the recline cover.
4. Install the tabs (G), then install the screw (H).

GETtheMANUALS.org

Fig. 53: Identifying Front Seat Recline Cover And Related Components (Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Manual Seat

1. Install the hook (A) and clip (B) of the recline cover (C).
2. Install the front hooks (D) to the recline inner cover (E).
3. Install the hook (F) of the recline cover to the recline inner cover.
4. Install the recline knob (G) and the screw (H).

GETtheMANUALS.org

Fig. 54: Installing Front Seat Recline Cover (Manual Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Front Seat Height Adjuster Handle - Manual Seat
    1. Install the height adjuster handle (A) and the screws (B).
    2. Install the cap (C). Make sure the hooks (D) snap into place securely.

GETtheMANUALS.org

Fig. 55: Identifying Height Adjuster Handle, Cap, Hooks And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat - Driver's Side
    1. Connect the connectors (A).
    2. Install the harness clip (B).

Fig. 56: Identifying Front Seat Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the seat mounting bolts (A).

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**

GETtheMANUALS.org

- **Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Front Side

4. Install the rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

Fig. 59: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Battery Terminal (SRS) - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

GETtheMANUALS.org

Fig. 60: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Seat Belt Lower Anchor Bolt
    1. Install the lower anchor bolt.

NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

Fig. 61: Installing Front Seat Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

GETtheMANUALS.org

Fig. 62: Installing Front Seat Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

Fig. 63: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. DTC - Clear
    1. Clear the DTC(s) by following the screen prompts on the HDS.
    2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
9. Driver's Seat Position Sensor Operation Check

GETtheMANUALS.org

1. Make sure the driver's seat is in the full forward position.
2. From the HDS Main Menu, select SRS, then Data List.
3. Using two pieces of tape (A), make alignment marks (B) on the recline cover (C) and the front door sill trim (D) as shown. The driver's seat position sensor should read NEAR on the HDS.
4. Move the seat back in small increments (about 5 mm, 0.20 in) until the driver's seat position sensor reads NOT NEAR on the HDS. The seat should be about 55 mm (2.17 in) from the front.

NOTE: **It takes a few seconds for the HDS to display changes, so wait for about 5 seconds between each movement. If the driver's seat position sensor data does not work as described above, check the driver's seat position sensor for damage, and replace parts as needed.**

5. Turn the ignition switch to LOCK (0).

Fig. 64: Identifying Alignment Marks On Recline Cover And Front Door Sill Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Confirm Proper SRS Operation
    1. Turn the ignition switch to ON (II), and check that the SRS indicator comes on for about 6 seconds

GETtheMANUALS.org

and then goes off.

FRONT SEAT ARMREST REMOVAL AND INSTALLATION

REMOVAL

1. Front Seat Armrest
    1. Remove the cap (A) with the appropriate trim tool.
    2. Remove the center pin (B), the bushing (C), and the washer (D), then remove the armrest (E).

Fig. 65: Identifying Front Seat Armrest, Center Pin, Bushing, Washer And Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pins (A) from the seat-back.

Fig. 66: Identifying Seat Back Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Front Seat Armrest

GETtheMANUALS.org

1. Install the pins (A) to the seat-back.

FRONT SEAT FRAME REMOVAL AND INSTALLATION

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE:

- **Steps 1-19 show removing the driver's side, steps 20-35 show removing the passenger's side.**
- **Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.**

1. Front Seat Belt Lower Anchor Bolt

GETtheMANUALS.org

1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 157: Removing Front Seat Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the lower anchor bolt (A).

Fig. 158: Removing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
   1. Make sure the ignition switch is in LOCK (0).
   2. Disconnect and isolate the negative cable (A) from the battery.

      NOTE: Always disconnect the negative side first.

   3. Disconnect the positive cable (B) from the battery.
   4. Wait at least 3 minutes before starting work.

GETtheMANUALS.org

Fig. 159: Identifying Battery Positive And Negative Cable

3. OPDS Unit (For some models)

NOTE:

- **Be sure to install the harness so that they are not pinched or interfering with other parts.**
- **Make sure that the seat-back cover/pad is installed properly. Improper installation may prevent proper deployment.**

1. Install the OPDS unit (A).

Fig. 263: Identifying OPDS Unit With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

4. ODS Unit (For some models)

NOTE:

- **Be sure to install the harness so that they are not pinched or interfering with other parts.**
- **Make sure that the seat-back cover/pad is installed properly. Improper installation may prevent proper deployment.**

1. Install the ODS unit (A).

Fig. 264: Identifying OPDS Unit With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Side Airbag

NOTE:

- **If the side airbag cover is secured with tape, remove the tape.**
- **Do not open the lid on the side airbag cover.**
- **Make sure that the seat-back cover/pad is installed properly. Improper installation may prevent proper deployment.**
- **Be sure to install the harness so that they are not pinched or interfering with other parts.**

1. Install the side airbag (A), then tighten the new mounting nuts.
2. Install the harness clip (B).

GETtheMANUALS.org

33. Head Restraint - Driver's Side
    1. Insert the head restraint (A) to the seat-back as shown.

Fig. 349: Inserting Head Restraint To Seat-Back (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. Battery Terminal (SRS) - Reconnection

GETtheMANUALS.org

NOTE: **If the battery performance is abnormal, test the battery.**

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

   NOTE: **Always connect the positive side first.**

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 350: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. Front Seat Belt Lower Anchor Bolt
    1. Install the lower anchor bolt.

       NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

GETtheMANUALS.org

Fig. 351: Installing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 352: Installing Front Seat Belt Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

Fig. 353: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

37. DTC - Clear
    1. Clear the DTC(s) by following the screen prompts on the HDS.
    2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
38. OPDS Sensor Initialization

OPDS Sensor Initialization

When you replace the front passenger's seat-back cover/pad, the SRS unit, and/or the ODS unit, initialize the OPDS sensor with the HDS.

NOTE:

- **Before initializing the OPDS sensor, clear the DTCs.**
- **Before initializing the OPDS sensor, make sure the battery is fully charged.**
- **A new (uninitialized) ODS unit installed with a faulty OPDS sensor (DTC 86-1x or 86-2x) can cause DTCs 85-71 and 85-78. If the SRS has a hard DTC 86-1x or 86-2x, troubleshoot the DTCs completely before replacing the ODS unit.**
- **Make sure all components of the front passenger's seat are correctly installed.**
- **Make sure nothing is on the front passenger's seat, including aftermarket seat covers or mats.**
- **Make sure there is nothing in the front passenger's seat-back pocket.**
- **Dehumidify inside of the vehicle with A/C.**

1. Set the seat-back in a normal position.
2. From the HDS Main Menu, select SRS, then INITIALIZATION. In the INITIALIZATION Menu,

GETtheMANUALS.org

select ODS Initialization. Follow the prompts until the OPDS sensor initialization has been completed.

3. Turn the ignition switch to LOCK (0), then wait for 10 seconds.

NOTE: **If the ODS unit fails to initialize after several attempts, replace the seat-back cover/pad equipped with an OPDS sensor, and retry. If the ODS unit continues to fail to initialize, replace the ODS unit.**

FRONT SEAT LUMBAR SUPPORT REMOVAL AND INSTALLATION

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE: **Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.**

1. Front Seat Belt Lower Anchor Bolt
   1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 354: Removing Front Seat Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   2. Remove the lower anchor bolt (A).

GETtheMANUALS.org

Fig. 355: Removing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.
    4. Wait at least 3 minutes before starting work.

Fig. 356: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

GETtheMANUALS.org

Fig. 357: Pulling Head Restraint (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat - Driver's Side
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

Fig. 358: Removing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

2. Remove the front mounting bolts (A) from the front seat.

Fig. 359: Identifying Front Seat Mounting Bolts

FRONT SEAT-BACK COVER REMOVAL AND INSTALLATION

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE:

- **Steps 1-9 show removing the driver's side, steps 10-17 show removing the passenger's side.**
- **Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.**

1. Front Seat Belt Lower Anchor Bolt

GETtheMANUALS.org

1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 450: Removing Front Seat Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the lower anchor bolt (A).

Fig. 451: Removing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
   1. Make sure the ignition switch is in LOCK (0).
   2. Disconnect and isolate the negative cable (A) from the battery.

      NOTE: Always disconnect the negative side first.

   3. Disconnect the positive cable (B) from the battery.
   4. Wait at least 3 minutes before starting work.

GETtheMANUALS.org

Fig. 452: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 453: Pulling Head Restraint (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat - Driver's Side
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

GETtheMANUALS.org

18. HDS DLC - Connection
    1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.
    2. Turn the ignition switch to ON (II).
    3. Make sure the HDS communicates with the vehicle. If it does not communicate, go to the DLC circuit troubleshooting.

GETtheMANUALS.org

Fig. 550: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. DTC - Clear
    1. Clear the DTC(s) by following the screen prompts on the HDS.
    2. Turn the ignition switch to LOCK (0), then wait for 10 seconds.
20. OPDS Sensor Initialization

OPDS Sensor Initialization

When you replace the front passenger's seat-back cover/pad, the SRS unit, and/or the ODS unit, initialize the OPDS sensor with the HDS.

NOTE:

- **Before initializing the OPDS sensor, clear the DTCs.**
- **Before initializing the OPDS sensor, make sure the battery is fully charged.**
- **A new (uninitialized) ODS unit installed with a faulty OPDS sensor (DTC 86-1x or 86-2x) can cause DTCs 85-71 and 85-78. If the SRS has a hard DTC 86-1x or 86-2x, troubleshoot the DTCs completely before replacing the ODS unit.**
- **Make sure all components of the front passenger's seat are correctly installed.**
- **Make sure nothing is on the front passenger's seat, including aftermarket seat covers or mats.**
- **Make sure there is nothing in the front passenger's seat-back pocket.**
- **Dehumidify inside of the vehicle with A/C.**

1. Set the seat-back in a normal position.
2. From the HDS Main Menu, select SRS, then INITIALIZATION. In the INITIALIZATION Menu,

GETtheMANUALS.org

select ODS Initialization. Follow the prompts until the OPDS sensor initialization has been completed.

3. Turn the ignition switch to LOCK (0), then wait for 10 seconds.

NOTE: **If the ODS unit fails to initialize after several attempts, replace the seat-back cover/pad equipped with an OPDS sensor, and retry. If the ODS unit continues to fail to initialize, replace the ODS unit.**

REMOVAL

GETtheMANUALS.org

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE: **Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.**

1. Front Seat Belt Lower Anchor Bolt
    1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 552: Removing Front Seat Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Remove the lower anchor bolt (A).

Fig. 553: Removing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).

GETtheMANUALS.org

2. Disconnect and isolate the negative cable (A) from the battery.

NOTE: Always disconnect the negative side first.

3. Disconnect the positive cable (B) from the battery.
4. Wait at least 3 minutes before starting work.

Fig. 554: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
   1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 555: Pulling Head Restraint (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat - Driver's Side
   1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

GETtheMANUALS.org

Fig. 556: Removing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the front mounting bolts (A) from the front seat.

Fig. 557: Identifying Front Seat Front Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 558: Identifying Front Seat Rear Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Fig. 559: Identifying Front Seat Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat Armrest
    1. Remove the cap (A) with the appropriate trim tool.
    2. Remove the center pin (B), the bushing (C), and the washer (D), then remove the armrest (E).

GETtheMANUALS.org

Fig. 560: Identifying Front Seat Armrest, Center Pin, Bushing, Washer And Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the pins (A) from the seat-back.

Fig. 561: Identifying Seat Back Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Front Seat-Back As Needed - Driver's Side
    1. Release the elastic strap (A) from the seat cushion frame springs (B), then pull back the under cover (C) of the seat-back cover.

GETtheMANUALS.org

Fig. 562: Releasing Elastic Strap From Seat Cushion Frame Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Release the hook strip (A).
3. Unzip the seat-back cover (B).

Fig. 563: Removing Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

4. Release the hook strips (A).

Fig. 564: Identifying Seat-Back Cover Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Release the hooks (A).

GETtheMANUALS.org

Fig. 565: Releasing Seat-Back Cover Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Power Lumbar Support Motor Cover
    1. Release the hook (A), then remove the pin (B).
    2. Pull the cover up to release it from the upper hook (C), then remove the power lumbar support motor cover (D).

Fig. 566: Identifying Power Lumbar Support Motor Cover, Hooks And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Power Lumbar Support Motor - Test
    1. Disconnect the connector.
    2. Test the power lumbar support motor by applying battery power and ground to the terminals according to the table.
    3. If the motor does not run smoothly, replace it.
    4. Connect the connector.

GETtheMANUALS.org

4. Install the rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

GETtheMANUALS.org

Fig. 579: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Head Restraint - Driver's Side
    1. Insert the head restraint (A) to the seat-back as shown.

Fig. 580: Inserting Head Restraint To Seat-Back (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Battery Terminal (SRS) - Reconnection

GETtheMANUALS.org

NOTE: **If the battery performance is abnormal, test the battery.**

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

   NOTE: **Always connect the positive side first.**

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 581: Identifying Battery Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Front Seat Belt Lower Anchor Bolt
   1. Install the lower anchor bolt.

      NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

GETtheMANUALS.org

Fig. 582: Installing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

Fig. 583: Installing Front Seat Belt Lower Anchor Cover

POWER LUMBAR SUPPORT SWITCH REMOVAL, INSTALLATION, AND TEST

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE: Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.

1. Front Cover
    1. Remove the screw (A), and release the hook (B), the pin (C), and the tabs (D), then remove the

GETtheMANUALS.org

front cover (E).

Fig. 584: Identifying Front Cover, Hook, Tabs, Pin And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Seat Recline Cover
    1. Remove the screw (A), and detach the clip (B).
    2. Release the tabs (C).
    3. Pull up the recline cover (D) to release the hook (E).
    4. Disconnect the connectors.
    5. Remove the upper center inner cover (F).
    6. Remove the wire harness (G) from the hooks (H), then remove the recline cover.

GETtheMANUALS.org

Fig. 585: Identifying Front Seat Recline Cover And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Power Lumbar Support Switch
    1. Remove the power lumbar support switch cover (A).
    2. Remove the power lumbar support switch (B) from the recline cover (C).

Fig. 586: Identifying Power Lumbar Support Switch, Cover And Recline Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Power Lumbar Support Switch - Test
    1. Reinstall the power lumbar support switch cover (A) to the power lumbar support switch (B).
    2. Check for continuity between the terminals in each switch position according to the table.
    3. If the continuity is not as specified, replace the switch.

GETtheMANUALS.org

Fig. 587: Identifying Power Lumbar Support Switch Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Terminal / Position	1	2	3	4	5

INSTALLATION

GETtheMANUALS.org

NOTE: Steps 1-5 show installing the right side, steps 6-11 show installing the left side.

1. Rear Seat-Back Frame - Right Side
    1. Install the rear seat-back damper (A) to the rear seat-back frame (B).

Fig. 886: Identifying Rear Seat-Back Damper And Frame With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the rear seat-back head restraint control cable (A), the rear seat-back lock knob control cable (B), the rear seat-back cancel control cable (C), and the rear seat-back arrange control cable (D) to the rear seat-back arrange unit (E), then install the cables to the cable bracket (F).

NOTE: Make sure each cable is connected securely.

GETtheMANUALS.org

Fig. 887: Installing Cables To Cable Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert the cables to the seat-back frame (A) as shown, and install the cable clips (B). The clips snap into place securely.
4. Install the rear seat-back cancel control cable (C) to the bracket (D).
5. Install the rear seat-back arrange unit (E).

GETtheMANUALS.org

Fig. 888: Installing Rear Seat-Back Cancel Control Cable To Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the wire tie (A) to the seat-back frame (B) as shown.

NOTE: Wire tie the cables at the locations marked with tape (C).

GETtheMANUALS.org

SEAT HEATER REMOVAL AND INSTALLATION - SEAT-BACK HEATER

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE:

- **Steps 1-10 show removing the driver's side, steps 11-19 show removing the passenger's side.**
- **Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.**

1. Front Seat Belt Lower Anchor Bolt

GETtheMANUALS.org

1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 1057: Removing Front Seat Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the lower anchor bolt (A).

Fig. 1058: Removing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
   1. Make sure the ignition switch is in LOCK (0).
   2. Disconnect and isolate the negative cable (A) from the battery.

      NOTE: Always disconnect the negative side first.

   3. Disconnect the positive cable (B) from the battery.
   4. Wait at least 3 minutes before starting work.

GETtheMANUALS.org

Fig. 1059: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 1060: Pulling Head Restraint (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat - Driver's Side
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

GETtheMANUALS.org

Fig. 1061: Removing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the front mounting bolts (A) from the front seat.

Fig. 1062: Identifying Front Seat Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 1063: Identifying Front Seat Rear Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Fig. 1064: Identifying Front Seat Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Front Seat Armrest
    1. Remove the cap (A) with the appropriate trim tool.
    2. Remove the center pin (B), the bushing (C), and the washer (D), then remove the armrest (E).

GETtheMANUALS.org

SEAT HEATER SWITCH REMOVAL, INSTALLATION, AND TEST

REMOVAL

1. Seat Heater Switch
    1. Remove the seat heater switch panel (A).

GETtheMANUALS.org

Fig. 1161: Identifying Seat Heater Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the seat heater switches (A).

Fig. 1162: Identifying Seat Heater Switches
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Seat Heater Switch - Test
    1. Check for continuity between the terminals in each switch position according to the table.

NOTE:

- **Make sure the correct test lead (+or -) is placed on the terminal.**
- **When checking for continuity across the diode, use the diode setting ( ) on the digital volt/ohm meter to check the diode bias.**
- **Note this important operating characteristic; a diode is one that**

GETtheMANUALS.org

conducts fully in one direction (forward) and not at all in the opposite direction (reverse).

2. If the continuity is not as specified, replace the switch.

SEAT HEATER TEST

REMOVAL

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

NOTE: **Before the front power seat is removed, slide the front power seat to the half-way position, then raise the seat to the highest position.**

GETtheMANUALS.org

1. Front Seat Belt Lower Anchor Bolt
    1. Slide the front seat forward fully, carefully pry up on the bottom edge of the anchor cover (A) at the pry point (B) with the appropriate trim tool to release the hooks (C) and the tab (D), then remove the cover by pulling it up.

Fig. 1167: Removing Front Seat Lower Anchor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the lower anchor bolt (A).

Fig. 1168: Removing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Battery Terminal (SRS) - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.

GETtheMANUALS.org

4. Wait at least 3 minutes before starting work.

Fig. 1169: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Head Restraint - Driver's Side
    1. Push and hold the knob (A), then pull out the head restraint (B) as shown.

Fig. 1170: Pulling Head Restraint (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat - Driver's Side
    1. Detach the hooks (A), then remove the rear inner seat track end cover (B) and the rear outer seat track end cover (C).

GETtheMANUALS.org

Fig. 1171: Removing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the front mounting bolts (A) from the front seat.

Fig. 1172: Identifying Front Seat Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

3. Remove the rear mounting bolts (A) from the front seat.

Fig. 1173: Identifying Front Seat Rear Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the connectors (A).
5. Detach the harness clip (B).

Fig. 1174: Identifying Front Seat Connectors And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Seat Heater Driver's Side - Test
    1. Disconnect connectors A, B, and C.

    Seat-Back Heater

GETtheMANUALS.org

2. Check for continuity between seat heater connector A terminals No. 1 and No. 2. There should be continuity.
3. If the continuity is not as specified, replace the seat-back heater.

Seat Cushion Heater

4. Check for continuity between connector B terminal No. 4 [No. 3], and connector C terminal No. 1 [No. 1]. There should be continuity.

Without power seat

Fig. 1175: Identifying Seat Heater Driver Side Connector Terminals (Without Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With power seat

GETtheMANUALS.org

Fig. 1176: Identifying Seat Heater Driver Side Connector Terminals (With Power Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

[]: With power seat

5. If the continuity is not as specified, replace the seat cushion heater.
6. Check for continuity between connector B terminal No. 2, and connector C terminal No. 2. There should be continuity.
7. If the continuity is not as specified, replace the seat cushion heater.
8. Check for continuity between connector B terminal No. 3 [No. 1], and connector C terminal No. 2 [No. 2]. There should be continuity.

   []: With power seat

9. If the continuity is not as specified, replace the seat cushion heater.

2. Seat Heater Passenger's Side - Test
   1. Disconnect the connectors A, B, and C.

      Seat-Back Heater

   2. Check for continuity between seat heater connector A terminals No. 1 and No. 2. There should be continuity.

GETtheMANUALS.org

Fig. 1177: Identifying Seat Heater Passenger Side Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the continuity is not as specified, replace the seat-back heater.

Seat Cushion Heater

4. Check for continuity between connector B terminal No. 4, and connector C terminal No. 2. There should be continuity.
5. If the continuity is not as specified, replace the seat cushion heater.
6. Check for continuity between connector B terminal No. 2, and connector C terminal No. 3. There should be continuity.
7. If the continuity is not as specified, replace the seat cushion heater.
8. Check for continuity between connector B terminal No. 3, and connector C terminal No. 3. There should be continuity.
9. If the continuity is not as specified, replace the seat cushion heater.

INSTALLATION

SRS components are located in this area. Review the **SRS COMPONENT LOCATIONS** and the **PRECAUTIONS AND PROCEDURES** before doing repairs or service.

1. Front Seat - Driver's Side
    1. Connect the connectors (A).

GETtheMANUALS.org

2. Install the harness clip (B).

Fig. 1178: Identifying Front Seat Connectors And Clips (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the seat mounting bolts (A).

NOTE:

- **Tighten the bolts by hand first, then tighten them to the specified torque.**
- **Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten bolts 1 and 2, then slide it forward and tighten bolts 3 and 4.**

Front Side

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Side

Fig. 1180: Identifying Seat Mounting Bolts With Torque Specifications (Rear Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the rear inner seat track end cover (A) and the rear outer seat track end cover (B). Make sure the hooks (C) snap into place securely.

GETtheMANUALS.org

Fig. 1181: Installing Rear Inner And Outer Seat Track End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Head Restraint - Driver's Side
    1. Insert the head restraint (A) to the seat-back as shown.

Fig. 1182: Inserting Head Restraint To Seat-Back (Driver Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Battery Terminal (SRS) - Reconnection

GETtheMANUALS.org

NOTE: **If the battery performance is abnormal, test the battery.**

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

   NOTE: **Always connect the positive side first.**

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

Fig. 1183: Identifying Battery Positive And Negative Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Front Seat Belt Lower Anchor Bolt
   1. Install the lower anchor bolt.

      NOTE: **Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.**

GETtheMANUALS.org

Fig. 1184: Installing Front Seat Belt Lower Anchor Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the anchor cover (A). Make sure the hooks (B) and the tab (C) snap into place securely.

RELAY	
BATTERY	**TEST**
STARTER	**STARTER REMOVAL, INSTALLATION, AND PERFORMANCE TEST**
	STARTER OVERHAUL

STARTING SYSTEM SYMPTOM TROUBLESHOOTING INDEX

Symptom	Diagnostic procedure	Also check for
Engine does not crank	1. Check for loose battery terminals or connections. 2. **TEST THE BATTERY FOR A LOW STATE OF CHARGE** . 3. **Check for PGM-FI DTCs** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** . 4. Check the starter. Refer to **STARTER OVERHAUL** and **STARTER REMOVAL, INSTALLATION, AND PERFORMANCE TEST**. 5. **CHECK THE STARTER CUT RELAY** . 6. **CHECK THE STARTER SYSTEM CIRCUIT TROUBLESHOOTING**. 7. **CHECK THE TRANSMISSION RANGE SWITCH** . 8. **CHECK THE IGNITION SWITCH AND ITS RELATED CIRCUIT** .	• Poor ground at G101 • Seized engine
Engine cranks, but does not start	1. **Check for PGM-FI DTCs** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** . 2. **CHECK THE PGM-FI MAIN RELAYS** . 3. Check for IMMOBI status and function for engine does not start with the immobilizer key. Refer to the following: • **ENGINE DOES NOT START WITH THE IMMOBILIZER KEY** • **IMMOBILIZER INDICATOR BLINKS** • **IMMOBILIZER INDICATOR DOES NOT GO OFF** 4. CHECK THE FUEL PRESSURE . 5. CHECK FOR A PLUGGED OR DAMAGED FUEL LINE . 6. **Check for a plugged fuel filter** See FUEL TANK UNIT DISASSEMBLY AND REASSEMBLY or FUEL TANK UNIT REMOVAL AND INSTALLATION . 7. **CHECK THE THROTTLE BODY** . 8. CHECK FOR LOW ENGINE COMPRESSION . 9. CHECK THE CAMSHAFT TIMING .	• Fuel level in tank • Weak or fouled spark plugs

GETtheMANUALS.org

	10. **Do the PCM reset** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** in the PGM-FI INSPECTION menu to cancel ALL INJECTORS STOP with the HDS.	
Engine is hard to start	Do the symptom troubleshooting for Engine will not starts, engine start but stalls immediately, or engine is hard to start. Refer to the following: • **ENGINE STALLS** • **ENGINE WILL NOT START, ENGINE STARTS BUT STALLS IMMEDIATELY, OR ENGINE IS HARD TO START**	Weak or fouled spark plugs
Engine cranks slowly	1. Check for loose battery terminals or connections. 2. **TEST THE BATTERY FOR A LOW STATE OF CHARGE** . 3. Check the starter for binding. Refer to **STARTER OVERHAUL** and **STARTER REMOVAL, INSTALLATION, AND PERFORMANCE TEST** 4. Check for excessive drag in the engine.	

STARTER SYSTEM CIRCUIT TROUBLESHOOTING

Special Tools Required

GETtheMANUALS.org

Alternator, Regulator, Battery, and Starter Tester OTC3131*

*: Available through the Honda Tool and Equipment Program 888-424-6857.

NOTE:

- **Air temperature must be between 59-100 °F (15-38 °C) during this procedure.**
- **The battery must be in good condition and fully charged.**

1. Battery test:
   - 1. **DO THE BATTERY TEST** .

   Does the display indicate Good Battery?

   YES : The battery is OK. Charge the battery if necessary, then go to step 2.

   NO : If the display indicates Replace Battery or Bad Cell, **REPLACE THE BATTERY** , then go to step 2.

2. Starting system check 1:
   - 1. **Connect the HDS to the DLC** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS** .
   - 2. Turn the ignition switch to ON (II).
   - 3. Make sure the HDS communicates with the vehicle and the PCM. If it does not communicate, **TROUBLESHOOT THE DLC CIRCUIT** .
   - 4. Select ALL INJECTORS STOP in the PGM-FI INSPECTION menu with the HDS.
   - 5. Set the parking brake, then with the shift lever in P or N, turn the ignition switch to START (III) to crank the engine.

   Does the starter crank the engine normally?

   YES : Select PCM reset in the PGM-FI INSPECTION menu to cancel ALL INJECTORS STOP with the HDS.

   NO : Go to step 3.

3. Starting system check 2:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Check the electrical connections at the battery, the battery negative cable to the body, the engine ground cables, and the starter for looseness and corrosion. Then try starting the engine again.

   Does the starter crank the engine normally?

   Starter cranks normally Repairing the loose connection corrected the problem. The starting system is OK. Select **PCM reset** See **HOW TO TROUBLESHOOT THE A/T SYSTEM** or **HOW TO**

GETtheMANUALS.org

TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS in the PGM-FI INSPECTION menu to cancel ALL INJECTORS STOP with the HDS.

Starter does not crank engine at all If the starter does not crank the engine at all, go to step 4.

Starter cranks abnormally If the starter cranks the engine erratically or too slowly, go to step 5.

Starter does not disengage from torque converter ring gear with key released If the starter does not disengage from the torque converter ring gear when you release the key, replace the starter, or remove and disassemble it. Refer to **STARTER OVERHAUL** and **STARTER REMOVAL, INSTALLATION, AND PERFORMANCE TEST**. Check for the following:

- Starter solenoid and switch malfunction
- Dirty drive gear or damaged overrunning clutch
- Damaged torque converter ring gear

4. Determine possible failure area (starter, starter circuit, ignition switch, transmission range switch):
   - 1. Make sure the shift lever is in P or N.
   - 2. Disconnect the starter subharness 1P connector (A).

Fig. 3: Identifying Battery Positive Terminal And Terminal B Starter Subharness 1P Connector No. 1
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   - 3. Connect terminals A and B with a jumper wire.

     Terminal A Battery positive terminal

     Terminal B Starter subharness 1P connector No. 1 (B)

Does the starter crank the engine?

YES : Check the following items in the order listed until you find the problem in the circuit:

GETtheMANUALS.org

NOTE: **After the problem in the circuit is found and repaired, select PCM reset See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS in the PGM-FI INSPECTION menu to cancel ALL INJECTORS STOP with the HDS.**

- Check for an open or short in the GRN wire and connectors between the starter cut relay, the ignition switch, and the under-hood fuse/relay box.
- Check for an open or short in the RED wire, BLK/WHT wire, and connectors between starter cut relay socket terminal No. 1 and the starter.
- Check for an open or short in the ORN wire, GRN wire, and connectors between the transmission range switch and the starter cut relay.
- Check for poor connections or loose terminals at the transmission range switch and ground G101.
- Check for a faulty ignition switch.
- Check for a faulty starter cut relay.
- Check for a faulty transmission range switch.

NO : Check for an open or short in the wire and connectors between the battery and the starter. Replace the starter, or remove and disassemble it, as necessary. Refer to **STARTER OVERHAUL** and **STARTER REMOVAL, INSTALLATION, AND PERFORMANCE TEST**.

NOTE: **After the problem in the circuit is found and repaired, select PCM reset See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS in the PGM-FI INSPECTION menu to cancel ALL INJECTORS STOP with the HDS.**

5. Starter test:
   - 1. Connect the alternator, regulator, battery, and starter tester to the battery.

NOTE: **The probe is used for starter testing.**

GETtheMANUALS.org

Fig. 4: Performing Starter Test Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 2. Do the STARTING TEST, check the cranking voltage and the current draw from the following service limit table.

Voltage (V)	Current (A)
8.5 or more	380 or less

Are the cranking voltage and the current draw within the service limits?

YES : Remove the starter, and inspect its drive gear and the torque converter ring gear for damage. Replace any damaged parts. Refer to **STARTER OVERHAUL** and **STARTER REMOVAL, INSTALLATION, AND PERFORMANCE TEST**.

NOTE: **After the problem in the circuit is found and repaired, select PCM reset See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS in the PGM-FI INSPECTION menu to cancel ALL INJECTORS STOP with the HDS.**

NO : Replace the starter, or remove and disassemble it. Refer to **STARTER OVERHAUL** and **STARTER REMOVAL, INSTALLATION, AND PERFORMANCE TEST**. Check for these problems:

NOTE: **After the problem in the circuit is found and repaired, select PCM reset See HOW TO TROUBLESHOOT THE A/T SYSTEM or HOW TO TROUBLESHOOT THE FUEL AND EMISSIONS SYSTEMS in the PGM-FI INSPECTION menu to cancel ALL INJECTORS STOP with the HDS.**

GETtheMANUALS.org

- **Drag in the starter armature**
- **Shorted armature winding**
- **Excessive drag in the engine**
- **Open circuit in the starter armature commutator segments**
- **Excessively worn starter brushes**
- **Open circuit in the starter brushes**
- **Dirty or damaged helical splines or drive gear**
- **Faulty overrunning clutch**

STARTER REMOVAL, INSTALLATION, AND PERFORMANCE TEST

REMOVAL

1. Battery Terminal - Disconnection
    1. Make sure the ignition switch is in LOCK (0).
    2. Disconnect and isolate the negative cable (A) from the battery.

    NOTE: Always disconnect the negative side first.

    3. Disconnect the positive cable (B) from the battery.

Fig. 5: Identifying Battery Negative And Positive Cables
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Vehicle Lift
    1. Raise the vehicle on a lift, and make sure it is securely supported.
3. Front Splash Shield

GETtheMANUALS.org

1. Remove the bolts (A), then remove the clips (B) that secure the front inner fender and the front splash shield (C) to the body.
2. From under the front bumper (D), remove the clips (E).
3. From under the body, remove the clips (F), then pull out the front splash shield.

Fig. 6: Identifying Front Splash Shield Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Starter
    1. Remove the starter bolts.

GETtheMANUALS.org

Fig. 7: Identifying Starter Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the cable and the connector.
3. Remove the starter.

Fig. 8: Identifying Starter, Cable And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TEST

1. Starter Performance - Test
    1. Clamp the starter firmly in a vise.
    2. Make the connections for this test using the thickest (gauge) wire possible (preferably the same gauge as used on the vehicle).

GETtheMANUALS.org

NOTE: **To avoid damaging the starter, never leave the battery connected for more than 5 seconds.**

3. Connect the battery as shown, and check for continuity between the B terminal and the starter body. If there is continuity, it is working properly.

Fig. 9: Checking Continuity Between B Terminal And Starter Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the battery from the starter body, and check for continuity between the B terminal and the starter body. If there is no continuity, it is working properly.

Fig. 10: Disconnecting Battery From Starter Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Connect the starter to the battery as shown, and confirm that the motor runs.
6. If the electric current meets the specification when the battery voltage is at 11.5 V, the starter is working properly.

Specification

Electric Current: 90 A or less

GETtheMANUALS.org

Fig. 11: Connecting Starter To Battery
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Starter
    1. Install the starter.
    2. Connect the cable, and the connector. Make sure the crimped side of the ring terminal faces away from the starter when you connect it.

Fig. 12: Identifying Starter Connector Mounting Bolt With Torque Specification
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the starter.

GETtheMANUALS.org

Fig. 13: Identifying Starter Connector Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Front Splash Shield
    1. Install the front splash shield (A), then install the bolts (B) and the clips (C, D). Make sure the clips snap into place securely.

GETtheMANUALS.org

Fig. 14: Identifying Front Splash Shield Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Battery Terminal - Reconnection

NOTE: If the battery performance is abnormal, test the battery.

1. Clean the battery terminals.
2. Connect the positive cable (A) to the battery.

NOTE: Always connect the positive side first.

3. Connect the negative cable (B) to the battery.
4. Apply multipurpose grease to the terminals to prevent corrosion.

GETtheMANUALS.org

Fig. 15: Identifying Battery Negative, Positive Cables And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Starter After Install - Check
    1. Start the engine to make sure the starter works properly.

STARTER OVERHAUL

VIEW

1. Starter Exploded View

    Exploded View

GETtheMANUALS.org

Fig. 16: Exploded View Of Starter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DISASSEMBLY

NOTE: Refer to the Exploded View if needed during this procedure.

1. Starter End Cover and Armature Housing
    1. Remove the end cover.

GETtheMANUALS.org

Fig. 17: Identifying Starter End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the armature housing.

Fig. 18: Identifying Armature Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Starter Armature
    1. Remove the armature.

Fig. 19: Identifying Armature

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Starter Armature - Inspection
    1. Inspect the armature for wear or damage from contact with the permanent magnet. If there is wear or damage, replace the armature.

Fig. 20: Identifying Starter Armature
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Check the commutator (A) surface. If the surface is dirty or burnt, resurface it with an emery cloth or a lathe to the specifications in step 3, or recondition with #500 or #600 sandpaper (B).

Fig. 21: Cleaning Commutator Surface Using Sandpaper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    3. Check the commutator diameter with a digital caliper or dial type caliper. If the diameter is below the service limit, replace the armature.

Commutator Diameter

Standard (New): 28.0-28.1 mm (1.102-1.106 in)

Service Limit: 27.5 mm (1.083 in)

GETtheMANUALS.org

Fig. 22: Checking Commutator Diameter Using Digital Caliper Or Dial Type Caliper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Measure the commutator (A) runout:
   - If the commutator runout is within the service limit, check the commutator for carbon dust or brass chips between the segments.
   - If the commutator runout is not within the service limit, replace the armature.

Commutator Runout

Standard (New): 0.02 mm (0.0008 in) max .

Service Limit: 0.05 mm (0.002 in)

Fig. 23: Measuring Commutator Runout Using Dial Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Use a digital caliper or dial type caliper to check the mica depth (A). If the mica depth is below the service limit, replace the armature.

Commutator Mica Depth

GETtheMANUALS.org

Standard (New): 0.40-0.50 mm (0.0157-0.0197 in)

Service Limit: 0.15 mm (0.0059 in)

Fig. 24: Identifying Mica Depth
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Use an ohmmeter to check for continuity between the segments of the commutator. If there is an open circuit between any of the segments, replace the armature.

Fig. 25: Checking Continuity Between Segments Of Commutator Using Ohmmeter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Place the armature (A) on an armature tester (B). Hold a hacksaw blade (C) on the armature core. If the blade is attracted to the core while the core is turned, the armature is shorted. Replace the armature.

GETtheMANUALS.org

Fig. 26: Checking Armature Short Circuit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Use an ohmmeter to check for continuity between the commutator (A) and the armature coil core (B), and between the commutator and the armature shaft (C). If there is continuity, replace the armature.

Fig. 27: Checking Continuity Between Commutator And Armature Coil Core Using Ohmmeter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Starter Brush Holder Assembly
    1. Remove the brush holder.

GETtheMANUALS.org

Fig. 28: Identifying Starter Brush Holder Assembly Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Starter Brush Holder - Test
    1. Check for continuity between the (+) brushes (A) and the (-) brushes (B). If there is continuity, replace the brush holder assembly.

Fig. 29: Identifying Brush Holder Assembly Brushes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Starter Brush - Inspection
    1. Measure the brush length. If it is shorter than the service limit, replace the brush holder assembly.

    Brush Length

    Standard (New): 11.1-11.5 mm (0.437-0.453 in)

GETtheMANUALS.org

Service Limit: 4.3 mm (0.169 in)

Fig. 30: Measuring Starter Brush Length Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Starter Planetary Gear - Inspection
    1. Check the planetary gears (A), the armature shaft gear (B), and the internal ring gear (C). Replace them if they are worn or damaged.

Fig. 31: Identifying Planetary Gears, Armature Shaft Gear And Internal Ring Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Starter Gear Cover
    1. Remove the ring gear holder.

GETtheMANUALS.org

Fig. 32: Identifying Starter Gear Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the switch plunger.

Fig. 33: Identifying Switch Plunger
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Starter Overrunning Clutch - Inspection
    1. Hold the drive gear (A), turn the gear shaft (B) counterclockwise. Check that the drive gear comes out to the other end. If the drive gear does not move smoothly, replace the gear cover set.
    2. Hold the drive gear, turn the gear shaft clockwise. The gear shaft should turn freely. If the gear shaft does not turn freely, replace the gear cover set.
    3. If the drive gear is worn or damaged, replace the overrunning clutch assembly; the gear is not available separately.

REASSEMBLY

NOTE: Refer to the Exploded View if needed during this procedure.

1. Starter Gear Cover
    1. Install the switch plunger.

Fig. 35: Identifying Switch Plunger
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the ring gear holder.

GETtheMANUALS.org

Fig. 36: Identifying Starter Gear Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Starter Brush Holder Assembly
    1. Install the brush holder.

Fig. 37: Identifying Starter Brush Holder Assembly Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Starter Armature
    1. Install the brush into the brush holder, and set the armature (A) in the brush holder (B).

NOTE: **To seat the new brushes, slip a strip of #500 or #600 sandpaper, with the grit side up, between the commutator and each brush, and smoothly turn the armature. The contact surface of the brushes will be sanded to the same contour as the commutator.**

    2. While squeezing a spring (C), insert it in the hole on the brush holder, and push it until it bottoms.

GETtheMANUALS.org

Repeat this for the other three springs (D, E, and F).

Fig. 38: Identifying Armature, Brush Holder And Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Starter End Cover and Armature Housing
    1. Install the armature housing.

Fig. 39: Identifying Starter End Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    2. Install the end cover.

SRS DTC TROUBLESHOOTING INDEX

SRS DTC	Detection Item
11-1x	Open in the driver's airbag first inflator
11-2x	Increased resistance in the driver's airbag first inflator
11-3x	Short to another wire or decreased resistance in the driver's airbag first inflator
11-4x	Open in the driver's airbag second inflator
11-5x	Increased resistance in the driver's airbag second inflator
11-6x	Short to another wire or decreased resistance in the driver's airbag second inflator
11-8x	Short to power in the driver's airbag first inflator
11-9x	Short to ground in the driver's airbag first inflator
11-Ax	Short to power in the driver's airbag second inflator
11-Bx	Short to ground in the driver's airbag second inflator
12-1x	Open in the front passenger's airbag first inflator
12-2x	Increased resistance in the front passenger's airbag first inflator
12-3x	Short to another wire or decreased resistance in the front passenger's airbag first inflator
12-4x	Open in the front passenger's airbag second inflator
12-5x	Increased resistance in the front passenger's airbag second inflator
12-6x	Short to another wire or decreased resistance in the front passenger's airbag second inflator
12-8x	Short to power in the front passenger's airbag first inflator
12-9x	Short to ground in the front passenger's airbag first inflator
12-Ax	Short to power in the front passenger's airbag second inflator
12-Bx	Short to ground in the front passenger's airbag second inflator
21-1x	Open in the driver's seat belt tensioner
21-2x	Increased resistance in the driver's seat belt tensioner
21-3x	Short to another wire or decreased resistance in the driver's seat belt tensioner
21-8x	Short to power in the driver's seat belt tensioner
21-9x	Short to ground in the driver's seat belt tensioner
22-1x	Open in the front passenger's seat belt tensioner
22-2x	Increased resistance in the front passenger's seat belt tensioner
22-3x	Short to another wire or decreased resistance in the front passenger's seat belt tensioner
22-8x	Short to power in the front passenger's seat belt tensioner
22-9x	Short to ground in the front passenger's seat belt tensioner
31-1x	Open in the driver's side airbag inflator
31-2x	Increased resistance in the driver's side airbag inflator
31-3x	Short to another wire or decreased resistance in the driver's side airbag inflator
31-8x	Short to power in the driver's side airbag inflator
31-9x	Short to ground in the driver's side airbag inflator

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead J 070AZ-SNAA100**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**

GETtheMANUALS.org

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 11-1x, 11-2x, 11-4x, or 11-5x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Driver's airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Remove the access panel (A) from the steering wheel, then disconnect the driver's airbag inflator 4P connector (B) on the cable reel harness.

GETtheMANUALS.org

Fig. 2: Disconnecting Driver's Airbag Inflator 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Connect the terminals of SRS simulator lead J to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead J to the driver's airbag inflator 4P connector on the cable reel harness.
- 5. Reconnect the negative cable to the battery.
- 6. **CLEAR THE DTCS WITH THE HDS** .
- 7. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 8. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 11-1x, 11-2x, 11-4x, or 11-5x indicated?

YES : Go to step 3.

NO : Open or increased resistance in the driver's airbag first or second inflator; **REPLACE THE DRIVER'S AIRBAG** , then clear the DTC.

3. Cable reel check:
   - 1. Turn the ignition switch to LOCK (0).

GETtheMANUALS.org

- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. **REMOVE THE COLUMN COVERS** .
- 4. Disconnect cable reel connector B (4P) on the dashboard wire harness.

Fig. 3: Disconnecting Cable Reel Connector B (4P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead J to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead J to cable reel connector B (4P) on the dashboard wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 11-1x, 11-2x, 11-4x, or 11-5x indicated?

YES : Go to step 4.

NO : Open or increased resistance in the cable reel; **REPLACE THE CABLE REEL** , then clear the DTC.

4. Open wire check (LA1+, LA1-, LA2+, LA2- lines):
   - 1. Turn the ignition switch to LOCK (0).

GETtheMANUALS.org

- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

SRS unit connector A (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead J. Do not disconnect SRS simulator lead J from cable reel connector B (4P) on the dashboard wire harness.
- 5. Measure the resistance of the test points.

Test condition IG LOCK (0)

Driver's airbag inflator 4P connector (on the cable reel harness): disconnected

Cable reel connector B (4P) (on the dashboard wire harness): disconnected

SRS unit connector A (39P): disconnected

Cable reel connector B (4P) (on the dashboard wire harness): connected to SRS simulator lead J

Test circuit LA1+, LA1-

Test point SRS simulator lead J black terminal

Test circuit LA2+, LA2-

Test point SRS simulator lead J red terminal

Fig. 4: Measuring Resistance Of Cable Reel Connector B (4P) On Dashboard Wire Harness Using Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GETtheMANUALS.org

Is there less than 1.0 ohms?

YES : The LA1+, LA1-, LA2+, LA2- wires are OK. Faulty SRS unit or poor connection at SRS unit connector A (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the dashboard wire harness.

NO : Open or increased resistance in the dashboard wire harness; replace the dashboard wire harness, then clear the DTC.

DTC 11-3X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO ANOTHER WIRE OR DECREASED RESISTANCE IN THE DRIVER'S AIRBAG FIRST INFLATOR; DTC 11-6X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO ANOTHER WIRE OR DECREASED RESISTANCE IN THE DRIVER'S AIRBAG SECOND INFLATOR

Is DTC 11-8x or 11-Ax indicated?

YES : Go to step 3.

NO : Short to power in the driver's airbag first or second inflator; **REPLACE THE DRIVER'S AIRBAG** , then clear the DTC.

GETtheMANUALS.org

3. Cable reel check:
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
    - 3. **REMOVE THE COLUMN COVERS** .
    - 4. Disconnect cable reel connector B (4P) on the dashboard wire harness.

Fig. 11: Disconnecting Cable Reel Connector B (4P)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

    - 5. Connect the terminals of SRS simulator lead J to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead J to cable reel connector B (4P) on the dashboard wire harness.
    - 6. Reconnect the negative cable to the battery.
    - 7. **CLEAR THE DTCS WITH THE HDS** .
    - 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
    - 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 11-8x or 11-Ax indicated?

YES : Go to step 4.

NO : Short to power in the cable reel; **REPLACE THE CABLE REEL** , then clear the DTC.

4. Shorted wire check (LA1+, LA1-, LA2+, LA2- lines to power):

GETtheMANUALS.org

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector A (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead J. Do not disconnect SRS simulator lead J from cable reel connector B (4P) on the dashboard wire harness.
- 5. Reconnect the negative cable to the battery.
- 6. Turn the ignition switch to ON (II).
- 7. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  Driver's airbag inflator 4P connector (on the cable reel harness): disconnected

  Cable reel connector B (4P) (on the dashboard wire harness): disconnected

  SRS unit connector A (39P): disconnected

  Cable reel connector B (4P) (on the dashboard wire harness): connected to SRS simulator lead J

  Test circuit LA1+, LA1-

  Test point 1 SRS simulator lead J black terminal

  Test point 2 Body ground

  Test circuit LA2+, LA2-

- **SRS Simulator Lead K 070AZ-SNAA200**
- **SRS Short Canceller 070AZ-SAA0100**

GETtheMANUALS.org

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See AIRBAG AND TENSIONER DISPOSAL or SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**
- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 21-1x or 21-2x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Driver's seat belt tensioner check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **Remove the left side B-pillar lower trim** See **INTERIOR TRIM REMOVAL AND INSTALLATION - CARGO AREA** , **INTERIOR TRIM REMOVAL AND INSTALLATION - PILLAR AREAS** or **INTERIOR TRIM REMOVAL AND INSTALLATION - TAILGATE AREAS** .
   - 4. Disconnect the driver's seat belt tensioner 4P connector (A) on the floor wire harness.

GETtheMANUALS.org

Fig. 30: Disconnecting Driver's Seat Belt Tensioner 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead K to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead K to the driver's seat belt tensioner 4P connector on the floor wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 21-1x or 21-2x indicated?

YES : Go to step 3.

NO : Open or increased resistance in the driver's seat belt tensioner; **REPLACE THE DRIVER'S SEAT BELT** , then clear the DTC.

3. Open wire check (LRP+, LRP- lines):

GETtheMANUALS.org

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. **CONNECT THE SRS SHORT CANCELLER TO SRS UNIT CONNECTOR B (39P) TERMINALS NO. 19 AND NO. 20** .
- 5. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  Driver's seat belt tensioner 4P connector (on the floor wire harness): disconnected

  SRS unit connector B (39P): disconnected

  Driver's seat belt tensioner 4P connector (on the floor wire harness): connected to SRS simulator lead K

  SRS unit connector B (39P) No. 19 and No. 20: connected to SRS short canceller

  Test circuit LRP+, LRP-

  Test point 1 SRS unit connector B (39P) No. 19

  Test point 2 SRS unit connector B (39P) No. 20

Fig. 31: Measuring Resistance Between SRS Unit Connector B (39P) No. 19 And 20
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 2.0 - 3.0 ohms?

YES : The LRP+, LRP- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P)

GETtheMANUALS.org

and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Open or increased resistance in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 21-3X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO ANOTHER WIRE OR DECREASED RESISTANCE IN THE DRIVER'S SEAT BELT TENSIONER

Fig. 32: SRS DTC Troubleshooting Flow Chart (21-3x)

- 5. Connect the terminals of SRS simulator lead K to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead K to the driver's seat belt tensioner 4P connector on the floor wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 21-3x indicated?

YES : Go to step 3.

NO : Short to another wire in the driver's seat belt tensioner; **REPLACE THE DRIVER'S SEAT BELT** , then clear the DTC.

3. Shorted wire check (LRP+ line to LRP- line):

GETtheMANUALS.org

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect SRS simulator lead K from the driver's seat belt tensioner 4P connector on the floor wire harness.
- 5. **CONNECT THE SRS SHORT CANCELLER TO SRS UNIT CONNECTOR B (39P) TERMINALS NO. 19 AND NO. 20** .
- 6. Measure the resistance between test points 1 and 2.

  Test condition IG LOCK (0)

  Driver's seat belt tensioner 4P connector (on the floor wire harness): disconnected

  SRS unit connector B (39P): disconnected

  SRS unit connector B (39P) No. 19 and No. 20: connected to SRS short canceller

  Test circuit LRP+, LRP-

  Test point 1 SRS unit connector B (39P) No. 19

  Test point 2 SRS unit connector B (39P) No. 20

Fig. 34: Measuring Resistance Between SRS Unit Connector B (39P) No. 19 And 20
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

YES : The LRP+, LRP- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P)

GETtheMANUALS.org

and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Short to another wire in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 21-8X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO POWER IN THE DRIVER'S SEAT BELT TENSIONER

GETtheMANUALS.org

- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Driver's seat belt tensioner check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **Remove the left side B-pillar lower trim** See **INTERIOR TRIM REMOVAL AND INSTALLATION - CARGO AREA** , **INTERIOR TRIM REMOVAL AND INSTALLATION - PILLAR AREAS** or **INTERIOR TRIM REMOVAL AND INSTALLATION - TAILGATE AREAS** .
   - 4. Disconnect the driver's seat belt tensioner 4P connector (A) on the floor wire harness.

GETtheMANUALS.org

Fig. 36: Disconnecting Driver's Seat Belt Tensioner 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead K to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead K to the driver's seat belt tensioner 4P connector on the floor wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 21-8x indicated?

YES : Go to step 3.

NO : Short to power in the driver's seat belt tensioner; **REPLACE THE DRIVER'S SEAT BELT** , then clear the DTC.

3. Shorted wire check (LRP+, LRP- lines to power):

GETtheMANUALS.org

- 1. Turn the ignition switch to LOCK (0).
- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect SRS simulator lead K from the driver's seat belt tensioner 4P connector on the floor wire harness.
- 5. Reconnect the negative cable to the battery.
- 6. Turn the ignition switch to ON (II).
- 7. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  Driver's seat belt tensioner 4P connector (on the floor wire harness): disconnected

  SRS unit connector B (39P): disconnected

  Test circuit LRP+

  Test point 1 SRS unit connector B (39P) No. 19

  Test point 2 Body ground

  Test circuit LRP-

  Test point 1 SRS unit connector B (39P) No. 20

  Test point 2 Body ground

- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**

GETtheMANUALS.org

- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 22-8x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Front passenger's seat belt tensioner check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. **Remove the right side B-pillar lower trim** See **INTERIOR TRIM REMOVAL AND INSTALLATION - CARGO AREA** , **INTERIOR TRIM REMOVAL AND INSTALLATION - PILLAR AREAS** or **INTERIOR TRIM REMOVAL AND INSTALLATION - TAILGATE AREAS** .
   - 4. Disconnect the front passenger's seat belt tensioner 4P connector (A) on the floor wire harness.

GETtheMANUALS.org

Fig. 48: Disconnecting Front Passenger's Seat Belt Tensioner 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 5. Connect the terminals of SRS simulator lead K to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead K to the front passenger's seat belt tensioner 4P connector on the floor wire harness.
- 6. Reconnect the negative cable to the battery.
- 7. **CLEAR THE DTCS WITH THE HDS** .
- 8. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 9. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 22-8x indicated?

YES : Go to step 3.

NO : Short to power in the front passenger's seat belt tensioner; **REPLACE THE FRONT PASSENGER'S SEAT BELT** , then clear the DTC.

GETtheMANUALS.org

3. Shorted wire check (RRP+, RRP- lines to power):
    - 1. Turn the ignition switch to LOCK (0).
    - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
    - 3. Disconnect the following connector.

      SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

    - 4. Disconnect SRS simulator lead K from the front passenger's seat belt tensioner 4P connector on the floor wire harness.
    - 5. Reconnect the negative cable to the battery.
    - 6. Turn the ignition switch to ON (II).
    - 7. Measure the voltage between test points 1 and 2.

      Test condition IG ON (II)

      Front passenger's seat belt tensioner 4P connector (on the floor wire harness): disconnected

      SRS unit connector B (39P): disconnected

      Test circuit RRP+

      Test point 1 SRS unit connector B (39P) No. 17

      Test point 2 Body ground

      Test circuit RRP-

      Test point 1 SRS unit connector B (39P) No. 18

      Test point 2 Body ground

Fig. 49: Measuring Voltage Between SRS Unit Connector B (39P) No. 17 And Body Ground

GETtheMANUALS.org

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 0.2 V?

YES : The RRP+, RRP- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

NO : Short to power in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 22-9X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO GROUND IN THE FRONT PASSENGER'S SEAT BELT TENSIONER

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Driver's side airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the driver's side airbag inflator 2P connector (A) on the floor wire harness.

GETtheMANUALS.org

Fig. 54: Disconnecting Driver's Side Airbag Inflator 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Connect the terminals of SRS simulator lead L to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead L to the driver's side airbag inflator 2P connector on the floor wire harness.
- 5. Reconnect the negative cable to the battery.
- 6. **CLEAR THE DTCS WITH THE HDS** .
- 7. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 8. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 31-1x or 31-2x indicated?

YES : Go to step 3.

NO : Open or increased resistance in the driver's side airbag inflator; **REPLACE THE DRIVER'S SIDE AIRBAG** , then clear the DTC.

3. Open wire check (LSA+, LSA- lines):
   - 1. Turn the ignition switch to LOCK (0).

GETtheMANUALS.org

- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead L. Do not disconnect SRS simulator lead L from the driver's side airbag inflator 2P connector on the floor wire harness.
- 5. Measure the resistance of the test point.

  Test condition IG LOCK (0)

  Driver's side airbag inflator 2P connector (on the floor wire harness): disconnected

  SRS unit connector B (39P): disconnected

  Driver's side airbag inflator 2P connector (on the floor wire harness): connected to SRS simulator lead L

  Test circuit LSA+, LSA-

  Test point SRS simulator lead L black terminal

Fig. 55: Measuring Resistance Of SRS Simulator Lead L Black Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The LSA+, LSA- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness.

GETtheMANUALS.org

NO : Open or increased resistance in the floor wire harness; replace the floor wire harness, then clear the DTC.

DTC 31-3X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO ANOTHER WIRE OR DECREASED RESISTANCE IN THE DRIVER'S SIDE AIRBAG INFLATOR

Fig. 56: SRS DTC Troubleshooting Flow Chart (31-3x)

- 5. Reconnect the negative cable to the battery.
- 6. **CLEAR THE DTCS WITH THE HDS** .
- 7. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 8. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 32-1x or 32-2x indicated?

YES : Go to step 3.

NO : Open or increased resistance in the front passenger's side airbag inflator; **REPLACE THE FRONT PASSENGER'S SIDE AIRBAG** , then clear the DTC.

3. Open wire check (RSA+, RSA- lines):
   - 1. Turn the ignition switch to LOCK (0).

GETtheMANUALS.org

- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead L. Do not disconnect SRS simulator lead L from the front passenger's side airbag inflator 2P connector on the floor wire harness or the front passenger's seat wire harness.
- 5. Measure the resistance of the test point.

  Test condition IG LOCK (0)

  Front passenger's side airbag inflator 2P connector (on the floor wire harness or the front passenger's seat wire harness): disconnected SRS unit connector B (39P): disconnected

  Front passenger's side airbag inflator 2P connector (on the floor wire harness or the front passenger's seat wire harness): connected to SRS simulator lead L

  Test circuit RSA+, RSA-

  Test point SRS simulator lead L black terminal

Fig. 67: Measuring Resistance Of SRS Simulator Lead L Black Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1.0 ohms?

YES : The RSA+, RSA- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE** . If the DTC does not clear, replace the floor wire harness or the front passenger's seat wire harness.

GETtheMANUALS.org

NO : Open or increased resistance in the floor wire harness or the front passenger's seat wire harness; replace the faulty harness, then clear the DTC.

DTC 32-3X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO ANOTHER WIRE OR DECREASED RESISTANCE IN THE FRONT PASSENGER'S SIDE AIRBAG INFLATOR

Fig. 68: SRS DTC Troubleshooting Flow Chart (32-3x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**
- **SRS Short Canceller 070AZ-SAA0100**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**
- **Before doing this troubleshooting procedure, review SRS PRECAUTIONS AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .**

GETtheMANUALS.org

- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 32-3x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Front passenger's side airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the front passenger's side airbag inflator 2P connector (A) on the floor wire harness or the front passenger's seat wire harness.

GETtheMANUALS.org

Fig. 69: Disconnecting Front Passenger's Side Airbag Inflator 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Connect the terminals of SRS simulator lead L to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead L to the front passenger's side airbag inflator 2P connector on the floor wire harness or the front passenger's seat wire harness.
- 5. Reconnect the negative cable to the battery.
- 6. **CLEAR THE DTCS WITH THE HDS** .
- 7. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 8. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 32-3x indicated?

YES : Go to step 3.

NO : Short to another wire in the front passenger's side airbag inflator; **REPLACE THE FRONT PASSENGER'S SIDE AIRBAG** , then clear the DTC.

3. Shorted wire check (RSA+ line to RSA- line):
   - 1. Turn the ignition switch to LOCK (0).

GETtheMANUALS.org

- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead L. Do not disconnect SRS simulator lead L from the front passenger's side airbag inflator 2P connector on the floor wire harness or the front passenger's seat wire harness.
- 5. **CONNECT THE SRS SHORT CANCELLER TO SRS UNIT CONNECTOR B (39P) TERMINALS NO. 3 AND NO. 4** .
- 6. Measure the resistance of the test point.

  Test condition IG LOCK (0)

  Front passenger's side airbag inflator 2P connector (on the floor wire harness or the front passenger's seat wire harness): disconnected SRS unit connector B (39P): disconnected

  Front passenger's side airbag inflator 2P connector (on the floor wire harness or the front passenger's seat wire harness): connected to SRS simulator lead L

  SRS unit connector B (39P) No. 3 and No. 4: connected to SRS short canceller

  Test circuit RSA+, RSA-

  Test point SRS simulator lead L black terminal

Fig. 70: Measuring Resistance Of SRS Simulator Lead L Black Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there an open circuit, or at least 1 Mohms?

GETtheMANUALS.org

YES : The RSA+, RSA- wires are OK. Faulty SRS unit or poor connection at SRS unit connector B (39P) and the SRS unit. Check the connection; if the connection is OK, **replace the SRS unit** See **SRS UNIT UPDATE** or **SRS UNIT REMOVAL AND INSTALLATION** . If the DTC does not clear, replace the floor wire harness or the front passenger's seat wire harness.

NO : Short to another wire in the floor wire harness or the front passenger's seat wire harness; replace the faulty harness, then clear the DTC.

DTC 32-8X ("X" CAN BE 0 THRU 9 OR A THRU F): SHORT TO POWER IN THE FRONT PASSENGER'S SIDE AIRBAG INFLATOR

Fig. 71: SRS DTC Troubleshooting Flow Chart (32-8x)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- **SRS Inflator Simulator 07SAZ-TB4011A**
- **SRS Simulator Lead L 070AZ-SNAA300**

NOTE:

- **Before doing this troubleshooting procedure, find out if the vehicle was in a collision. If so, verify that all the required components were replaced with new components, of the correct part number, and that they were properly installed See SRS COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT or AIRBAG AND TENSIONER DISPOSAL .**

GETtheMANUALS.org

AND PROCEDURES , GENERAL TROUBLESHOOTING INFORMATION , and BATTERY TERMINAL DISCONNECTION AND RECONNECTION .

- **Before replacing the SRS unit, check the SRS unit software version with the HDS. If the software version is not the latest, update the SRS unit software See SRS UNIT REMOVAL AND INSTALLATION or SRS UNIT UPDATE , and retest.**

DTC Description	DTC

1. Problem verification:
   - 1. **CLEAR THE DTCS WITH THE HDS** .
   - 2. Turn the ignition switch to ON (II), then wait for 10 seconds.
   - 3. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 32-8x indicated?

YES : The failure is duplicated. Go to step 2.

NO : Intermittent failure, the system is OK at this time. **GO TO TROUBLESHOOTING INTERMITTENT FAILURES** . If another DTC is indicated, troubleshoot the DTC.

2. Front passenger's side airbag inflator check:
   - 1. Turn the ignition switch to LOCK (0).
   - 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
   - 3. Disconnect the front passenger's side airbag inflator 2P connector (A) on the floor wire harness or the front passenger's seat wire harness.

GETtheMANUALS.org

Fig. 72: Disconnecting Front Passenger's Side Airbag Inflator 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- 4. Connect the terminals of SRS simulator lead L to the SRS inflator simulator (2 ohms connectors), then connect SRS simulator lead L to the front passenger's side airbag inflator 2P connector on the floor wire harness or the front passenger's seat wire harness.
- 5. Reconnect the negative cable to the battery.
- 6. **CLEAR THE DTCS WITH THE HDS** .
- 7. Turn the ignition switch to ON (II), then wait for 10 seconds.
- 8. **CHECK FOR DTCS WITH THE HDS** .

DTC Description	DTC

Is DTC 32-8x indicated?

YES : Go to step 3.

NO : Short to power in the front passenger's side airbag inflator; **REPLACE THE FRONT PASSENGER'S SIDE AIRBAG** , then clear the DTC.

3. Shorted wire check (RSA+, RSA- lines to power):
   - 1. Turn the ignition switch to LOCK (0).

GETtheMANUALS.org

- 2. Disconnect the negative cable from the battery, then wait at least 3 minutes.
- 3. Disconnect the following connector.

  SRS unit connector B (39P) See **SRS UNIT REMOVAL AND INSTALLATION** or **SRS UNIT UPDATE**

- 4. Disconnect the SRS inflator simulator from SRS simulator lead L. Do not disconnect SRS simulator lead L from the front passenger's side airbag inflator 2P connector on the floor wire harness or the front passenger's seat wire harness.
- 5. Reconnect the negative cable to the battery.
- 6. Turn the ignition switch to ON (II).
- 7. Measure the voltage between test points 1 and 2.

  Test condition IG ON (II)

  Front passenger's side airbag inflator 2P connector (on the floor wire harness or the front passenger's seat wire harness): disconnected SRS unit connector B (39P): disconnected

  Front passenger's side airbag inflator 2P connector (on the floor wire harness or the front passenger's seat wire harness): connected to SRS simulator lead L

  Test circuit RSA+, RSA-

  Test point 1 SRS simulator lead L black terminal

  Test point 2 Body ground
